PRODUCT SERIES INDEX

PRODUCT SERIES	DESCRIPTION	PAGE
AUDIO TRANSFORMERS AND INDUCTORS		
Product Selection Guide 2		
MILITARY TYPES: GRADE 4, METAL ENCASED		
BIT-250	Transistor and flat pack styles	3
DI-T	Ultraminiature transformers and inductors	6
DI-T200	Plug-in ultraminiature transformers and inductors	7
DO-T	Ultraminiature transformers and inductors	4, 5
DO-T200	Plug-in, ultraminiature transformers and inductors	7
FHA	Low profile audio transformers	12
FHI	Low profile inductors	12
H	Transformers and inductors. Full line. Hermetically sealed, metal encased	13, 14
PIL	Ultraminiature transistor style units	10
W	Military Standards	11
MILITARY TYPES: GRADE 5, MOLDED		
SO-P	Molded transformers	15, 18, 19
SSO-P	Molded transformers	15, 20-22
INDUSTRIAL TYPES: CASED, NON-HERMETIC		
A	Ultra compact wideband transformers and inductors	24, 25
CAT	High copper efficiency for transistor use	30
CG	High quality transformers	30
HA	Excellent quality audio transformers	28, 29
I-DI-T	Industrial version of Std. DI-T types	8, 9
I-DO-T	Industrial version of Std. DO-T types	8, 9
LAB	Highest quality for laboratory circuit development	11
LS	Hi-fidelity, highest quality. Broadcast types	26, 27
O	Compact audio transformers and inductors	15, 16, 17
P	Octal socket plug-in types	10
S	Popular priced series	31
FCT	Ferrite core transformers	23
INDUSTRIAL TYPES: OPEN FRAME, NON-HERMETIC		
SO	Flexible lead types	15, 18, 19
SSO	Flexible lead types	15, 20-22
PC-O	Plug-in types	15, 16, 17
PC-SO	Plug-in types	15, 18, 19
PC-SSO	Plug-in types	15, 20-22
POWER TRANSFORMERS AND INDUCTORS		
General Information 33		
Product Selection Guide 32		
MILITARY TYPES		
DO-T400	Ultraminiature power transformers	41
H	Hermetically sealed inductors, Grades 4 and 5.....	13, 14
H	Hermetically sealed transformers, Grades 4 and 5	36-44
HIT	Ultra-shielded power line isolation transformers	44
MET	For 400 Hz application	36, 37, 41
N	Military Standard transformers	45
NV	Miniature inverter transformers	38
SRC	Precision Scott-T reference	44
Z	Military Standard inductors	45
INDUSTRIAL AND COMMERCIAL TYPES		
A	Ultra compact	24, 25
CG	Transformers and inductors. High quality transistor, filament and plate types	46
FT	Channel frame, filament/transistor transformers	48
HP	Pre-amplifier or tuner power supply transformers	29
PF	For photoflash and similar applications	49
R	Replacement type inductors	48, 49
R	Replacement type line adjusting and isolation transformers	48, 49
S	Popular-priced series transformers and inductors	47
SC	Signaling and control transformers	49
TP	Three phase	35
MAGNETIC AMPLIFIERS		
MAS	High gain, solid state push pull types	39
MAT	For servo motors and other applications	39
PULSE TRANSFORMERS		
General Information 50		
Product Selection Guide 50		
BIT-P	Metal encased transistor and flat pack types	51
H	Molded: Tube types, transistor types	53, 54
PIP	Metal encased transistor types	52

PRODUCT SERIES	DESCRIPTION	PAGE
HIGH Q INDUCTORS		
General Information 56		
Product Selection Guide 57		
ALL MIL EXCEPT VIC AND DI		
HIGH Q INDUCTORS — FIXED		
FE	Toroidal, molded	60
FI	Toroidal, molded	60
FO	Toroidal, molded	60
HQA	Toroidal, metal encased	66
HQB	Toroidal, metal encased	66
HQC	Toroidal, metal encased	66
HQE	Toroidal, metal encased	66
MH	Toroidal, molded	59
ML	Laminated, shielded	58
MM	Toroidal, molded	59
MO	Laminated, molded	58
MQA	Toroidal, metal encased	62
MQB	Toroidal, metal encased	63
MQD	Toroidal, metal encased	61
MQE	Toroidal, metal encased	63
MQL	Laminated, metal encased	61
MQM	Laminated, metal encased	61
MS	Toroidal, molded	59
MW	Toroidal, molded	59
TQA	Same as MQA, but centertapped	62
HIGH Q INDUCTORS — VARIABLE		
HVC	Wide range, +200%, -70% of nominal value	64
HVV	Vernier, narrow range $\pm 10\%$ of nominal value	64
TVC	Same as HVC, but centertapped	64
VIC	+85%, -45% of nominal value	65
DI	Inductance decades	65
ELECTRIC WAVE FILTERS		
General Information 68, 69		
Product Selection Guide 67		
BAND PASS		
BMI	Miniature metal cased. Center frequency range 30 Hz to 10 kHz	74
BML	Similar to BMI. Center frequency range 400 Hz to 1 KHz	74
BPH	Ultra miniaturized metal cased, pin terminals. Center frequency range 50 kHz to 100 kHz	72
BPM	Ultra miniaturized metal cased, pin terminals. Center frequency range 400 Hz to 20 KHz	72
BTI	Similar to BMI. Center frequency range 60 Hz to 120 Hz	74
FBH	Flat construction, high frequency	70
LBP	Low Frequency	77
MNF	Ultraminiature telemetering metal cased, epoxy terminal board. Band Width $\pm 7.5\%$	71
MWF	Similar to MNF except Band Width $\pm 15\%$	71
PLP	400 Hz line	77
TGR	Telegraph Tone Channel Receiving	78
TGT	Telegraph Tone Channel Transmitting	78
TMN	Miniature Telemetering metal cased. Band Width $\pm 7.5\%$	71
TMW	Similar to TMN except Band Width $\pm 15\%$	71
BAND REJECT		
BPM	Ultra miniaturized metal cased, pin terminals. Center frequency range 400 Hz to 20 kHz	72
LBP	Low Frequency	77
LOW PASS		
FLH	Flat construction, metal cased with pin terminals. Cutoff frequency range 600 Hz to 5 kHz	70
FLL	Flat construction, metal cased. Cutoff frequency 3500 Hz to 50 kHz	70
LLP	Low frequency metal cased. Cutoff frequency range 10 Hz to 15 Hz	77
LMI	Miniaturized metal cased. Cutoff frequency range 100 Hz to 10 kHz	75
LML	Miniaturized metal cased. Cutoff frequency range 1000 Hz to 12 kHz	75
LPM	Ultra miniaturized metal cased with pin terminals. Cutoff frequency range from 200 Hz to 15 kHz	73
PLF	400 Hz line	77
HIGH PASS		
FHH	Flat construction, metal cased with pin terminals. Cutoff frequency 200 Hz	70
HMI	Miniaturized metal cased. Cutoff frequency range 50 Hz to 3 kHz	76
HML	Miniaturized metal cased. Cutoff frequency range 200 Hz to 1 kHz	76
HPM	Ultra miniaturized metal cased with pin terminals. Cutoff frequency range 500 Hz to 4 kHz	73

STANDARD AUDIO TRANSFORMER AND INDUCTOR SELECTION GUIDE

Product Series	Description	Weight	Size (Inches) (Nominal)	Freq. Range	Max. Power	Page
MILITARY TYPE: GRADE 4, METAL ENCASED						
BIT-250	Ribbon style Kovar leads; compatible with transistor and IC flat pack styles. Transformers and inductors.	.04 oz	1/4 d x 1/4 h	300 Hz to 250 kHz	80 mW @ 1 kHz	3
DO-T	Flexible 1 1/2" Dumet leads, Goldplated. Ultraminiature transformers and inductors for transistor circuitry.	1/10 oz	5/16 d x 1 3/2 h	300 Hz to 20 kHz	500 mW @ 1 kHz	4, 5
DO-T200	Plug-in — TO-5 pattern. Ultraminiature transformers and inductors for transistor style circuitry.	1/8 oz	.350 d x 5/16 h	300 Hz to 20 kHz	100 mW @ 1 kHz	7
DI-T	Flexible 1 1/2" Dumet leads, Goldplated. Ultraminiature transformers and inductors for transistor circuitry.	1/15 oz	5/16 d x 1/4 h	400 Hz to 100 kHz	500 mW @ 1 kHz	6
DI-T200	Plug-in — TO-5 pattern. Ultraminiature transformers and inductors for transistor circuitry.	1/15 oz	5/16 d x 3/8 h	400 Hz to 100 kHz	500 mW @ 1 kHz	7
PIL	Ultra miniature transistor style unit. Flexible lead bundles, copper, tinned material. Transformers and inductors.	1/20 oz	33/64 d x 1/4 h	800 Hz to 250 kHz	100 mW @ 1 kHz	10
H	Transformers —Full line of input, interstage and output types for transistor and tube use. Chopper type transformers. Inductors —range from .4 mhys to 450 hys.	.8 oz to 1 lb	1 1/6 x 1/2 x 2 9/32 h to 1 13/16 x 1 13/16 x 2 1/2 h	30 Hz to 20 kHz	1 mW to 10 mW	13, 14
FHA	Low profile audio unit, straight 1" pin terminals for plug-in mounting.	.8 oz	23/32 x 27/32 d x 5/16 h	300 Hz to 20 kHz	100 mW @ 300 kHz	12
FHI	Low profile inductor, straight pin terminal for plug-in use. 15 mhys to 2.4 hys.	.8 oz	23/32 x 27/32 d x 5/16 h	15 Mhy-64 maDC to 2.4 Hys-2 maDC		12
W (Mil Std)	Qualified to Mil Stds. print No.'s MS 90000-1 to 90008-1. Inputs, interstage and output types.	.6 lbs	1 5/8 sq x 2 3/8 h	300 Hz to 10 kHz	2 W @ 300 Hz	11
MILITARY TYPE: GRADE 5, MOLDED						
SSO-P	Transistor and tube type transformers. Input, interstage, output and inductors.	.04 lbs	3/4 x 7/8 x 5/16 h	300 Hz to 20 kHz	100 mW @ 300 Hz	15, 20-22
SO-P	Transistor and tube type transformers. Input, interstage, output and inductors.	.05 lbs	3/4 x 1 x 23/32 h	200 Hz to 20 kHz	250 mW @ 200 Hz	15, 18, 19
INDUSTRIAL TYPE: CASED, NON-HERMETIC						
I-DI-T	Industrial versions of std. DI-T and DO-T types.	1/8 oz	25/64 dia max x 11/32 max h	400 Hz to 100 kHz	500 mW	8, 9
I-DO-T			25/64 dia max x 1/2 max h	300 Hz to 20 kHz	500 mW	8, 9
O	Excellent quality compact audio transformers and inductors, full range of transistor and tube applications.	1 oz	7/8 d x 1 5/16 h	300 Hz to 20 kHz	1 Watt	15, 16, 17
FCT	Ferrite core, wideband transformers suitable for audio and pulse applications.	1/4 oz	.635 sq x .600 h	20 Hz to 100 kHz (min)	20 mW	23
P	Octal socket plug-in style unit. Tube application type.	2 oz	1 3/32 d x 1 15/32 h	300 Hz to 20 kHz	-8 DBM 6.3 mW	10
A	Ultra compact wideband transistor and tube type transformers and inductors, hybrids and choppers.	1/2 lb	1 1/2 sq x 2 h	10 Hz to 50 kHz	5 Watt	24, 25
LS	Linear standard transformers. Hi-fidelity, highest quality. Tube and transistor types. Includes low dist. high efficiency, shielded types, hybrid transformers. Broadcast quality.	3 lbs to 520 lbs	2 5/8 x 3 1/8 x 3 1/4 h to 13 x 15 3/4 x 28 h	7 Hz to 50 kHz	Low level to 2.5 KW	26, 27
HA	Excellent quality audio transformers for mixing, matching and tube application. Many units are of hum-bucking construction.	2 lbs to 5 lbs	1 15/16 x 2 3/8 x 3 1/8 h to 2 13/16 x 3 5/16 x 3 1/2 h	20 Hz to 50 kHz	+18 dbm to 20 W	28, 29
CG	High quality transformers for mixing, matching and tube circuit applications.	1/4 lb to 82 lbs	1 5/8 sq x 2 1/4 h to 7 x 12 x 9 h	40 Hz to 15 kHz	+28 dbm to 600 W	30
CAT	High quality transformers designed with high copper efficiency for transistor use.	.5 lbs	1 5/8 sq x 2 1/4 h	50 Hz to 15 kHz	5 W	30
S	Popular priced special series of transformers and inductors.	1 lb to 52 lbs	1 3/4 sq x 2 15/16 h to 7 3/8 x 9 1/4 x 10 1/4 h	100 Hz to 10 kHz	0 dbm 250 W	31
LAB	Highest quality transformers designed for laboratory circuit development investigation. Input, interstage and output transformers terminated with solderless lugs for a multiplicity of connections for design aid use.	3 lbs to 15 lbs	3 1/8 x 3 5/8 x 3 1/4 h to 5 1/16 x 5 x 4 1/16 h	20 Hz to 20 kHz	50 mW to 50 W	11
INDUSTRIAL TYPES: OPEN FRAME, NON-HERMETIC						
SSO	Flexible lead type transformers and inductors for tube and transistor application. Channel frame available.	.02 lbs	43/64 x 3/4 x 7/16 h	300 Hz to 20 kHz	100 mW	15, 20-22
SO	Small, broadband type, flexible lead type. Transistor and tube types. Channel frame available.	.03 lbs	23/32 x 7/8 x 1 1/32 h	200 Hz to 20 kHz	250 mW	15, 18, 19
PC	Plug-in types for mtg. on P.C. boards. Same electrical characteristics as std. ouncer, sub-ouncer and sub-sub-ouncer lines.	.03 lbs	PC-0: 1.0 x .774 x .75 h PC-SO: .75 x .40 x 3 1/32 h PC-SSO: 3/4 x .40 x 1/2 h	100 Hz to 20 kHz 200 Hz to 20 kHz 300 Hz to 20 kHz	1 W 250 mW 100 mW	15-22 15-22 15-22

THE BIT-250™ LINE A COMPLETELY NEW DEVELOPMENT IN TRANSFORMER TECHNOLOGY

PACKAGING Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions, and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

RELIABILITY Cylindrical bobbin-winding techniques eliminate corner stress normally found in fine-wire windings of conventional rectangular structures.

Lead arrangements and terminations have been designed to maximum reliability under thermal shock and temperature cycling.

FLEXIBILITY The stock units shown on facing page are designed to afford maximum flexibility of application.

Transformers are 7-terminal types, with center-tapped primaries and split secondaries. When connected in parallel, split-winding secondaries provide $\frac{1}{4}$ the impedance and twice the DC current capability as series connections.

Inductors in the stock line include both single-winding and split-winding types.

SPECIALS BIT-250's not found in the stock line will be designed to customer's requirements:

- Special electrical parameters
- 10 or more leads
- Operation to 130°C per MIL Class S.

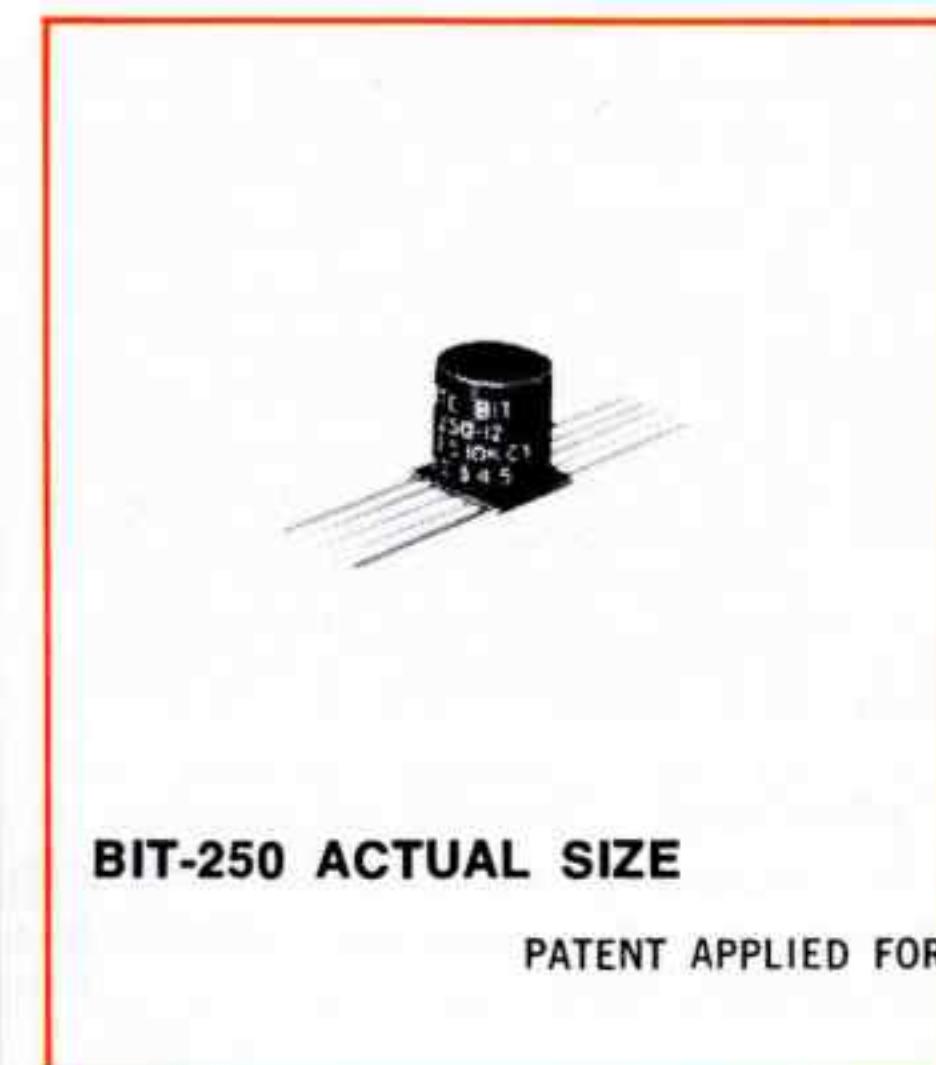

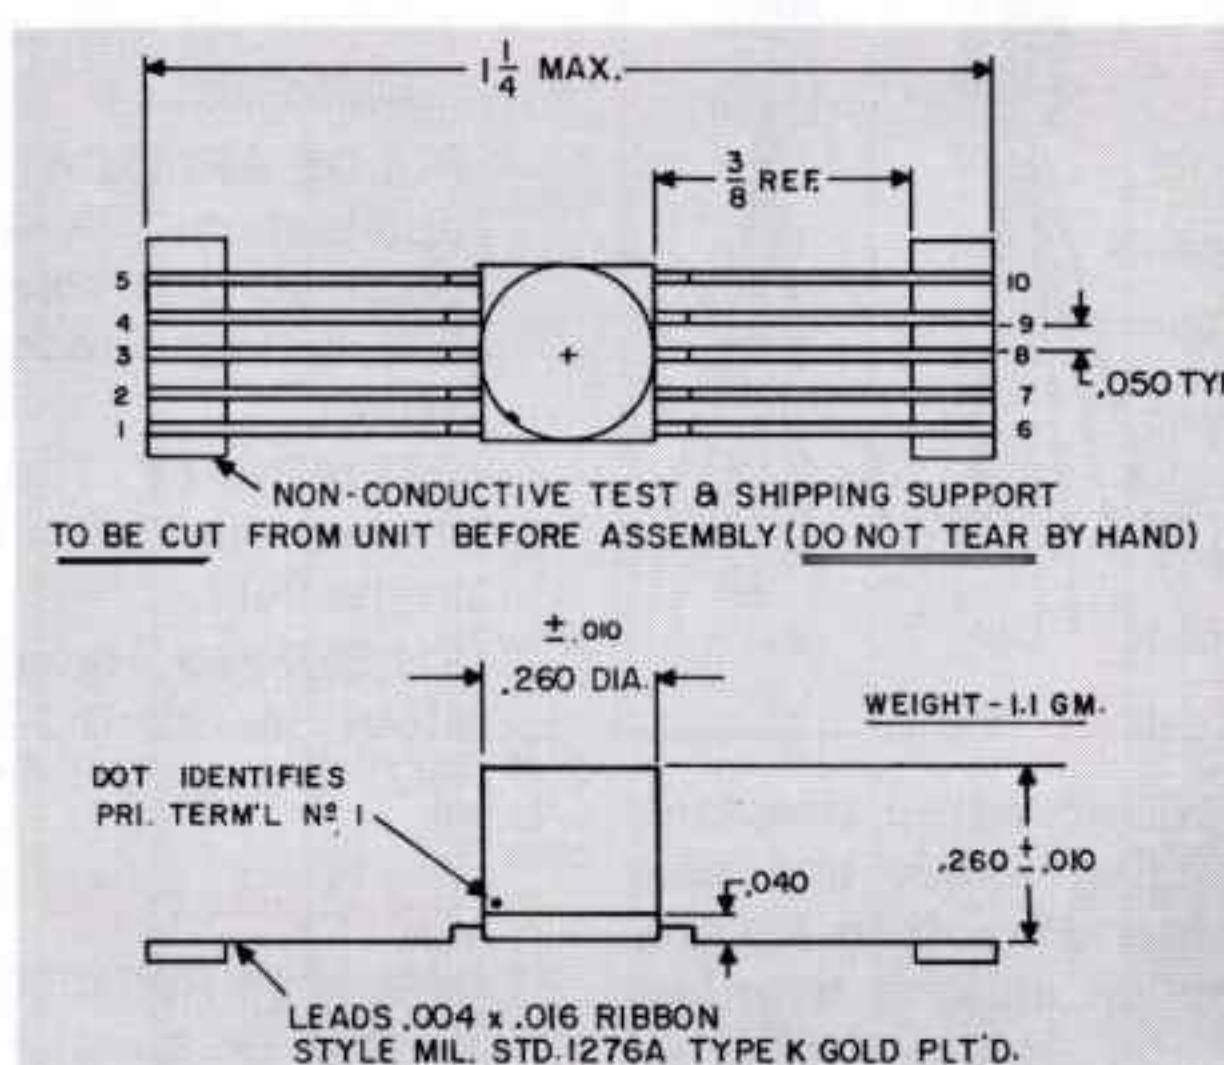

BIT-250'S

ASSEMBLED WITH FLAT PACK IC's
ON PRINTED BOARD

NOTES:

- **FREQUENCY RESPONSE** ± 2 db, 300 Hz — 250,000 Hz, @ 1 MW Ref. level.
- **DIELECTRIC STRENGTH** tested @ 200 V RMS.
- **MIL SPECS** To complete MIL-T-27C Specs. Metal encased, ruggedized, Grade 5, Class R, Life X. See pages 79, 80.
- **SHIELDING** All units electromagnetically self-shielded.
- **LEAD MATERIAL** Gold-plated ribbon-style Kovar, solderable and weldable — MIL-STD-1276, Type K.

DO-T® TRANSISTOR TRANSFORMERS AND INDUCTORS

U.S. PAT. NO. 2,949,591 OTHERS PENDING

PACKAGING Hermetically sealed. A UTC pioneered structure. The bobbin is completely rigid eliminating stress and wire movement. The turns are circular in shape rather than square, eliminating turn corner stress and effecting uniform wire lay. No tapes are employed in connecting coil wire and external leads. They are rigidly anchored in secure terminal board fashion providing strain relief.

The leads used on the stock DO-T transformers are insulated solid .016 diameter Dumet leads. For plug-in type see page 7.

MIL SPECS To complete MIL-T-27C Specs. Units are fully ruggedized, hermetically sealed, metal cased to MIL Grade 5, Class R, Life X. See pages 79, 80.

ALTITUDE 150,000 ft. max.

PERFORMANCE The radically designed UTC DO-T Family (see pages 4 thru 9) transistor transformers provide unprecedented power handling capacity and reliability, coupled with small size. Electrical parameters and areas of application exceed conventional transformer capabilities.

Curves on this and on pages 6 and 7 indicate their performance compared to that of similar size units now on the market. These curves show representative performance of all DO-T's and DI-T's except 200,000 ohm units. Higher performance is obtained when used in push-pull with balanced DC. Other manufacturers' comparative performance is shown on these curves to put unjustified claims in perspective. For example, the UTC DO-T10 delivers 100 mw @ 5% distortion @ 300 Hz. **Identical measurements** were made on contemporary manufacturers' equivalent, rated at 50 mw @ 300 Hz. Actual delivered power was under 1 mw @ 7½ % distortion @ 300 Hz.

FREQUENCY RESPONSE ±3 db, 300 Hz to 20 kHz at 1 mw.

WORKNG VOLTAGE 50 volts peak.

APPLICATION Units can be used for different impedances from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve hum bucking response and level ratings . . . higher source will reduce them. Units may be used reversed, input to secondary. The frequency response curve on this page is shown to 20 kHz. This descriptive curve is not meant to be restrictive. Units can be used at

frequencies well above 20 kHz. Satisfactory applications for frequencies up to and above 100 kHz have been developed.

PULSE APPLICATION In pulse coupling impedance matching applications, (when measured with a 30 microsecond input pulse voltage wave), typical values for these transformers are: 5% or less droop, zero overshoot and less than 10% back-swing.

RELIABILITY The exceptional reliability of DO-T family units, inherent in their unique structure, has been dynamically proven in the field.

SHIELDING Hipermalloy electromagnetic shield available from stock for all DO-T family units except PIL. Order UTC P/N DOT-SH, or DIT-SH.

DILESIL High Reliability DO-T Family Transformer

- A High Reliability version of the DO-T and DI-T line is available on special order. This alternate construction is designated DILESIL.
- DILESIL construction is intended for fine wire DO-T, DI-T transformers which are used in environments that produce prolonged thermal stress, far exceeding the thermal cycling specification requirements of MIL-T-27.
- DILESIL DO-T's have been approved and qualified by the Defense Electronic Supply Command and appear on QPL-27.
- DILESIL construction is recommended for applications requiring extreme reliability under thermal stress. Thousands of these parts have been used in Hi-Rel Military and NASA applications for the past seven years.
- DILESIL DO-T and DI-T transformers are electrically identical to standard DO-T and DI-T parts. However, DILESIL parts are slightly larger than equivalent DO-T and DI-T parts.
- Contact the UTC engineering department for more detailed information.

SPECIALS For indication of possibilities of DO-T Family units custom built to your special requirements, contact the UTC Engineering Department.

The stock DO-T Family are Grade 5, Class R units, for a maximum operating temperature of 105°C in accordance with MIL-T-27C Specs. On special order they can be designed to Class S requirements of MIL-T-27C (130°C maximum operating temperature). No additional life expectancy is gained by ordering Class S insulation systems for applications in the vicinity of Class R temperatures. Where the operating temperatures are above 105°C, the use of Class S insulations will afford greater life expectancy.

Special units with electrical modifications of changed lead lengths, modified impedance ratios, and additions of electrostatic shields, etc., are available for all DO-T Family units.

Stock units cover general purpose applications. For specific applications cost reductions may be effected.

INDUCTOR DO-T™ LISTING

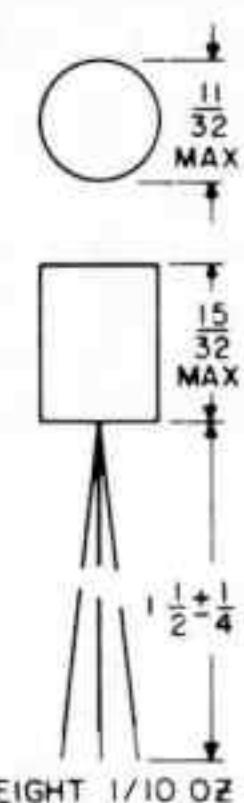

Type No.	MIL Type		
DO-T50 (2 Wdg.)	TF5RX20ZZ	Series connection: .075 Hy @ 10 ma DC, .06 Hy @ 30 ma DC, DCR 10.5 ohms Parallel connection: .018 Hy @ 20 ma DC, .015 Hy @ 60 ma DC, DCR 2.6 ohms

DO-T200 AND DI-T200 SERIES TRANSFORMERS AND INDUCTORS

U.S. PAT. NO. 2,949,591: OTHERS PENDING.

PACKAGING Metal encased. DO-T family unit. See page 4.**MIL SPECS** To complete MIL-T-27C Specs. Ruggedized, metal encased to MIL Grade 5, Class R, Life X. See pages 79, 80.**FREQUENCY RESPONSE** At 1 mw ± 3 db, 300 Hz to 20 kHz, DO Type; ± 3 db, 400 Hz to 100 kHz, DI Type.**TERMINALS** Leads are .016 Dumet wire, gold plated, and may be either welded or soldered. They are uninsulated and are spaced on a .1" radius circle, conforming to the termination pattern of the "TO-76" cased semiconductors and micrologic elements.

TEMPERATURE RANGE Maximum operating temperature is +85°C.

SHIELDING Hipermalloy electromagnetic shield is available from stock for all I-DO-T and I-DI-T units.

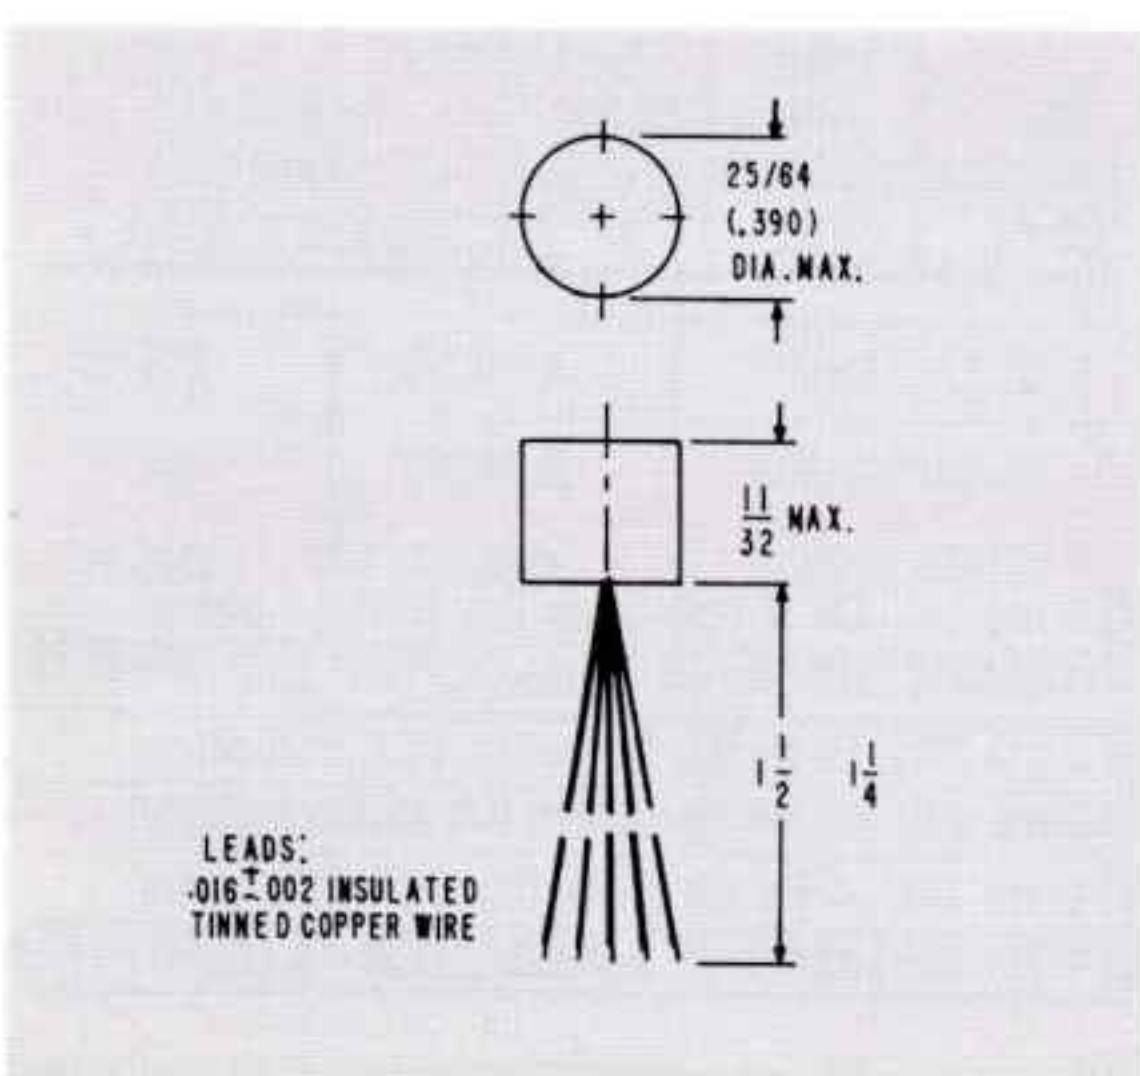

PERFORMANCE In power handling capability and reliability coupled with small size, I-DO-T and I-DI-T transformers are unprecedented for industrial use. Electrical parameters and areas of application exceed conventional transformer capabilities.

PIL® ULTRAMINIATURE AUDIO TRANSFORMERS AND INDUCTORS

PACKAGING DO-T family unit (except solid, tinned copper insulated leads). See page 4.

MIL SPECS To complete MIL-T-27C Specs. Ruggedized, metal encased to MIL Grade 5, Class R, Life X. See pages 79, 80.

FREQUENCY RESPONSE At 1 mw, ± 3 db, 800 Hz to 250 kHz.

SPECIALS Plug-in PIL available on special order. Maximum dimensions: 0.390" diameter x 0.350" high. For terminal arrangement see DI-T200, page 7.

		Parallel	.16	Hy @ 0 ma DC	.12	Hy @ 5 ma DC	DCR 75 ohms

* For 5% maximum distortion @ 10 kHz.

ma DC shown is for single ended usage. For push-pull, ma DC can be any balanced value taken by .5W transistors. Where windings are listed as split, $\frac{1}{4}$ of the listed impedance is available by paralleling the winding.

PLUG-IN TYPES

PACKAGING Fully impregnated and sealed in submersion proof bakelite housing. P-16 steel case contains high permeability magnetic shields.

TERMINALS Fits standard plug-in octal socket. P-16 fits standard plug-in 9-pin socket.

CURVES "O" and "P" units have same electrical parameters for similar part numbers. See page 17.

PLUG-IN CASE

Diameter..... 1 3/32"
Height 1 15/32"
Socket Std. Oct.
Weight..... 2 oz.

P-16 CASE

Diameter..... 1 3/16"
Height 2 3/4"
Weight..... 4 oz.

CIRCUIT DEVELOPMENT TRANSFORMERS FOR TRANSISTORS — LAB™ SERIES

CASE SIZES
LAB-5 &
LAB-10 units in
 LS-1 case
LAB-20 units in
 LS-3 case
 Terminal board
 as shown above

The UTC LABoratory circuit development transformers aid the designer in selecting optimum impedances for power and distortion from his transistor circuit. The input, interstage, and output transformers listed below are arranged for a multiplicity of impedance connections. Once the best selection of impedance is found, special or stock items are easily substituted. The LAB development units, representing extremely high efficiency, very wide band, high powered transformers, will usually be substantially larger and heavier than the transformers which replace them, since the designer will not need the full frequency range or maximum level afforded. Solderless connection terminals are used to facilitate reconnecting for various impedances. Terminals are arranged so that shortest possible jumpers are always used regardless of impedance values desired.

LAB-5
 20 Hz to 20 kHz
 Up to 50 mw Continuous

Pri. Imp. Ω	Sec. Imp. Ω
125	125
200 split	200 split
500 split	500 split
2000 split	2000 split

This unit contains high electrostatic shielding, multiple magnetic shielding and is constructed with humbucking balanced core and windings.

LAB-10
 20 Hz to 20 kHz
 Up to 1 W Continuous

Pri. Imp. Ω Range	Pri. to Sec. Ratio	Sec. Imp. Ω Range
1900 Ω to 14,400 Ω	20:1 or 10:1	19 Ω to 36 Ω
925 Ω to 7600 Ω	10:1 or 5:1	37 Ω to 76 Ω

Primary and Secondary can be arranged for split, single ended or push-pull connections. Primary up to 50 ma DC unbalanced with full range response.

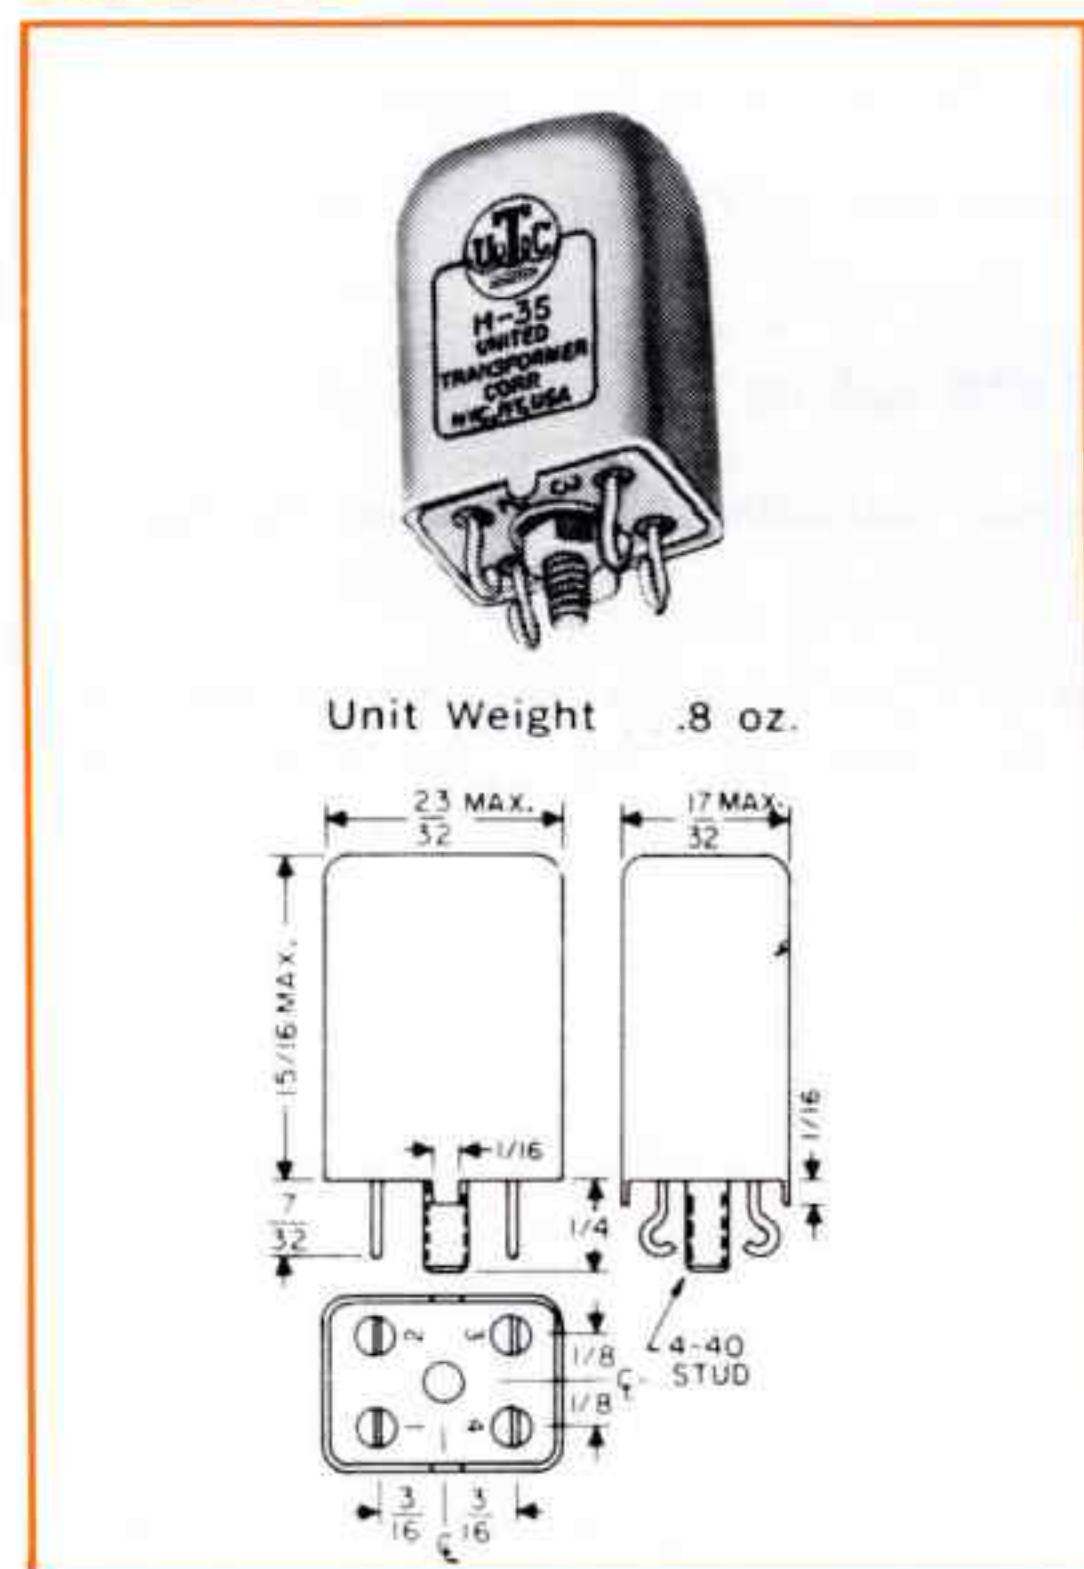

LAB-20
 20 Hz to 20 kHz
 Up to 50 W Continuous

Pri. Imp. Ω	Sec. Imp. Ω
6, 12,	4, 8,
24, 40,	16, 64
54, 70,	
96	

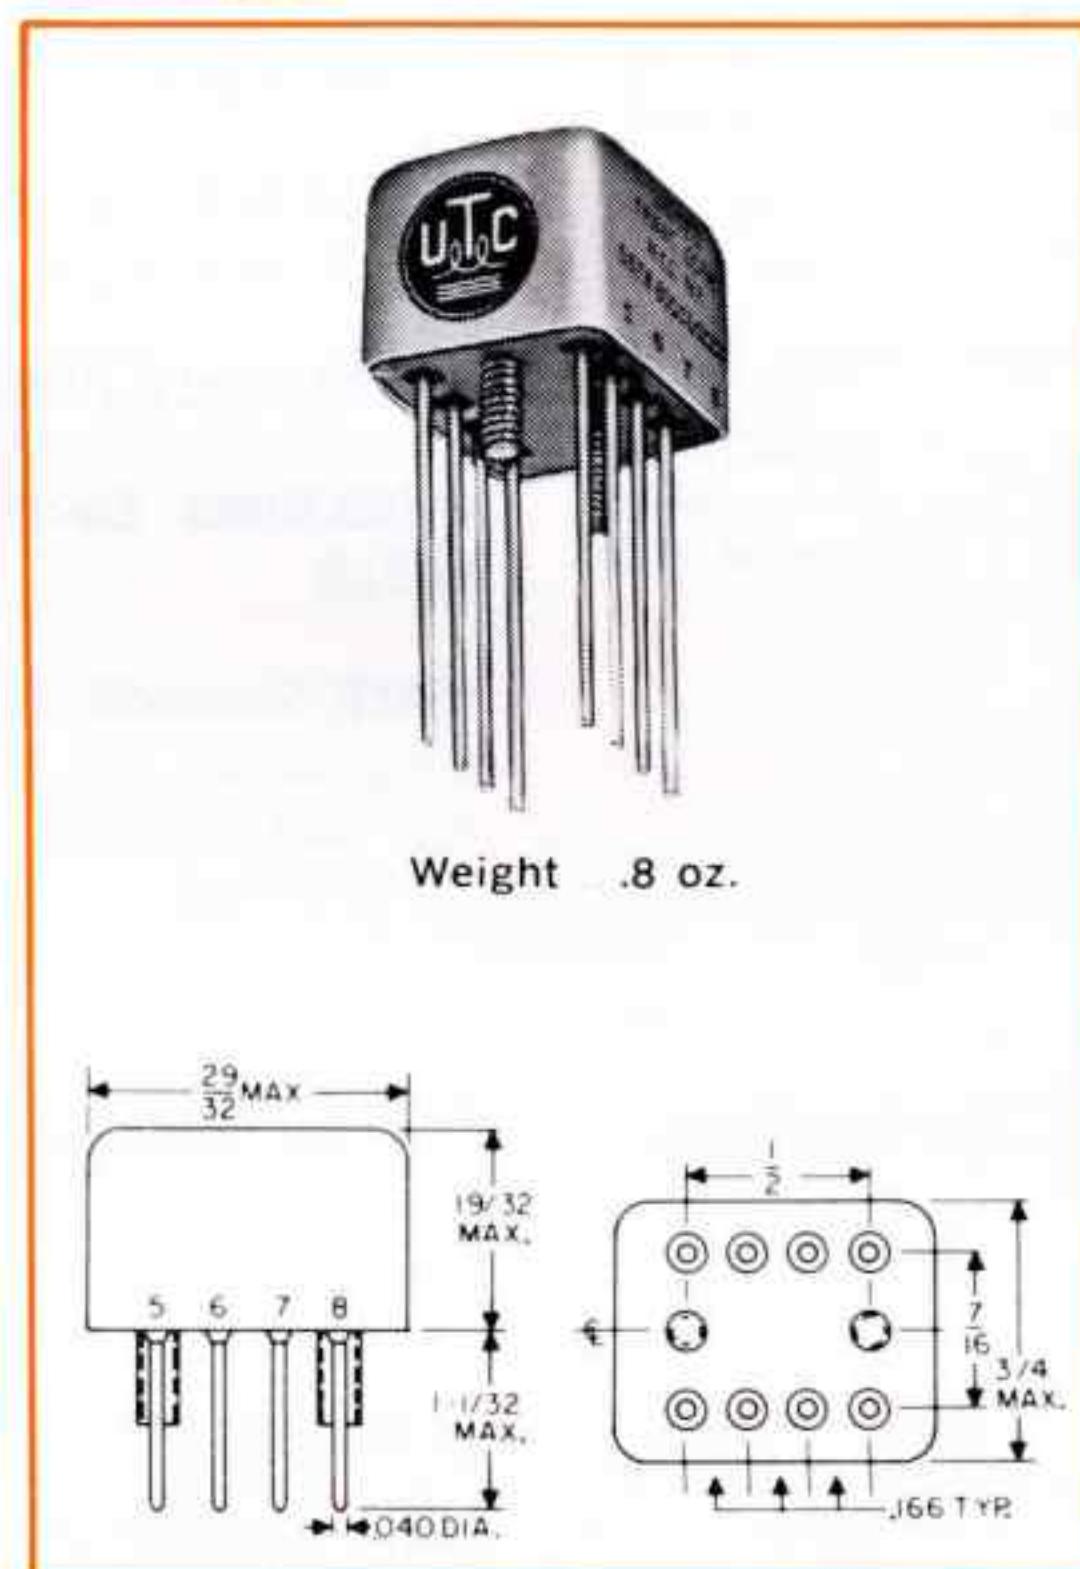

On primaries, CT available on all impedances, split arrangement on most impedances.

SUBMINIATURE INDUCTORS AND AUDIO TRANSFORMERS

SM CASE

FH CASE

PACKAGING Hermetically sealed. Metal encased. Low profile types have straight pin terminals. Vertical, limited board area types have hooked pin headers. All have mounting studs.

WORKING VOLTAGE 175 pk.

MIL SPECS To complete MIL-T-27C Specs. Grade 4, Class R, Life X. See pages 79, 80.

OUNCER, SUBBOUNCER AND SUB-SUBBOUNCER AUDIO TRANSFORMERS

TYPES:

OUNCERS:

- O — Impregnated and sealed in drawn aluminum housing.
- PC-O — Same as O, but with plug-in leads.

SUBBOUNCERS:

- SO — Open frame type with flexible leads.
- PC-SO — Same as SO, but with plug-in leads.
- SO #P — Hermetically sealed to complete MIL-T-27T Specs, Grade 5, Class R, Life X with plug-in leads.

SUB-SUBBOUNCERS:

- SSO — Open frame type with flexible leads.
- PC-SSO — Same as SSO, but with plug-in leads.
- SSO #P — Hermetically sealed to complete MIL-T-27C Specs, Grade 5, Class R, Life X with plug-in leads.

APPLICATIONS These miniature transformers are used in modems, data sets, communications equipment, instrumentation, multi-channel audio consoles, for isolation, balanced to unbalanced lines,

UTC Ouncers, Subouncers and Sub-subouncers have been the industry quality standard in audio transformers for years. Now available in PC board units, with plug-in leads compatible with wave soldering, they are the industry's labor and cost saving standards as well.

signal splitting, phase reversal and impedance matching.

FREQUENCY RESPONSE Ouncers: 100 Hz to 40 kHz. Subouncers: 200 Hz to 20 kHz. Sub-subouncers: 300 Hz to 20 kHz.

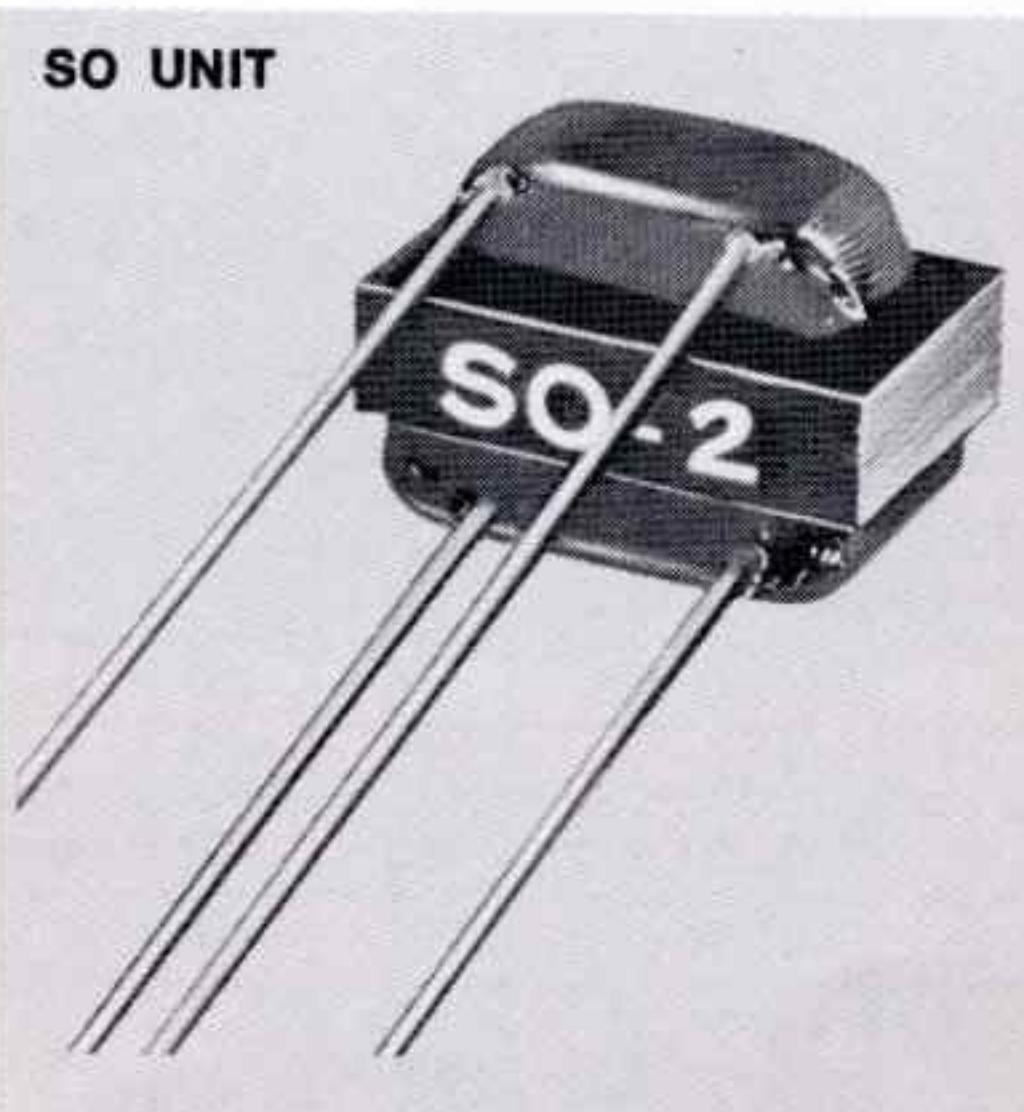

SHIELDING Ouncer: Hipermalloy shield, 1" O.D., is designed to slip fit over cased oencer units, provides 25 db of shielding.

SPECIALS Any open frame type is available molded. Metal encased types to MIL Grade 4 are available from stock or can be made to your specifications.

SUBOUNCER™ UNITS

TYPES

SO — Open frame type with flexible leads.

PC-SO—Printed circuit board mounting open frame (new item).

SO-P — Hermetically sealed type to complete MIL-T-27C Specs, Grade 5, Class R, Life X. See pages 79, 80.

NOTES

ON PERFORMANCE CHARACTERISTICS

- To present the widest range of application, matching impedance values are listed in order of increasing impedance value without regard to the traditional designation of primary or secondary winding.

- The primary and secondary winding can be used arbitrarily as the input or output.

- Impedance values written one above the other indicate a range of matching impedances over which the parts will give satisfactory performance as long as the impedance ratio is maintained.

- Impedance values separated by a slash indicate the series and parallel connected impedance value of the windings.

- PC-SO Types have terminal arrangements that permit the connection of series or parallel windings by bridging adjacent terminals (see Fig. 14). Eliminating unwanted cross overs on the PC board when split is available.

(E.T.) is the maximum voltage, time product for a single pulse applied to the winding.

PIN ARRANGEMENT (Pins Not Used Are Removed "X")

NEW FCT FERRITE CORE AUDIO TRANSFORMERS

UTC Ferrite Core Audio Transformers are the only readily available transformers of their kind — with a ferrite core for superior high-frequency characteristics.

These transformers are ideally suited for high speed digital transmission and similar applications. Plug-in PC board

leads compatible with wave soldering make this line a real cost and labor saver.

FCT transformers have metal cases, split windings on primary and secondary, and frequency response of 200 Hz to 100 kHz min. Hipermalloy magnetic shield cases, electrostatic shields, or special impedances are available.

DIMENSIONS

SCHEMATIC

ULTRA-COMPACT™ AUDIO UNITS

TYPE A CASE

Length 1½"
Width 1½"
Height 2"
Mounting 1½" sq.
Screws 4-40
Cutout 1¾" dia.
Unit Weight ½ lb.

PACKAGING High quality rugged die cast zinc alloy case with both top and bottom mounting facilities. Asterisked items (see Type No.) have multiple alloy shield.

APPLICATIONS Compact commercial amplifiers and equipments.

APPLICATION NOTE Included in line are filament/transistor supply units.

FOR HERMETIC METAL CASED MIL TYPES See page 14.

NOTE All units except those carrying DC in primary employ a true humbucking coil structure, which provides electrical balance and effects good inductive shielding.

LINEAR STANDARD™ AUDIO TRANSFORMERS

PACKAGING High quality rugged die cast zinc alloy case with both top and bottom mounting facilities (except LS-6).

APPLICATIONS High fidelity, broadcast applications. Closest approach to the ideal from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding and dependability.

LOW IMPEDANCE TO GRID AND MIXING AND MATCHING TRANSFORMERS

HIPERMALLOY™ TRANSFORMERS**TYPE H-1 CASE**

Length 2 $\frac{3}{8}$ "
 Width 1 $\frac{15}{16}$ "
 Height 3 $\frac{1}{8}$ "
 Mounting 1 $\frac{3}{8}$ " x 1 $\frac{13}{16}$ "
 Screws 6-32
 Cutout 1 $\frac{13}{16}$ " dia.
 Unit Weight 2 lbs.

PACKAGING High quality zinc alloy rugged die cast case. Both top and bottom mounting facilities.

FREQUENCY RESPONSE ± 1 db from 30 Hz to 20 kHz except where otherwise noted.

APPLICATIONS Compact commercial amplifiers and equipments.

APPLICATION NOTE Included in line are power transformers.

NOTE Units employ a hipermalloy nickel iron core with a hum bucking coil structure which provides electrical balance and effects good inductive shielding.

LOW IMPEDANCE TO GRID AND MIXING TRANSFORMERS

Type No.	Application	Primary Imp. (ohms)	Secondary Impedance	± 1 db from	Max. Level dbm	mw	Unbal. DC in Primary	Case No.
HA-100	Low impedance mike, pickup, or multiple line to grid	50, 125/150, 200/250, 333, 500/600	60,000 ohms overall, split	30-20,000	+18	63	.5 ma	H-1
HA-100X	Same as above but with multiple alloy shields to effect very low hum pickup				+16	40		H-1
HA-101	Low impedance mike, pickup, or multiple line to P.P. grids	50, 125/150, 200/250, 333, 500/600	120,000 ohms overall, split	30-20,000	+18	63	.5 ma	H-1
HA-101X	As above but with multiple alloy shield to effect very low hum pickup		80,000 ohms overall, split	30-20,000	+16	40	.5 ma	H-1
HA-103A	Low impedance mike, pickup or parallel mixer to grid	2.5, 5.5, 10, 15, 22, 30, 38, 60	60,000 ohms overall, split	30-20,000	+18	63	.5 ma	H-1
HA-108*	Mixing, low impedance mike, pickup, or multiple line	50, 125/150, 200/250, 333, 500/600	50, 125/150, 200/250, 333, 500/600	20-50,000	+20	100	.5 ma	H-1
HA-108X*	Same as above but with multiple alloy shields to effect very low hum pickup				+18	63		H-1
HA-130X	Three isolated lines or pads to one or two grids with trialloy internal shields	30, 50, 200/250 each primary	60,000 ohms overall, split	30-20,000	+18	63	.5 ma	H-1

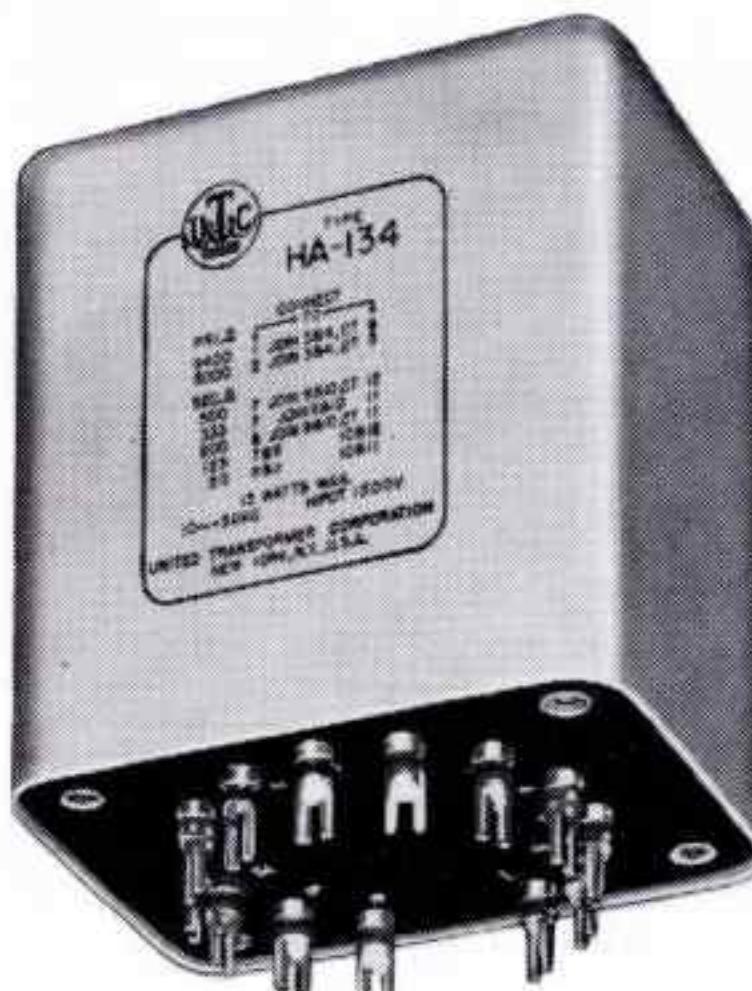

* High electrostatic shielding.

PACKAGING Drawn steel case. High quality phenolic terminal board. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures.

APPLICATIONS Continuous commercial equipment service. The low level interstage units should be used with parallel feed of 50K ohms and .25 mfo. The input transformers' 200 ohm windings are balanced; they may be used for 150 to 250 ohm circuits.

FREQUENCY RESPONSE ±1 1/2 db from 40 Hz to 10 kHz (no unbalanced DC); CVL and CVM units 40 Hz to 6 kHz, or unless otherwise specified.

NOTE CG-134, 135 and 136 are of the humbucking type to assure low hum pick-up.

CG VARIMATCH™ MODULATION UNITS

APPLICATIONS Will match any modulator tubes to any RF load. Eliminates the power loss and high distortion caused by imprecise matching of RF load to class B modulation through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

IMPEDANCES Primary from 500 to 20,000 ohms. Secondary from 300 to 30,000 ohms.

NOTE CVM-5 is in end-casting package. See page 46.

Type No.	Max. Audio Watts	Max. Class C Input	Typical Modulator Tubes	Case No.

PACKAGING Drawn steel case. High quality phenolic recessed terminal strip. Permits above chassis or breadboard wiring in addition to chassis type wiring. Large units are housed in formed cases with top and bottom mounting. All units are vacuum impregnated — compound filled.

APPLICATION Amateur and popular-priced PA service.

NOTE The universal windings provided on driver, matching and output transformers assure a maximum of flexibility.

CLASS A INPUT TRANSFORMERS

Type No.	Application	Ratio	Case
S-2	1 plate* to 2 grids	1:4	G-2
S-3	1 plate* to 1 or 2 grids compact type	1:4	G-1
S-5	Single or double button mike or line to 1 grid humbucking type	1:16	G-2
S-6	Single or double button mike or line to 1 grid, compact type	1:16	G-1

* Will match tubes like 6J5, 6C4, 12AU7, etc. Can be used with high mu triodes with loss in low frequencies. Pri. DC to 8 ma.

UNIVERSAL MODULATION TRANSFORMERS

(Secondary carries Class C current)
Any modulator tubes to any RF load.
(see chart supplied with units)

Maximum efficiency and lowest distortion in a modulator stage are made possible by proper matching of impedances. These units cover every modulator combination. Full Class C current can be carried. Primary impedances from 500 to 20,000 ohms ... secondary from 200 to 22,000 ohms.

Type No.	Audio Power	Case
S-18	12 watts	G-3
S-19	30 watts	G-4
S-20	55 watts	G-5
S-21	110 watts	G-7
S-22	250 watts	G-9

TYPICAL MODULATOR COMBINATIONS

S-18 — 12 WATTS MAX.

STANDARD POWER TRANSFORMER AND INDUCTOR SELECTION GUIDE

Product Series	Description	Size	Weight	Frequency	Power Range	Page
MILITARY TYPES						
DO-T400	Flexible lead ultraminiature power transformer. Hermetically sealed to MIL-T-27C Grade 5, Metal Clad.	5/16 dia x 1 1/2" long	1/10 oz	380 Hz to 2400 Hz	400 mW	41
H	Inductors. Hermetically sealed inductor to MIL-T-27C Grades 4 & 5.	3/4 x 1 x 2 3/32" h to 7 x 7 x 8" h	.05 lb to 60 lbs	.017 A to 30 A*	0.4 mH to 450 Hys†	13, 14
H	Hermetically sealed to MIL-T-27C. Grades 4 & 5. Transistor, filament, inverter and plate type. Metal clad & molded.	3/4 x 7/8 x 5/16" h to 11 x 11 x 14 3/4" h	.04 lb to 160 lbs	50 Hz to 2500 Hz	1.2 VA to 5.0 KVA	36-44
HIT	Ultra-shielded power line isolation transformers. Hermetically sealed to MIL-T-27C. Grade 4. 0.1 mfd or less, effective coupling.	4 1/32 x 4 1/32 x 3 1/32" h to 8 x 6 1/32 x 5 17/32" h	5 lbs to 60 lbs	50 Hz to 400 Hz	50 W to 1200 W	44
MET	Hermetically sealed metal clad to MIL-T-27C. Grade 4. For 400 Hz application to give min size. Transistor, filament, universal types.	6 1/4 x 1 13/32 x 1 7/16" h to 3 1/16 x 2 5/8 x 4 1/4" h	1 1/2 oz to 4 1/2 lbs	380 Hz to 2400 Hz	1.4 W to 240 W	36, 37, 41
N	Mil. St'd. filament & plate transformers per MIL-T-27C. Grade 4 (ruggedized) construction.	1 15/16 x 1 13/16 x 2 7/16" h to 5 1/16 x 4 5/16 x 5 1/2" h	1 5/16 lbs to 16 1/2 lbs	50 Hz to 400 Hz	7.5 W to 400 W	45
NV	Inverter transformer, miniature. Hermetically sealed to MIL-T-27C, Grade 4, Class V. Multiple outputs.	1 1/16 x 1 1/16 x 1 13/16" h to 1 1/4 x 1 1/4 x 1 13/16" h	1.2 to 2.5 oz	10 kHz, 20 kHz, 50 kHz	32.5 VA to 89 VA	38
SRC	Transformer, hermetically sealed to MIL-T-27C, Grade 4. Precision Scott-T reference.	1 5/8 x 1 5/8 x 2 3/8" h	2/3 lb	60 Hz to 400 Hz	6 VA	44
Z	Mil. St'd. Inductors per MIL-T-27C. Hermetically sealed. Series & parallel connections.	2 5/16 x 2 1/16 x 3 1/8" h to 4 13/16 x 5 1/16 x 7 1/2" h	2 lbs to 35 lbs	80 mA to 630 mA*	4 Hys to 40 Hys†	45

INDUSTRIAL AND COMMERCIAL TYPES

TP	60 Hz. Three phase power transformers for power supply applications above 1 K.V.A. from 24 to 55 volts.	8 x 6 1/4 x 5 5/8 to 11 1/8 x 8 3/4 x 8 3/8	35 lbs to 90 lbs	50/60 Hz	1250 VA to 6600 VA	35
A	Ultra compact components, small & light in weight. Ideal for remote amplifier and similar compact equipment.	1 1/2 sq x 2" h	1/2 lb	60 Hz 15 mA to .4 A*	2.5 VA 60 mHys to 60 Hys†	24, 25
CG	High quality. Transistor filament & plate use. Designed to AIEE. Rugged drawn steel cases or end castings. Vacuum impregnated & compound filled.	1 13/16 sq x 2 1/2" h to 21 x 10 x 13 1/4" h	1 lb to 253 lbs	50/60 Hz	7.5 VA to 4950 VA	46
CG	(Inductor) High quality inductors. (As above.)	2 5/16 x 2 3/32 x 3 1/4" h to 11 1/2 x 4 3/4 x 6 7/8" h	2 1/2 lbs to 40 lbs	15 mA to 5 A*	2.5 mHys to 250 Hys†	46
FT	Channel frame, filament/transistor transformers. For 2.5 VCT to 48 VCT. From .04A to 10A.	2 1/8 x 1 3/8 x 1 1/4" h to 4 1/8 x 2 5/8 x 2 5/8" h	1/4 lb to 2 1/2 lbs	50/60 Hz	7.5 VA to 48 VA	48
HP	Pre-amplifier or tuner supply. Rugged die cast case of high conductivity alloy. For portable & compact service.	2 3/8 x 1 15/16 x 3 1/8" h to 3 1/16 x 2 13/16 x 3 1/2" h	2 lbs to 5 lbs	50/60 Hz	18 VA to 35 VA	29
PF	For photoflash and similar applications. Line and transistor inputs. Power, inverter & trigger types.	7/8 d x 1 15/16" h to 2 1/2 x 3 3/4 x 2 5/32" h	1/2 oz to 2 lbs	Trigger DC Inverter 4 1/2 V DC 50/60 Hz	6 KV pulse to 15 KV pulse 40 Watt-Sec	49
R	(Inductors) Replacement types, channel frame construction. Vacuum sealed to prevent corrosion.	2 5/8 x 2 13/16 x 3 1/4" h to 4 1/8 x 2 1/4 x 2 5/8" h	1/2 lb to 2 1/2 lbs	30 mA to 5 A*	2 mHys to 5 Hys†	48, 49
R	Replacement type line adjusting and isolation transformers. High reliability. Vacuum sealed to prevent corrosion. Housed in protective shells.	2 5/8 x 2 13/16 x 3 1/4" h to 12 x 7 x 9" h	2 1/2 lbs to 70 lbs	50/60 Hz	50 VA to 2500 VA	48, 49
S	Popular-priced series for filament transistor & plate use. Ratings are based on ICAS intermittent use. Vacuum impregnated & compound filled.	1 7/8 x 2 13/16 x 1 3/4" h to 10 1/4 x 7 3/8 x 9 1/4" h	1 lb to 52 lbs	50/60 Hz	7.5 VA to 1400 VA	47
S	(Inductors.) (As above.)	7/8 x 2 13/16 x 1 3/4" h to 4 5/8 x 5 3/8 x 5 3/8" h	1 lb to 12 lbs	3 mA to 5 A*	2 mHys to 500 Hys†	47
SC	Signalling & control transformers, for operating relays, sirens, horns, gongs, etc. 4/8/12/16/20/24 volts. Screw type binding posts secondary terminals for easy connections.	3 x 3 1/2 x 9/16" h to 4 x 5 x 4 3/4" h	3 lbs to 10 lbs	50 Hz to 60 Hz	50 W to 250 W	49

* DC Current Rating.

STANDARD MAGNETIC AMPLIFIER SELECTION GUIDE

Product Series	Description	Size	Weight	Frequency	Page
MAS	Solid state push pull magnetic amplifier. High gain, hermetically sealed. Plug-in octal header.	1 1/2 d x 3" h	1/2 lb	400 Hz	39
MAT	Hermetically sealed. MIL-T-27C, Grade 4, for servo motors and other applications. Tube and transistor inputs.	1 1/4 x 1 15/16 x 2 5/16" h to 4 1/16 x 4 x 4 15/16" h	.65 lb to 14 lbs	60 Hz & 400 Hz	39

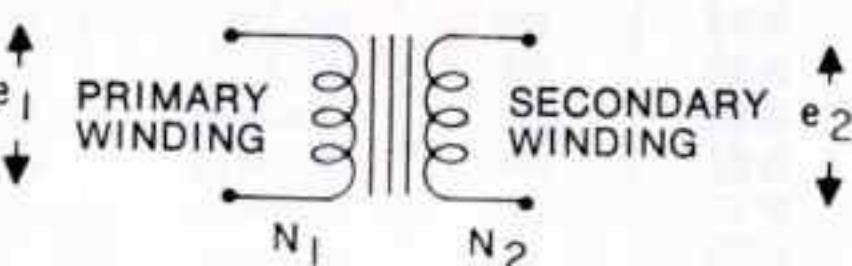

GENERAL INFORMATION ON POWER TRANSFORMERS AND INDUCTORS

POWER TRANSFORMERS A power transformer transforms voltage and currents to higher or lower magnitudes with the purpose of converting prime supply voltages to specific application requirements.

UTC manufactures a wide variety of power transformers for military, space, industrial and commercial application.

THEORY Basically, a transformer consists of two or more coils of wire inductively coupled to each other. When alternating current flows in one coil an alternating current of the same frequency is induced in the other coils. The magnitude of this voltage is a function of the relative number of turns on the coils and the degree of coupling. In a power transformer the coils are wound on a high permeability core, hence most of the flux is confined to the core and a high degree of coupling between coils is realized. This makes the voltage almost wholly dependent on the relative turns or the turns ratio.

FUNDAMENTALS The simplest transformer consists of two windings.

The primary winding is connected to the alternating current voltage source and the secondary winding is connected to the load.

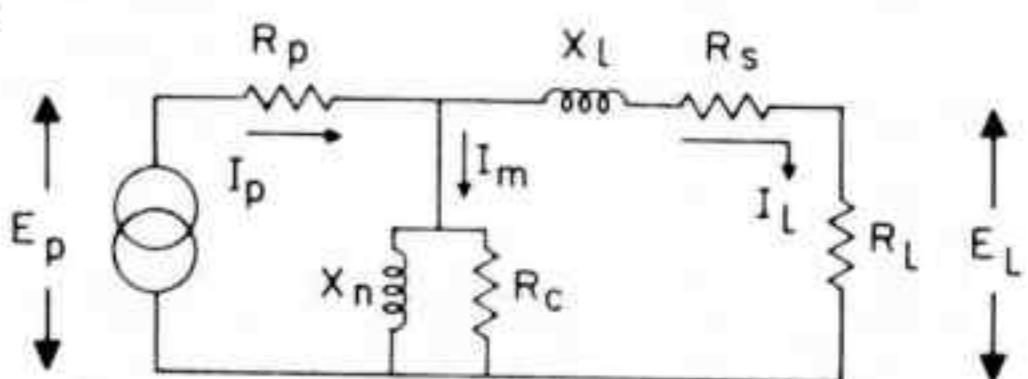

The physical law governing induction in the windings is: $e = N \frac{d\phi}{dt} \times 10^{-8}$

This law can be stated: The voltage induced in a coil is proportional to the number of turns and to the time rate of change of magnetic flux in the coil.

In a power transformer the flux links between coil windings is almost perfect, consequently, $\frac{e_1}{e_2} = \frac{N_1}{N_2}$

where e_1 is the source of voltage and e_2 is the output voltage. $\frac{N_1}{N_2}$ is the turns ratio.

EQUIVALENT CIRCUIT For simplicity of analysis a transformer with a $\frac{N_1}{N_2} = 1$ is shown. This model can be extended to other turns ratios by the use of scaling factor $\frac{N_1}{N_2}$.

R_p = Primary winding DC resistance.

R_s = Secondary winding DC resistance.

X_m = Represents an inductive reactance that causes a current to flow which produces the flux in the transformer magnetic core.

R_c = Is a resistance that represents the losses in the magnetic core of the transformer. These losses are of two types: hysteresis and eddy currents. Hysteresis refers to losses due to movement of the core molecules. Eddy currents are the currents induced in the core due to core material conductivity.

X_L = Represents an inductive reactance caused by the magnetic flux that does not couple both coils. It is shown as an inductance and is the result of imperfect coupling. This parameter is called leakage inductance.

R_L = Load resistance represents the device that is being powered by the transformer and constitutes useful power.

E_p = Input Voltage.

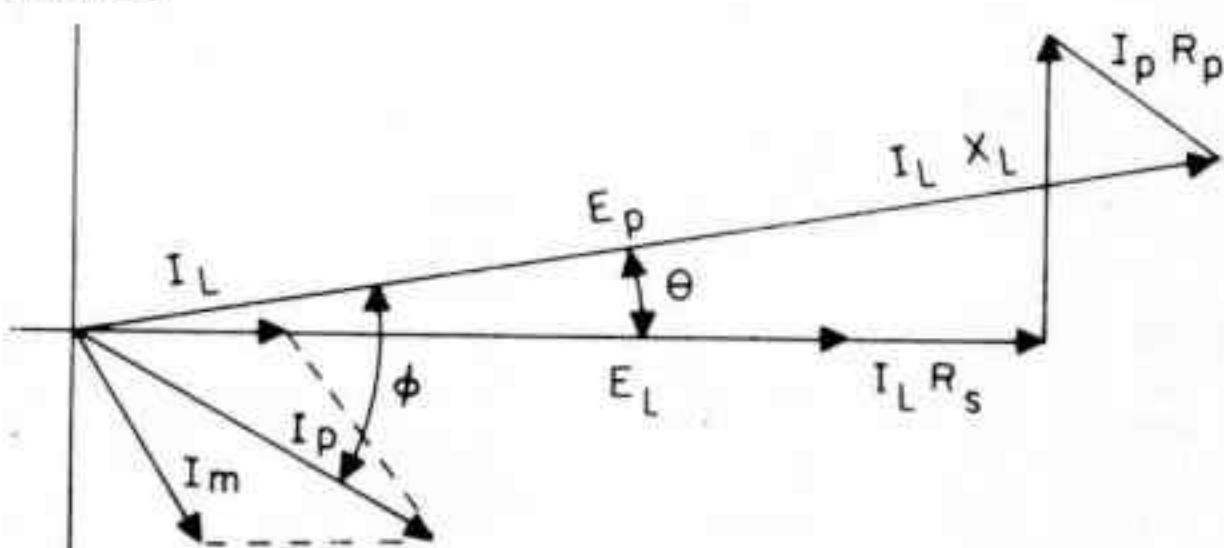

I_p = Input Current.

I_m = Current due to X_m and R_c called magnetization of exciting current.

E_L = Load Voltage.

I_L = Load Current.

VECTOR DIAGRAM

The diagram shows the result of the transformer parameters considered in the equivalent circuit and their terminology.

Although we assumed a $\frac{N_1}{N_2} = 1$ transformer E_L is smaller than E_p due to voltage drops $I_L R_s$, $I_p R_p$ and $I_L X_L$. In the unloaded transformer I_L would not exist and I_p would equal I_m , which normally is small compared to I_L . Consequently,

$$\frac{E_p}{E_L} = \frac{N_1}{N_2} \text{ very closely.}$$

- | | |
|--|---|
| 1. Percent regulation = $100 \frac{(E_{L0} - E_L)}{E_{L0}}$ | Unloaded Loaded
(E _{L0} - E _L)
E _{L0} Loaded |
| 2. Power Factor = $\frac{\text{Output power plus losses}}{\text{Input volt-amps}}$ | and is numerically equal to cosine ϕ . |
| 3. Efficiency = $\frac{\text{Output power}}{\text{Output power plus losses}}$ | |

4. Phase Shift between E_L and E_p sine wave shown as angle θ . Actual losses which show up as heat in the transformer and cause a temperature rise shown up in the diagram at the following points:

1. Core loss = $I_m^2 R_c$
 2. Primary winding losses = $I_p^2 R_p$
 3. Secondary winding losses = $I_L^2 R_s$
- Total losses is the sum of these losses.

POWER INDUCTORS An inductor is used to impede the flow of AC current. They offer a high impedance to alternating currents but allow DC current to flow.

The principal purpose of these inductors is to reduce the AC ripple in rectifier power supplies in conjunction with capacitors. They are specified by inductance and DC current capability.

HERMETIC POWER COMPONENTS

HIGHEST INDUSTRIAL AND MILITARY RELIABILITY UTC hermetic power components have found wide acceptance for industrial electronics equipment where the highest reliability is important. The insulation operating temperature (ambient temperature plus transformer's temperature rise) in a transformer considerably controls its life and reliability.

For military application ambient is based on 65°C, for Class R units. This allows a 40°C rise for the maximum final temperature of 105°C prescribed for Class R units in MIL-T-27C.

The power transformers and inductors listed on pages ?? through ?? are available, on request, built to Class S specifications. These units are allowed a maximum final temperature of 130°C. MIL-T-27C allows the use of a higher temperature class unit for a lower temperature application. Therefore, a Class S unit may be used in a Class R application. Class S units are equally as reliable as Class R temperatures.

Industrial applications ambients are appreciably lower. As a result, the temperature rise can be approximately 15°C higher (40°C to 55°C rise), still providing the same overall life and reliability. This results in the ability to operate the same components at somewhat greater ratings.

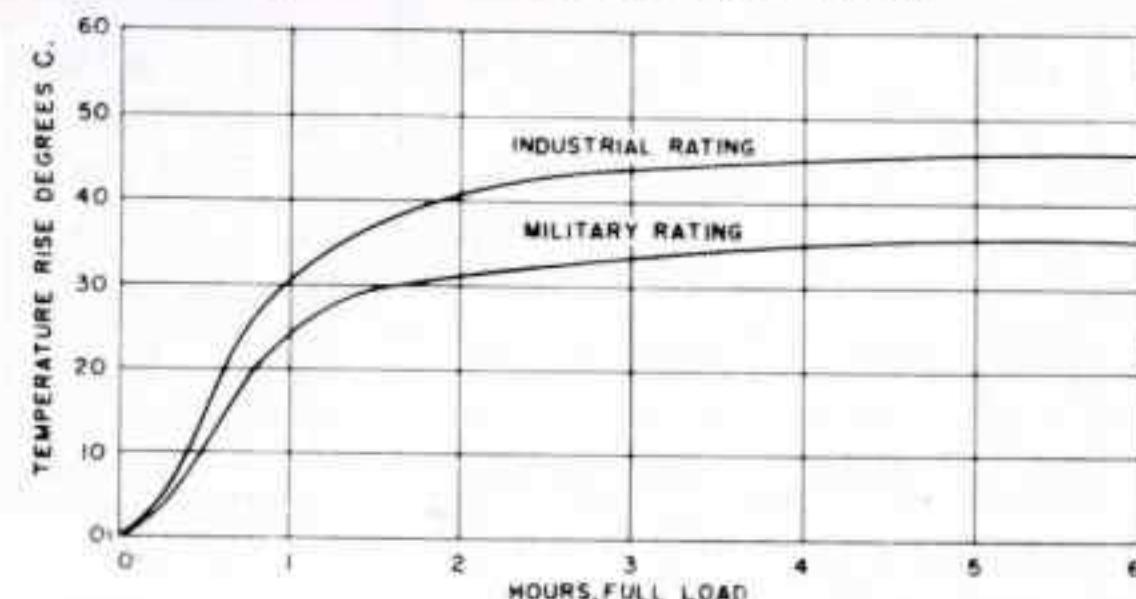

The listings of our power transformers, filament transformers, plate transformers, and filter inductors are given for both MIL-T-27C and industrial service, the latter in bold type.

These units exceed MIL-T-27C requirements in many respects. The insulations employed have exceptional safety factors. The use of special core materials provides high efficiency and small size. The transformer regulation has been a fundamental design consideration in all units to provide for diverse applications in which they may be employed.

DUAL VOLTAGE RATINGS UTC hermetic plate and power transformers incorporate a tapped high voltage winding to provide either of two secondary voltages for greatest versatility. For full understanding of the capabilities of these components, the DC voltage and permissible currents have been listed for both inductor and condenser input at both output voltages as well as for military and industrial service.

MULTIPLE RATING FILTER INDUCTORS The "H" series of filter inductors are designed and rated with inductance shown for four different current values. The industrial ratings are shown in bold type.

These units are 100% tested to exceed the inductance value specified at the maximum military current rating shown.

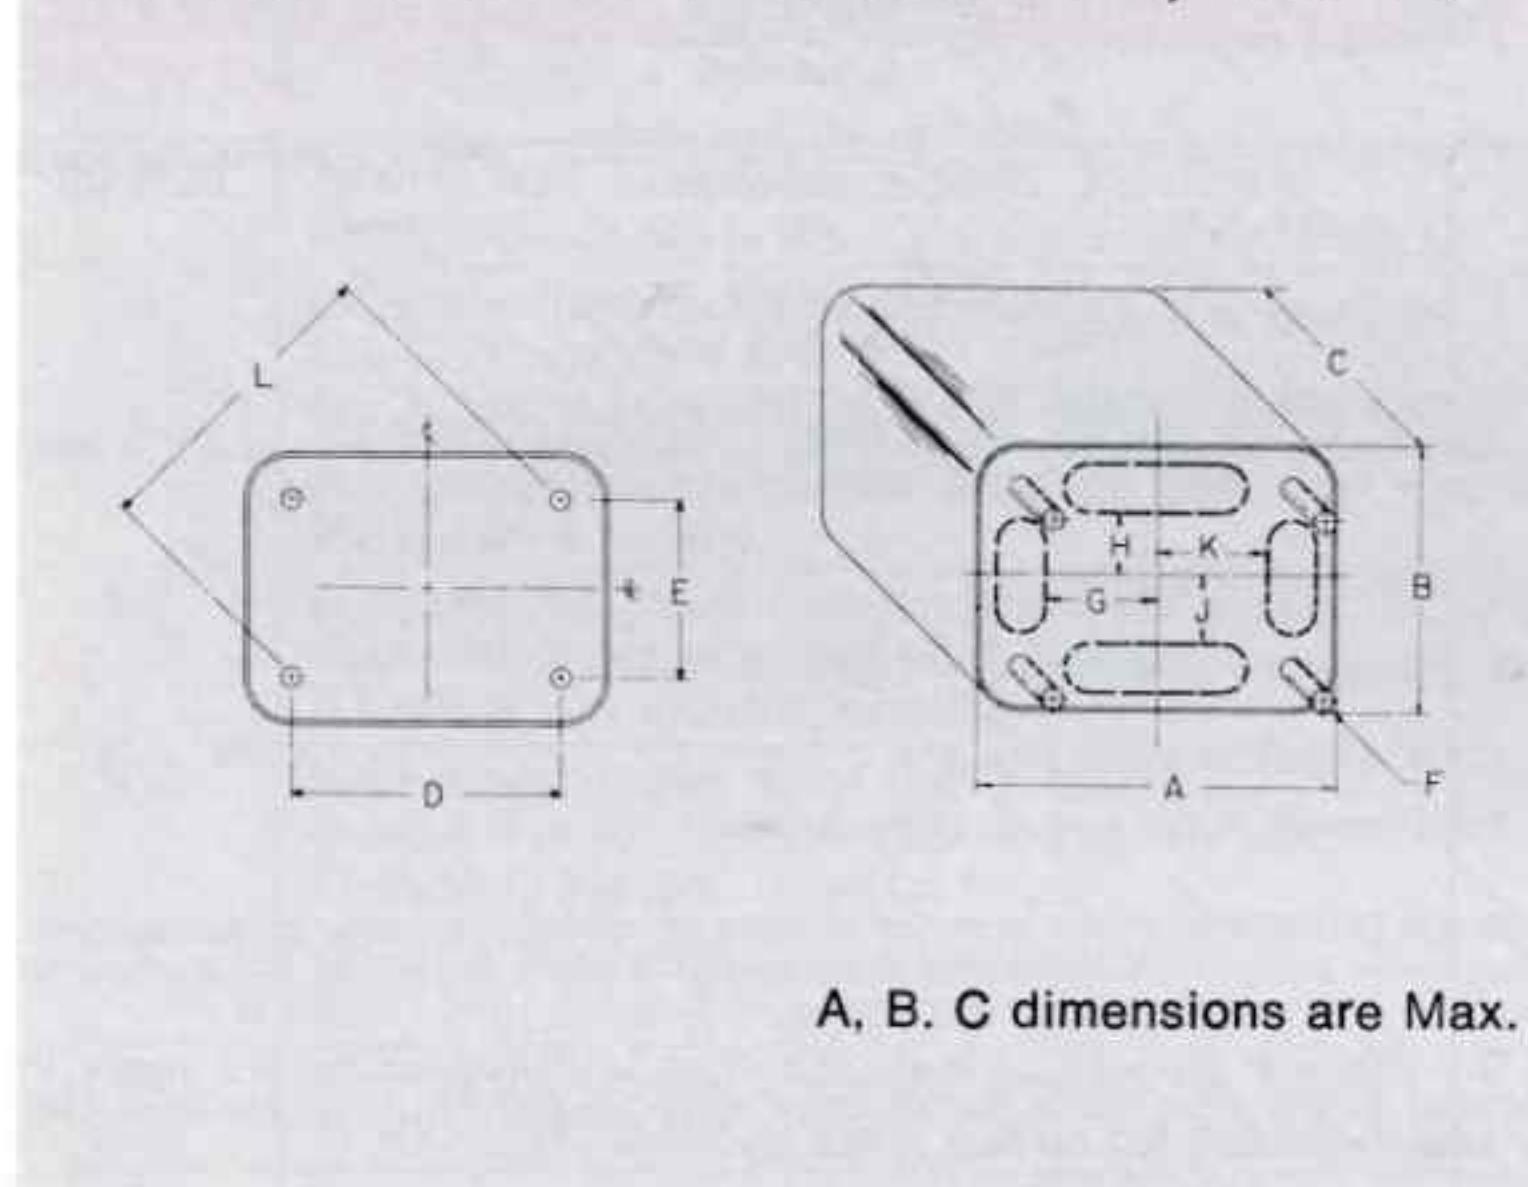

SPECIAL DESIGNS In addition to the needs met by UTC stock power components, there are many unique applications which require special units. These custom designs, produced to customer specifications, range from milliwatts to 100 KVA capacity. They comprise temperature ranges from Class R (105°C) to Class U (higher than 170°C). All types of mechanical and electrical configurations are available. Special engineering emphasis is placed on customer requirement.

Our engineering and laboratory facilities are uniquely equipped to handle customer problems in tough design areas such as shielding, corona, reliability, high voltage, miniaturization, etc.

Facilities are available for production of samples as well as large quantities. The close coordination between our sample shop and production assures production quantity equal to sample quality.

NEW THREE PHASE HIGH CURRENT RECTIFIER TRANSFORMER

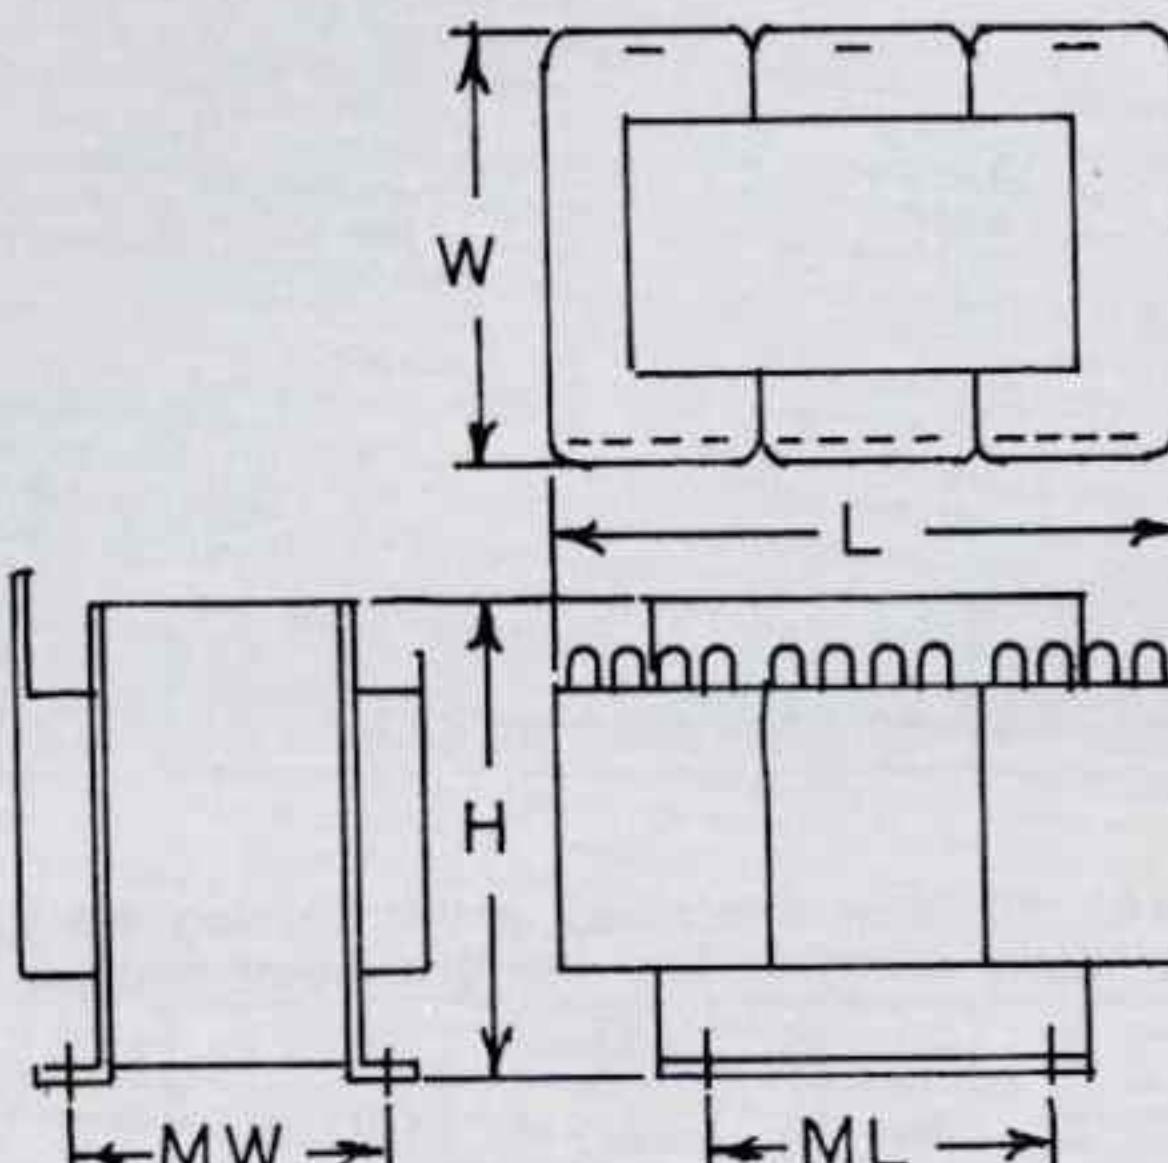

- HIGH CONVERSION EFFICIENCY
- LOW RIPPLE VOLTAGE — HIGH RIPPLE FREQUENCY (MEANS REDUCED FILTER CAPACITOR REQUIREMENTS)
- BALANCED LINES (MEANS MORE EFFICIENT USE OF POWER SOURCES)
- LOW LINE DISTORTION
- AVAILABLE IN MIL GRADE 4 OR 5 ON SPECIAL ORDER

UNIVERSAL TRANSISTOR SUPPLY TRANSFORMERS

PACKAGING Hermetically sealed. Drawn metal case to Mil Grade 4.

MIL SPECS To complete MIL-T-27C Specs. See pages 79, 80. Mil Type TF4SX02 plus two letter case code.

NOTES Chart, on facing page shows the secondary AC voltages available, and the approximate DC voltages resulting, in typical capacitive filter silicon rectifier circuits (at the indicated currents). Since the capacitor following the rectifier affects the DC, voltage values used (in 1000 mfd) are shown in parenthesis () after each current rating. Case dimensions on page 34.

Primary taps can modify nominal AC voltages by -6%, +6%, and +12%.

TRANSISTOR INVERTER AND CONVERTER TRANSFORMERS

PACKAGING Hermetically sealed. Metal cased Mil Grade 4.
CONSTRUCTION Layer construction instead of random wound coil gives highest reliability. Advanced coupling technique, between windings, reduce spikes that often endanger driving transistors.

FREQUENCY Approximately 1000 Hz.

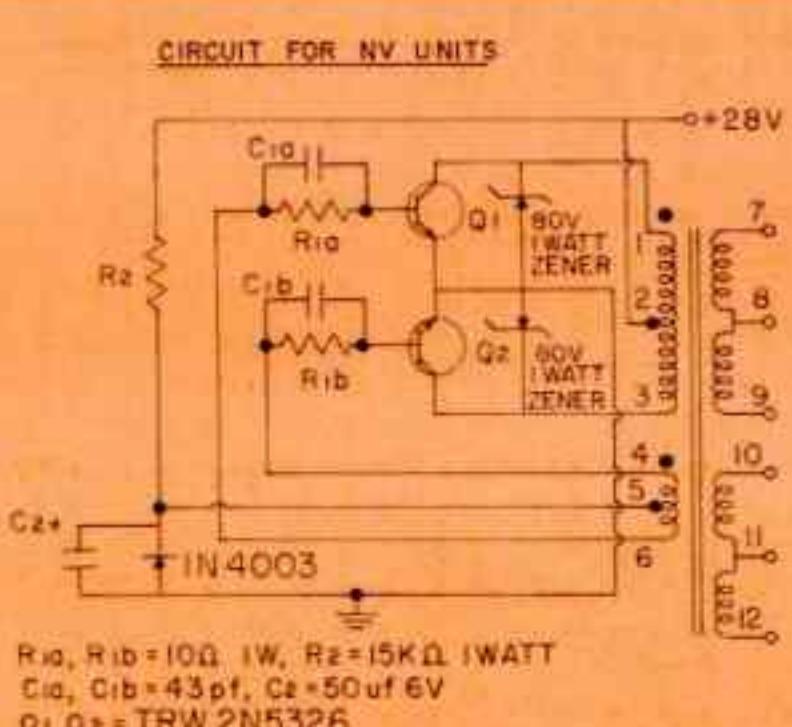

INPUT VOLTAGE 12/14 V or 24/28 V. With 6/7 V instead of 12/14 V output voltage is halved, current rating remains the same.

MIL SPECS To complete MIL-T-27C Specs. Mil type: TF4SX40 plus two letter case code. See pages 79, 80.

H-100	550 V-200 ma	GB

UNIVERSAL HIGH FREQUENCY INVERTER AND CONVERTER TRANSFORMERS

NV™ SERIES

- Hermetically sealed.
- Made to complete MIL-T-27C specs; Grade 4, Class V. See pages 79, 80.
- High efficiency.
- Advanced winding coupling technique.
- Reduced spiking assures transistor reliability.
- Miniaturization due to the use of high efficiency core material.
- Ease of rectifier filtering at high operating frequencies.

DIMENSIONS

NV-520, NV-720: 1 $\frac{3}{16}$ sq v 1 $\frac{3}{16}$ " high max.

NV-530, NV-730: 1 $\frac{1}{16}$ sq x 1 $\frac{3}{16}$ " high max.

Approximate weights: 1.5 oz. and 2.5 oz.

MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

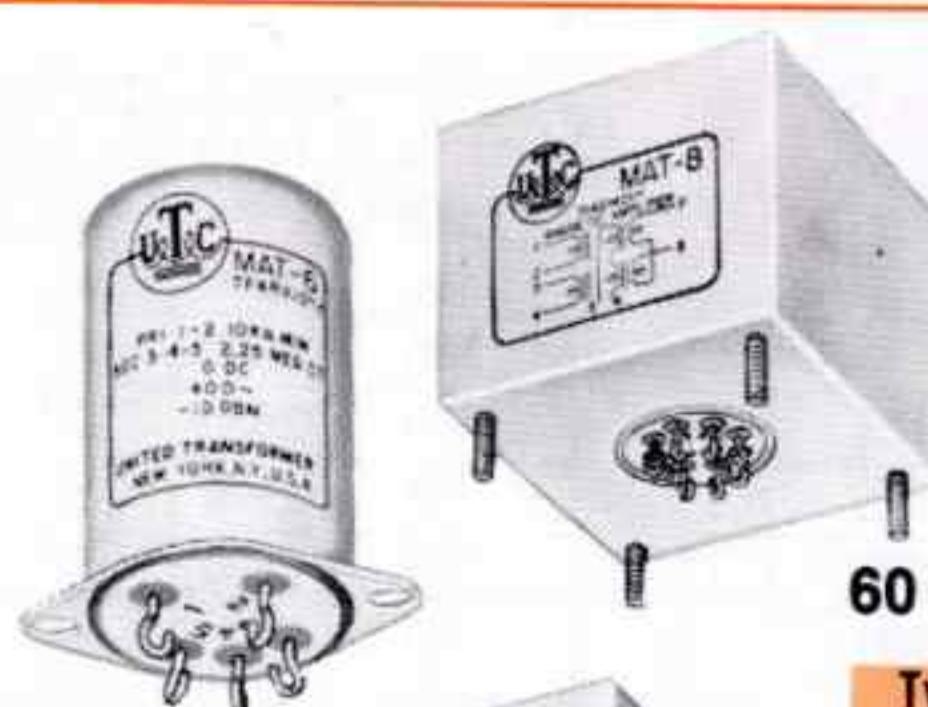

MAT™ SERIES

The MAT 1 through 4 and 7 through 10 magnetic amplifiers are exceptionally stable units designed for the control of 2 phase, 115V, 400 Hz servo motors.

They are compact, hermetically sealed, magnetically shielded, and meet MIL-T-27C and MIL-E-5400 specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by triode or transistor discriminator. The input signal can be polarity reversible DC or phase reversible 400 Hz with or without suppressed carrier modulation.

The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative. Power gain of the magnetic structure is approximately 40. Response time approximately 7.5 milliseconds.

The maximum null voltage is 3 Volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift for motor load, for 3 phase 30° phase shift.

60 Hz TYPES

Type No.	Mat-60

FILTER INDUCTORS

METAL CASED

MOLDED

PACKAGING Hermetically sealed. H-70 group—Metal encased. H-105 group—molded.

APPLICATIONS Transistor supply units have two windings for wide flexibility. All are swinging types to enhance power supply regulation.

CONSTRUCTION Grain-oriented core materials impart highest permeabilities, producing exceptionally high inductance for size.

MIL SPECS To complete MIL-T-27C Specs. H-70 group (metal cased) Grade 4, Class S, Life X. H-105 group (molded) Grade 5, Class S, Life X. See pages 79, 80.

POWER AND PLATE TRANSFORMERS

PACKAGING Hermetically sealed. Metal cased.

MIL SPECS To complete MIL-T-27C Specs. Grade 4, Class S, Life X. See pages 79, 80.

APPLICATIONS Plate-filament transformers: primary 115 V, 60 Hz suited to 50*-1000 Hz service. Plate transformers (only): Primary 105/115/210/220 volts, 50/60 Hz.

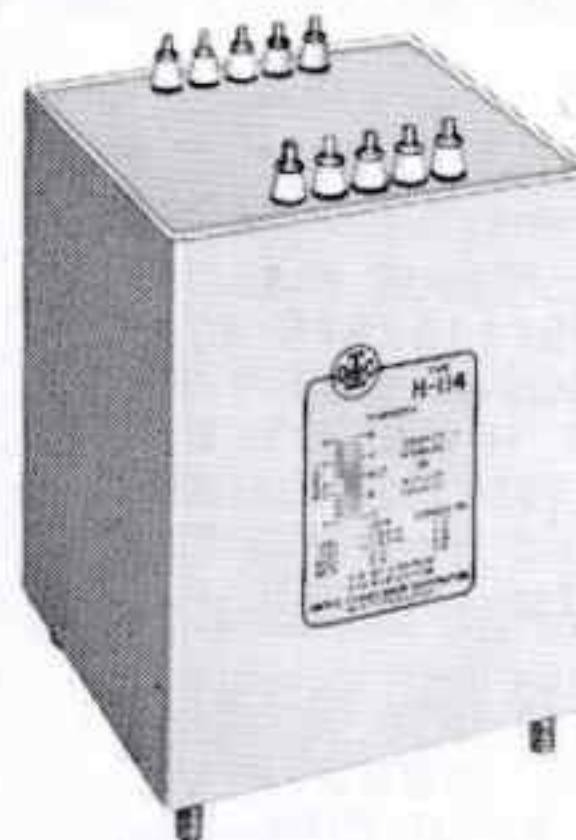

NOTES:

- "L" ratings are choke input.
- "C" ratings are condenser input.
- Tapped high voltage winding provides either of two secondary voltages for greatest versatility. Power transformer listings indicate DC voltages and permissible currents for both inductor and condenser input filters, as well as for military and industrial applications.
- Units with a W suffix have been designed to be used both in full wave center-tap and full wave bridge application. In these units, center-tap of secondary winding may be disconnected from ground. All ratings are for inductor input filtering.

HIT™ SERIES ULTRASHIELDED POWER-LINE ISOLATION TRANSFORMERS

SIMULATES BATTERY OPERATION FOR CRITICAL CIRCUITS REQUIRING EXTREME ISOLATION FOR POWER LINE.

The effective capacity coupling between primary and secondary windings is less than 0.1 pf. Individually terminated shields allow maximum circuit design flexibility to further reduce this minute capacitance. Input and output terminals are on opposite sides of housing for excellent line/ load isolation.

SRC-10™ PRECISION SCOTT-T REFERENCE TRANSFORMER

For precise conversion of three wire synchro information to equivalent resolver information. Two outputs 90° apart can be utilized in analog and digital computer or coordinate transformation applications. Mil type TF4SX09AJ.

Input 90 V 60/400 Hz 3 Phase high impedance for synchro output.

Output 1) 3 V @ .25 ma } 2 Phase Output.

2) 3 V @ .25 ma }

a) Magnitudes of output voltage matched within 0.25%.

b) Phase angle of output voltages is 90° ±.225°.

Other electrical values to your requirements.

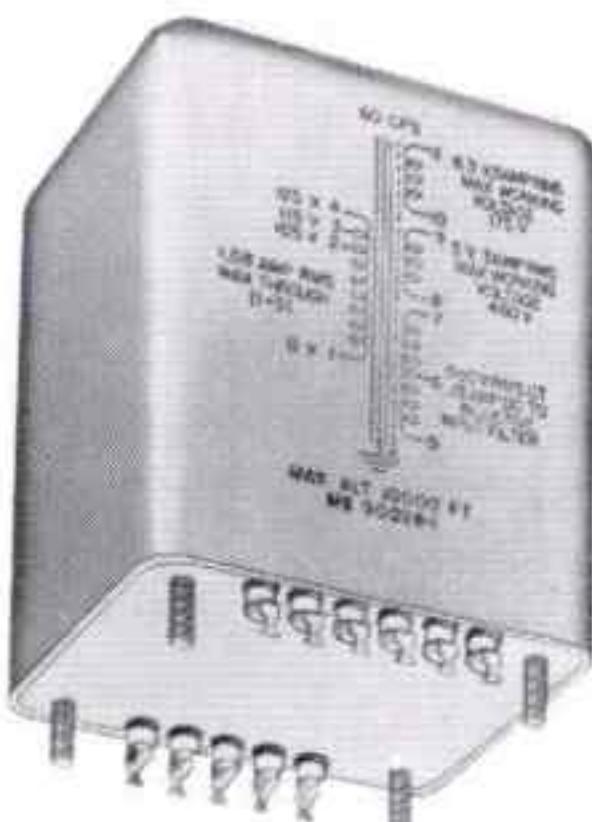

AJ Case - Pg. 34

TRANSISTOR SUPPLY TRANSFORMERS

Primary 115 V. 50/60 Hz (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.C.T.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding.

MILITARY STANDARD TRANSFORMERS AND INDUCTORS

PACKAGING Hermetically sealed. Metal cased to Military Standard Specifications.

MIL SPECS To complete MIL-T-27C Specs. See pages 79, 80

FILAMENT, POWER AND PLATE Transformer primaries are 105/115/125 V. 54/66 Hz. Current ratings for high voltage secondaries are DC, choke input filter. For condenser input, reduce current to 70% of rated values. The -2 after MS No. indicates Grade 4 (ruggedized). All units are electrostatically shielded.

INDUCTORS Consist of 2 windings that can be connected either in series or parallel for maximum flexibility. Higher inductance figure is for series connection, lower inductance figure is for parallel connection.

COMMERCIAL GRADE COMPONENTS

PACKAGING Vacuum impregnated and sealed with special insulating compounds.

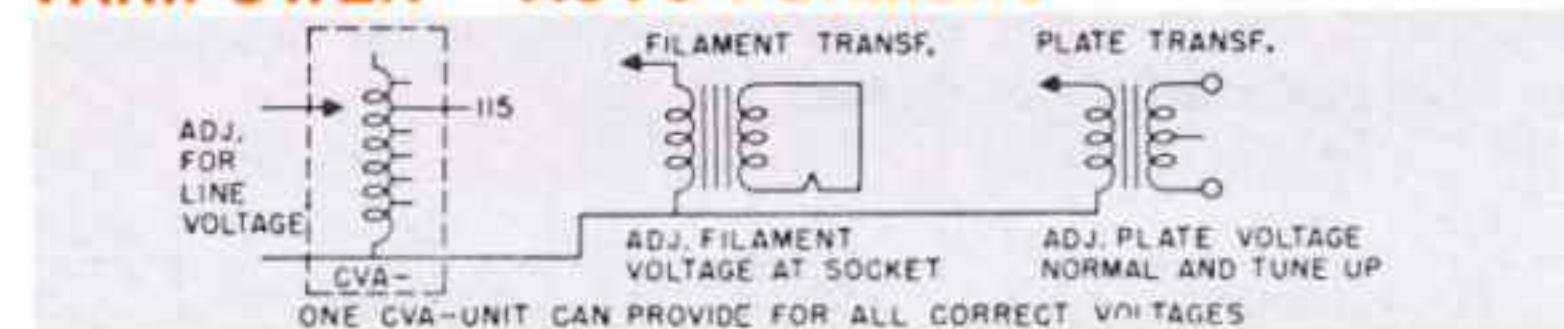

SPECIFICATIONS To IEEE commercial standards. Ratings conservative for continuous duty.

APPLICATIONS Commercial equipment, amateur and public address systems.

NOTE Tested at twice maximum working voltage plus 1000 V for breakdown. Surge tested at 250% normal voltage.

VARIPOWER™ AUTO-FORMERS

CVA-5	2000	RC-175

Designed for line voltage control filament control and reduced power operation. Output voltage from 0 to 130 volts, 50/60 Hz. Varipower units permit control of filament voltage at the tube socket to within 2½% of desired value simultaneously with line voltage control and plate voltage control. Can be used to reduce or increase voltages on filament transformers. Taps at 25, 55, 75, 95, 100, 105, 110, 115, 120, 125 and 130 volts permit output voltages from 0 to 130 volts in 5 volt steps...from 115 V. 50/60 Hz.

CG PLATE TRANSFORMERS

Primaries for 105, 115, 210, 220, 230 volts, 50/60 Hz. For reduced power, secondary voltages can be reduced to half by using 220 V. Pri. on 110 volts. These transformers may be used on 25 to 43 Hz if 220 V. Pri. is used on 110 volts; secondary voltage is simultaneously halved.

Units with a W suffix have been designed to be used both in full wave center tap and full wave bridge application. In these units, center-tap of secondary winding may be disconnected from ground. All ratings are for choke input filtering. Other electrical and mechanical parameters on "W" units are the same as the nonsuffixed units.

SPECIAL SERIES POWER AND FILAMENT TRANSFORMERS AND INDUCTORS

G-1 — G-4 CASES

(WILL TAKE 8-32 MTG. SCREWS)

G-5 — G-12 CASES

(WILL TAKE 12-28 MTG. SCREWS)

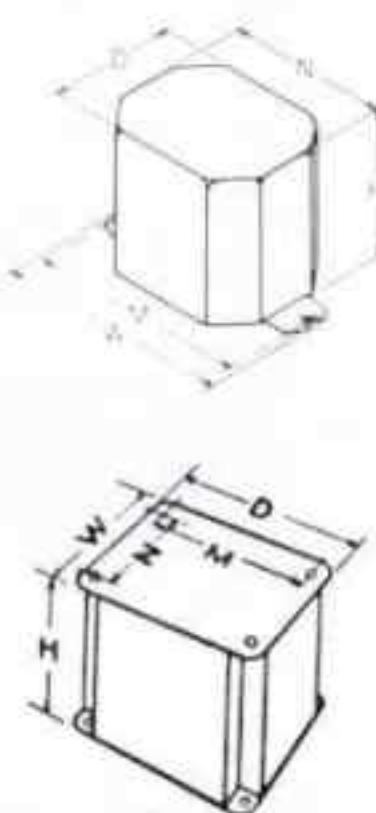

PACKAGING G-1 thru G-4 drawn cases with recessed terminal strip. G-5 thru G-12 formed cases with top and bottom mountings.

APPLICATIONS Designed for amateur and PA service, rating based on ICAS intermittent use. Tapped coils on power and bias transformers afford maximum flexibility with all types of circuits and tubes. For commercial and industrial application, CG and H grade components should be employed.

NOTE Standby service should not be obtained by interrupting high voltage center tap.

S-50	3000-2500-0-2500-3000	2625/2175	300 ma	G-12
S-51	Will supply any bias voltage from 15 to 100 volts DC within approximately 6% of desired value.		200 ma	G-5
S-52	Will supply any bias voltage from 75 to 400 volts DC within approximately 6% of desired value.		200 ma	G-7

* Based on two section filter for 200 ma and 300 ma units, single section filter for 500 ma units, both inductor input.

TRANSISTOR/FILAMENT SUPPLY TRANSFORMERS

Primary 115 V. 50/60 Hz, tapped on S-77, S-78 and S-79 for dual secondary voltages.

DC voltages are approximate, based on Silicon bridge rectifier and 10% choke drop in choke input filter circuit.

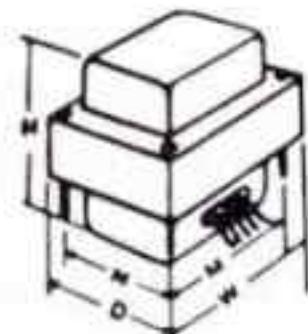

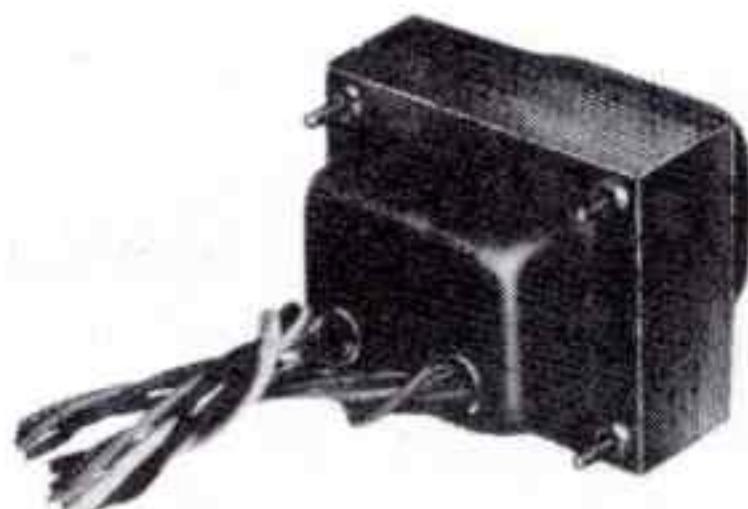

C in condenser input values is in 1000 mfd.

Type No.	Sec. V RMS	Sec. A RMS	SECS. IN PARALLEL				Case No.
			Choke Inp. DCV	DCA	Cond. Inp. DCV</		

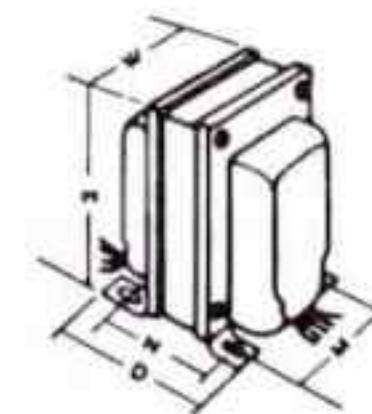

TRANSFORMERS FOR INDUSTRY WIDE APPLICATIONS

APPLICATION Industrial type. Primary 117 V 50/60 Hz.

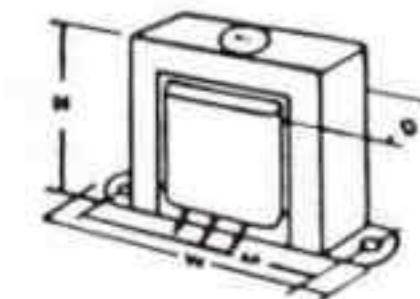

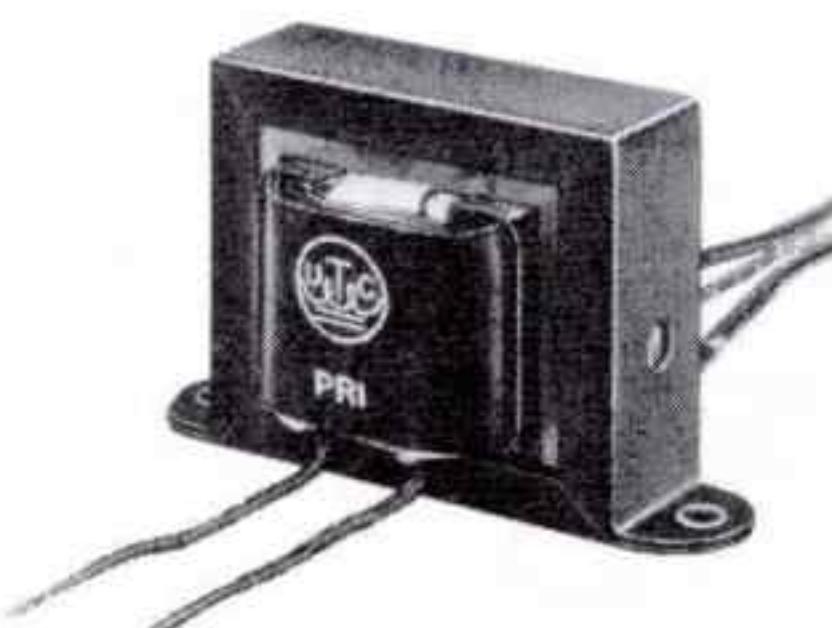

CONSTRUCTION Designed for low temperature rise. Vacuum sealed against humidity. Special impregnation prevents corrosion and electrolysis.

DOUBLE SHELL TYPE

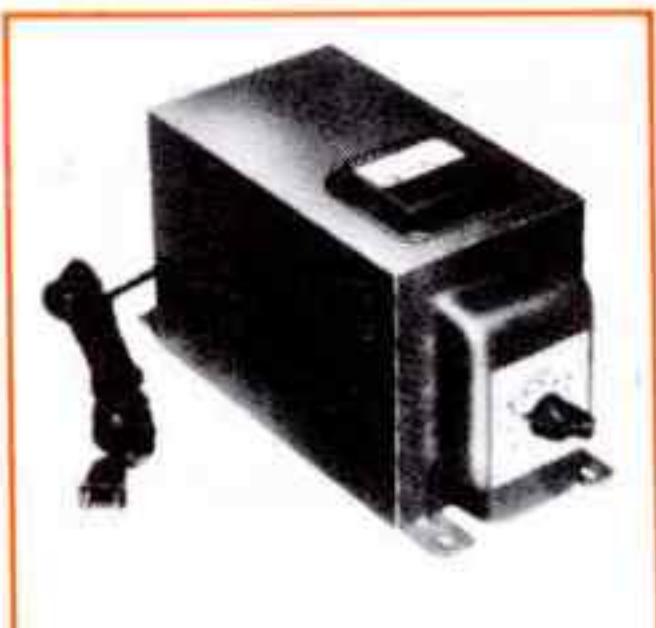

VERTICAL SHELL TYPE

CHANNEL TYPE

LINE VOLTAGE ADJUSTERS WITH METER

APPLICATIONS For 50/60 Hz service. Corrects fluctuation of line voltage. Adjust switch so meter reads at red line and output voltage is correct.

Nine tap switch provides for 60 to 140 V input on 115 V output model, and 160 to 240 V input on 230 V output model.

Has 6 foot input plug-in cord and output receptacle.

STANDARD PHOTOFAS TRANSFORMERS PHOTO AND LASER APPLICATION

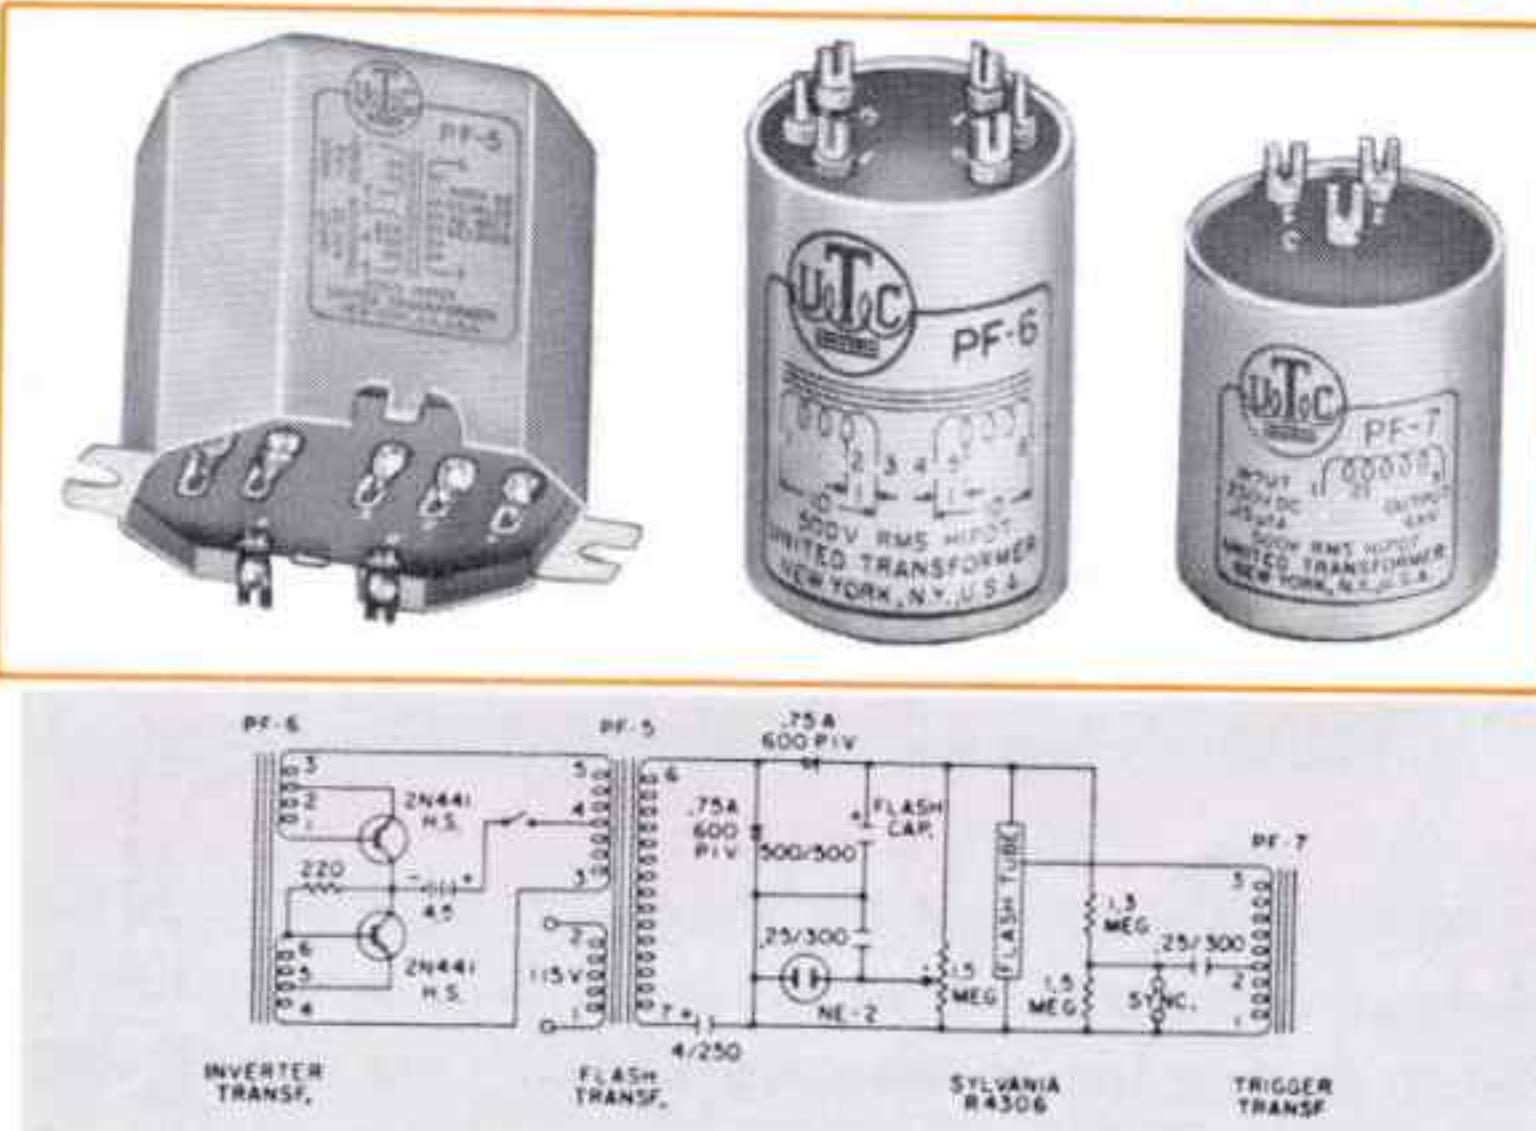

APPLICATION For either standard (Amglo type) or trigger (Sylvania type) multiple flash tubes. Circuit details included with transformer.

PF-1 Primary 115 volts, 50/60 Hz. Secondaries for power supply delivering 2200 volts DC to condenser up to 100 mfd. Compound sealed in G-3 case (see pg. 47).

PF-3 Trigger transformer 15 KV peak. 7/8" dia. x 3" long. Wt. 2 oz.

TRANSISTOR PHOTOFAS TRANSFORMERS

Miniaturized light weight units for transistor type photoflash supply.

PF-5 Primary for 115 volts 50/60 Hz or for 4 1/2 V battery switched by PF-6 inverter transformer. Output delivers 400 V DC when used in voltage doubler circuit to charge photoflash capacitor (typically 40 watt-Sec.). G-1 case (see pg. 47).

PF-6 Inverter transformer transforms 4 1/2 V DC from battery to input for PF-5 stepup transformer. Ouncer case (see pg. 17).

PF-7 Trigger transformer. Shorting .25 mfd. capacitor (charged to approx. 225 V DC) across terminals 1-2 produces 6 KV pulse at terminal 3 for triggering flash tube. 7/8" dia. x 1 15/16"; Wt. 1/2 oz.

ISOLATION TRANSFORMERS

APPLICATION Isolates line noise. AC-DC sets, etc. Excellent electrostatic shielding, 1500 volt breakdown test. Six foot cord and female receptacle, except R-77. For optimum isolation see HIT's (pg. 44).

Primary 110-120 Volts 50/60 Hz — Secondary 110-120 Volts. Except R-97 220 Volt Primary — 120 Volt Secondary

Type No.	Rating Watts	L	W	H	Mtg. Dim.	Wt. Lbs.
R-72	40	3 1/8	2 5/8	3 1/8	2 x 1 7/8	4

R-74	250	4 7/8	3 7/8	4 5/8	3 x 3 1/2	12
R-75	600	7 3/8	3 7/8	4 5/8	3 x 5 7/8	20
R-76	1200	8 1/2	4 1/2	6 1/8	3 5/8 x 6 5/8	30
R-77	2500	12	7	9	6 x 11	70
R-97	250	4 7/8	3 7/8	4 5/8	3 x 3 1/2	12

SIGNALLING AND CONTROL TRANSFORMERS

Primary 110-120 Volts, 50/60 Hz — Secondary 4/8/12/16/20/24 Volts.

APPLICATION Operating relays, sirens, horns, gongs, etc. from 115 V 50/60 Hz line. Four secondary terminals providing 4, 8, 12, 16, 20, and 24 volt output.

VOLT AMPERE RATING Based on 24 V secondary tap, corresponding reduction at lower voltages.

TERMINATIONS Primary: Underwriters' Approved leads. Secondary: Screw type binding posts.

Type No.	Rating Watts	L	W	H	Mtg. Dim.	Wt. Lbs.
SC-3	50	3	3 1/16	3 1/16	1 3/4 x 2 1/4	3

Pulse Characteristics

- 1 Pulse width
- 2. Rise time
- 3. Fall time
- 4. Droop
- 5. Overshoot
- 6. Backswing
- 7. Repetition rate

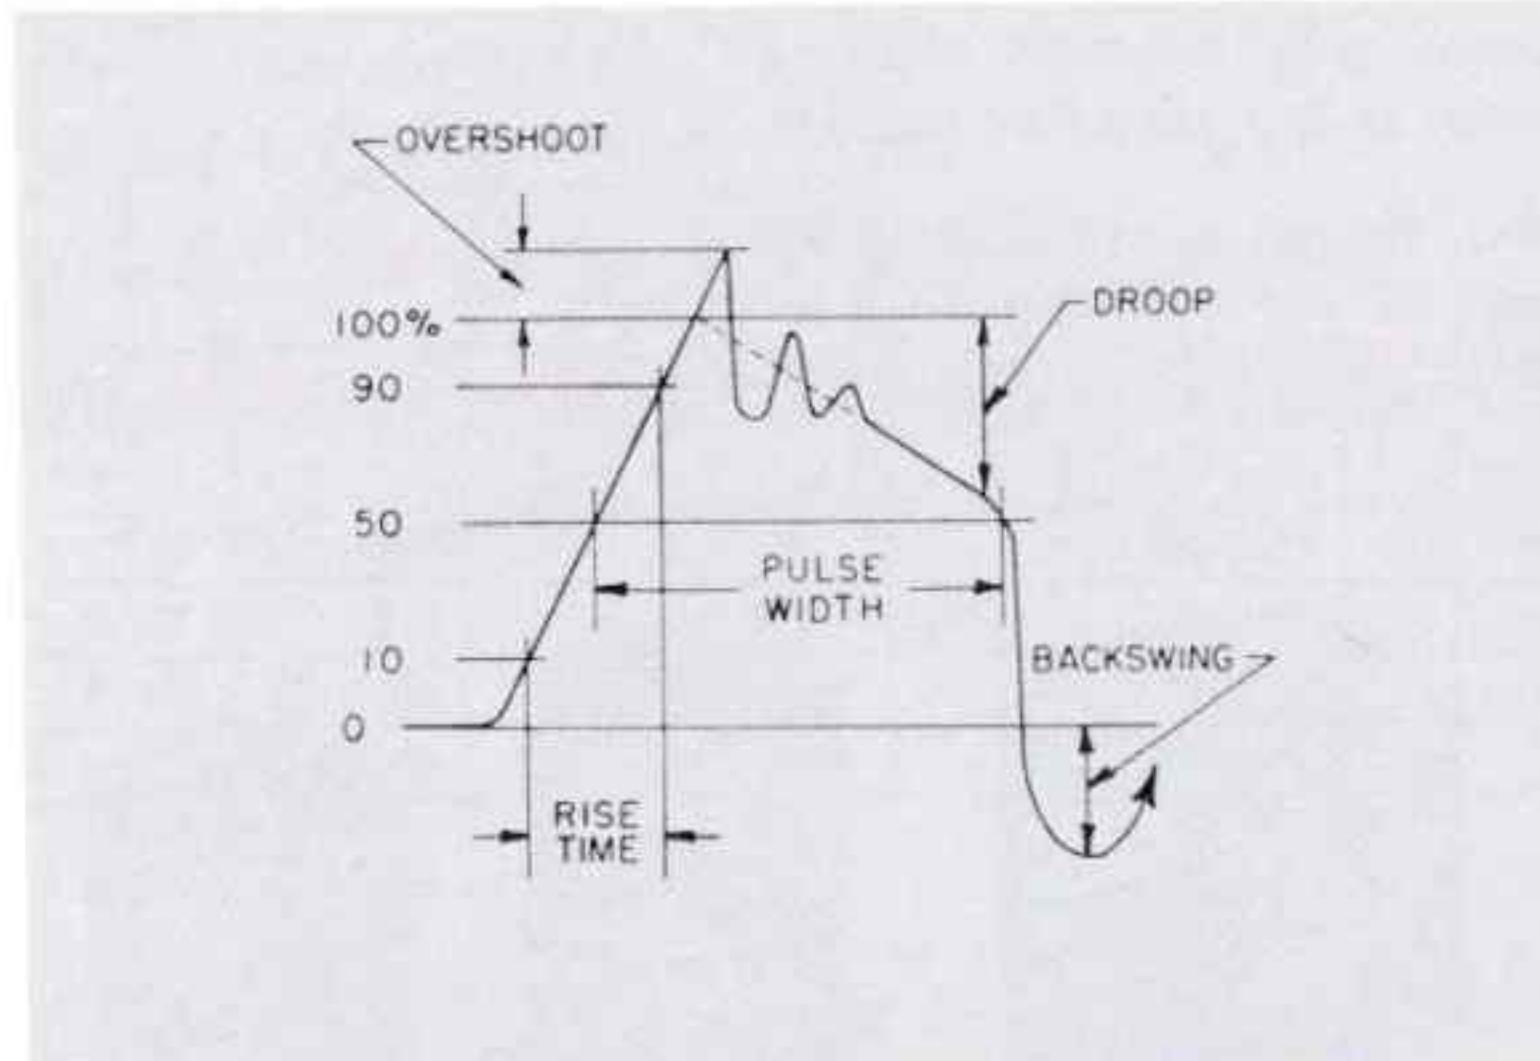

APPLICATION

Pulse transformers can be classified into coupling or impedance matching or acting in a circuit to form a pulse (blocking oscillator with tube or transistor).

In the pulse generating application, the characteristics of the circuit elements other than the transformer are effective in determining the pulse characteristics. Consequently, the design engineer must know the circuit in which it will be used.

The best way of specifying a coupling application is to state the source and load impedance, the voltage levels, the repetition rate, and the nature of the desired output pulse in pulse parameters.

As can be seen below the given transformer will have the same rise time regardless of the pulse width impressed on it. The droop characteristics, in percent, will be a linear function

of the pulse width. A given transformer, having a 10% droop at 1 microsecond, will have a 20% droop at 2 microseconds.

The repetition rate and the pulse width determine the duty cycle which the transformer will see. This is important in the design for temperature rise consideration. Core loss energy is lost on each pulse due to eddy currents and hysteresis. The repetition rate determines the power loss in the core as well as in the windings. The voltage level as well as the pulse width determines the flux density of the transformer. This is usually stated as the ET constant and expressed in volt-microseconds.

A transformer of a given ET Constant can be used for wider pulse widths and lower voltage levels or vice versa, within the insulation working voltage capability of the transformer.

NEW HIGH PERFORMANCE PULSE TRANSFORMERS BIT-P™ LINE

PACKAGING Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions, and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

RELIABILITY Cylindrical bobbin-winding techniques eliminate corner stress normally found in fine-wire windings of conventional rectangular structures.

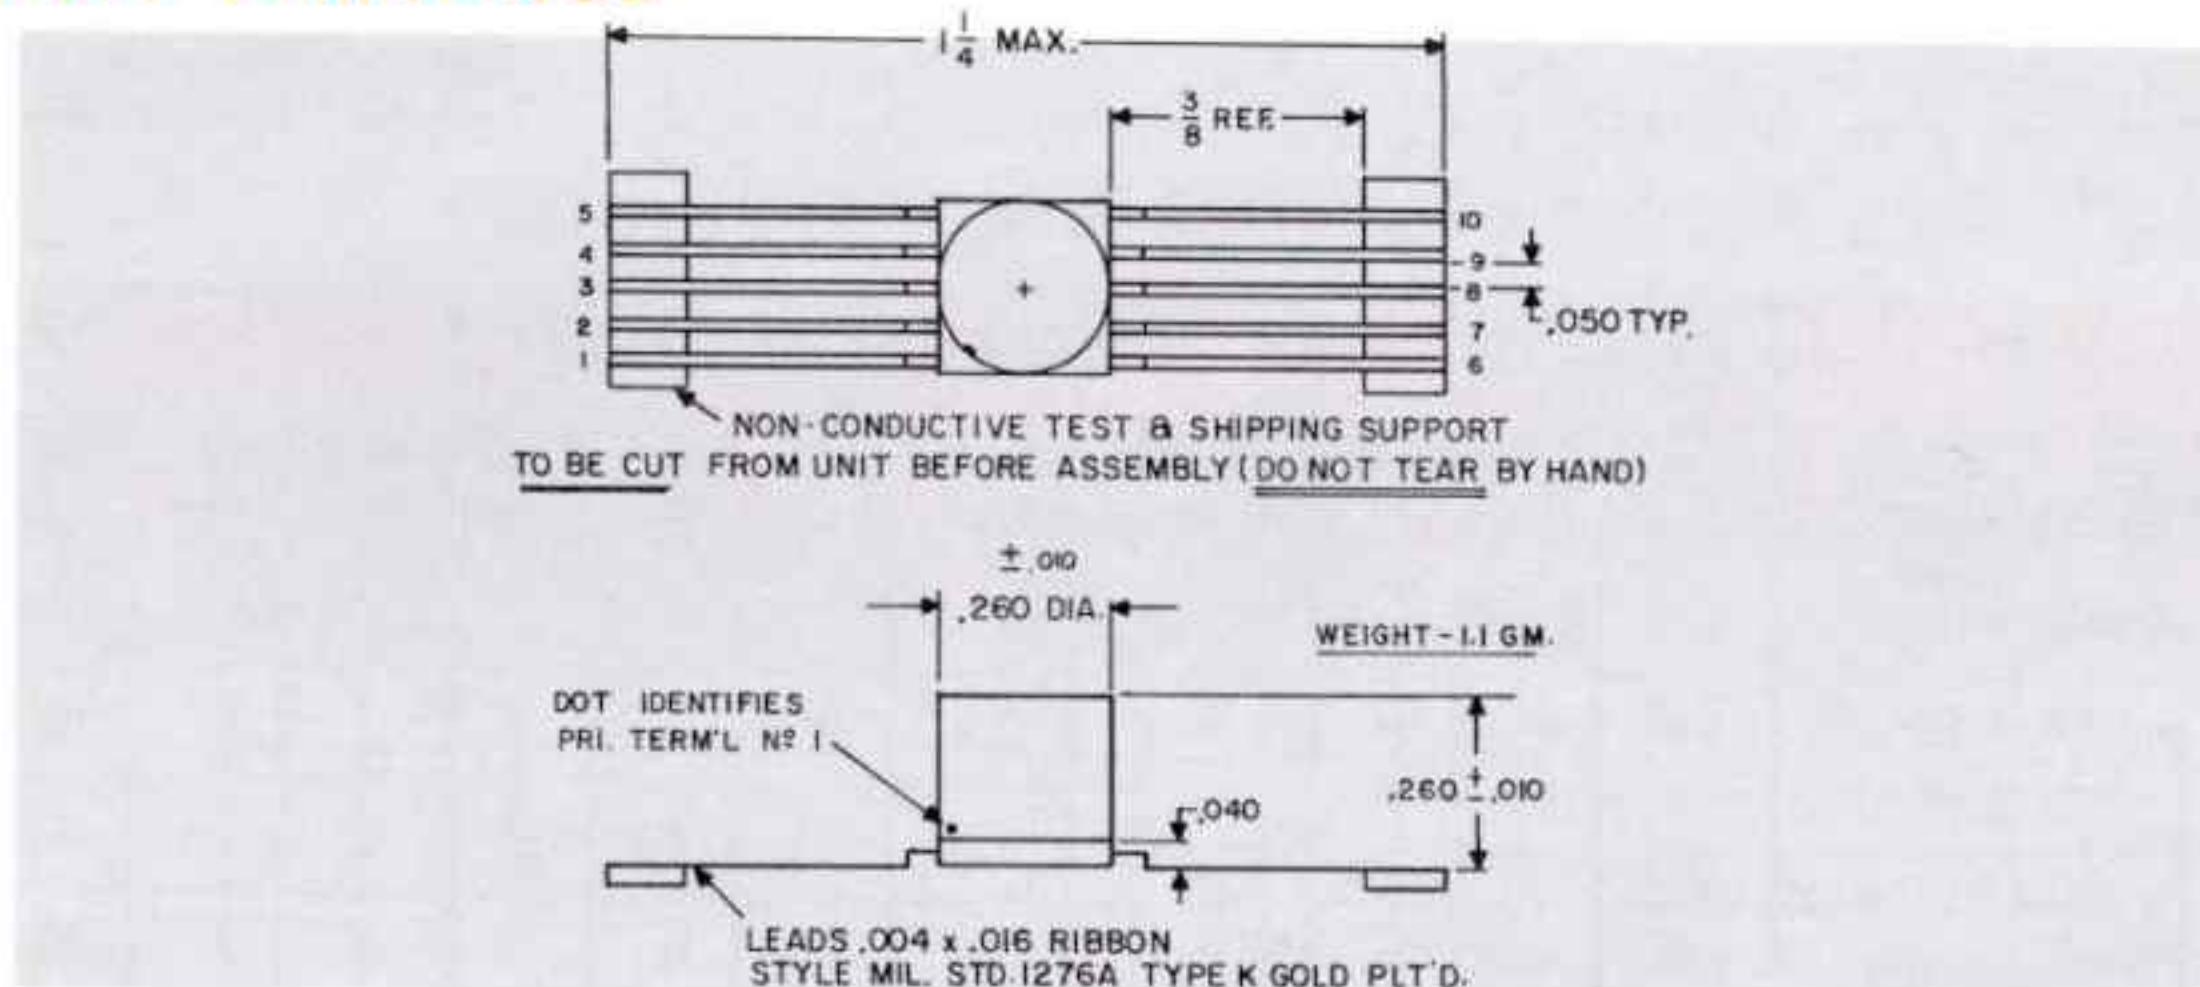

Lead arrangements and terminations have been designed to maximize reliability under thermal shock and temperature cycling.

FLEXIBILITY Stock units are designed for the standard blocking oscillator circuit shown as well as for coupling application. By interconnecting windings, a variety of primary to secondary ratios may be obtained.

SPECIALS BIT-P's not found in stock line will be designed to customers' requirements.

- Special electrical parameters
- 10 or more leads
- Operation to 130°C per MIL Class S.

TRW TRANSFORMERS: DESIGNER'S CHOICE, DISTRIBUTOR SERVICE

There's no compromise on specs, reliability, or delivery when you use TRW/UTC transformers. Our brand new 48-page Expander Designer's Guide lists all UTC audio transformers by impedance, reducing your matching and finding task to a simple look-up. The TRW/UTC full audio catalog is included, too, so you can get exactly what you need at the right price.

And there's no delay. TRW/UTC has **real** local inventories. We also have application assistance. And if you need minor mechanical changes, we can still meet your needs quickly, through our distributors. They're responsive!

In short, we have the fastest service. And we don't sacrifice reliability, quality or technology. Write for your copy of our designer's guide. You'll find out how to get the quickest delivery on the industry's broadest line.

GENERAL INFORMATION ON HIGH Q INDUCTORS

Over 40 years of specialization in High Q Inductors are reflected in the superior Q and temperature stability of the molybdenum permalloy dust toroid, ferrites, and laminated structures produced by UTC today. Range of application is from DC to 30 MHz.

While this catalog lists 24 different types of stock inductors, special custom designs produced to customers' specifications are available on special order. Characteristics such as taps, additional windings, special adjustments such as in a resonant circuit, higher voltage capability, inductance adjusted with DC, special mechanical configurations, even better temperature stability than our stock items, etc. are available to customers' requirements.

TECHNICAL DATA

While the toroidal coil is superior for frequencies above 1 kHz, the laminated structure is superior for lower frequencies. The ML, MO, MQM, and MQL use a hum-reducing lamination structure and, in addition, the ML, MQM, and MQL are in hipermalloy shield cases.

The toroidal coils MS, MM, MH, MW, FE, FI, FO, MQA, MQB, MQE, MQD, HQA, HQB, HQC, HQE have extremely low hum pickup due to the symmetrical winding on the toroidal core.

All stock inductors are measured at 0 DC. The maximum DC listings are for approximately 5% drop in inductance, and negligible heat rise. The typical curves of inductance variation with AC or DC currents, illustrated on the following pages, best show the range of operation for a particular inductor. The excitation is plotted in milliamperes $\times \sqrt{mH}$. For example, the 100 mH MS toroid (MS-100) with 10 ma of DC flowing has an excitation factor of $10 \text{ ma} \times \sqrt{100 \text{ mH}} = 100$, and the curve shows that approximately 90 mH will be measured with 10 ma DC.

In the curves shown below, the solid line represents a stock series, the dotted line represents a few of the special capabilities of UTC in the specific stock size.

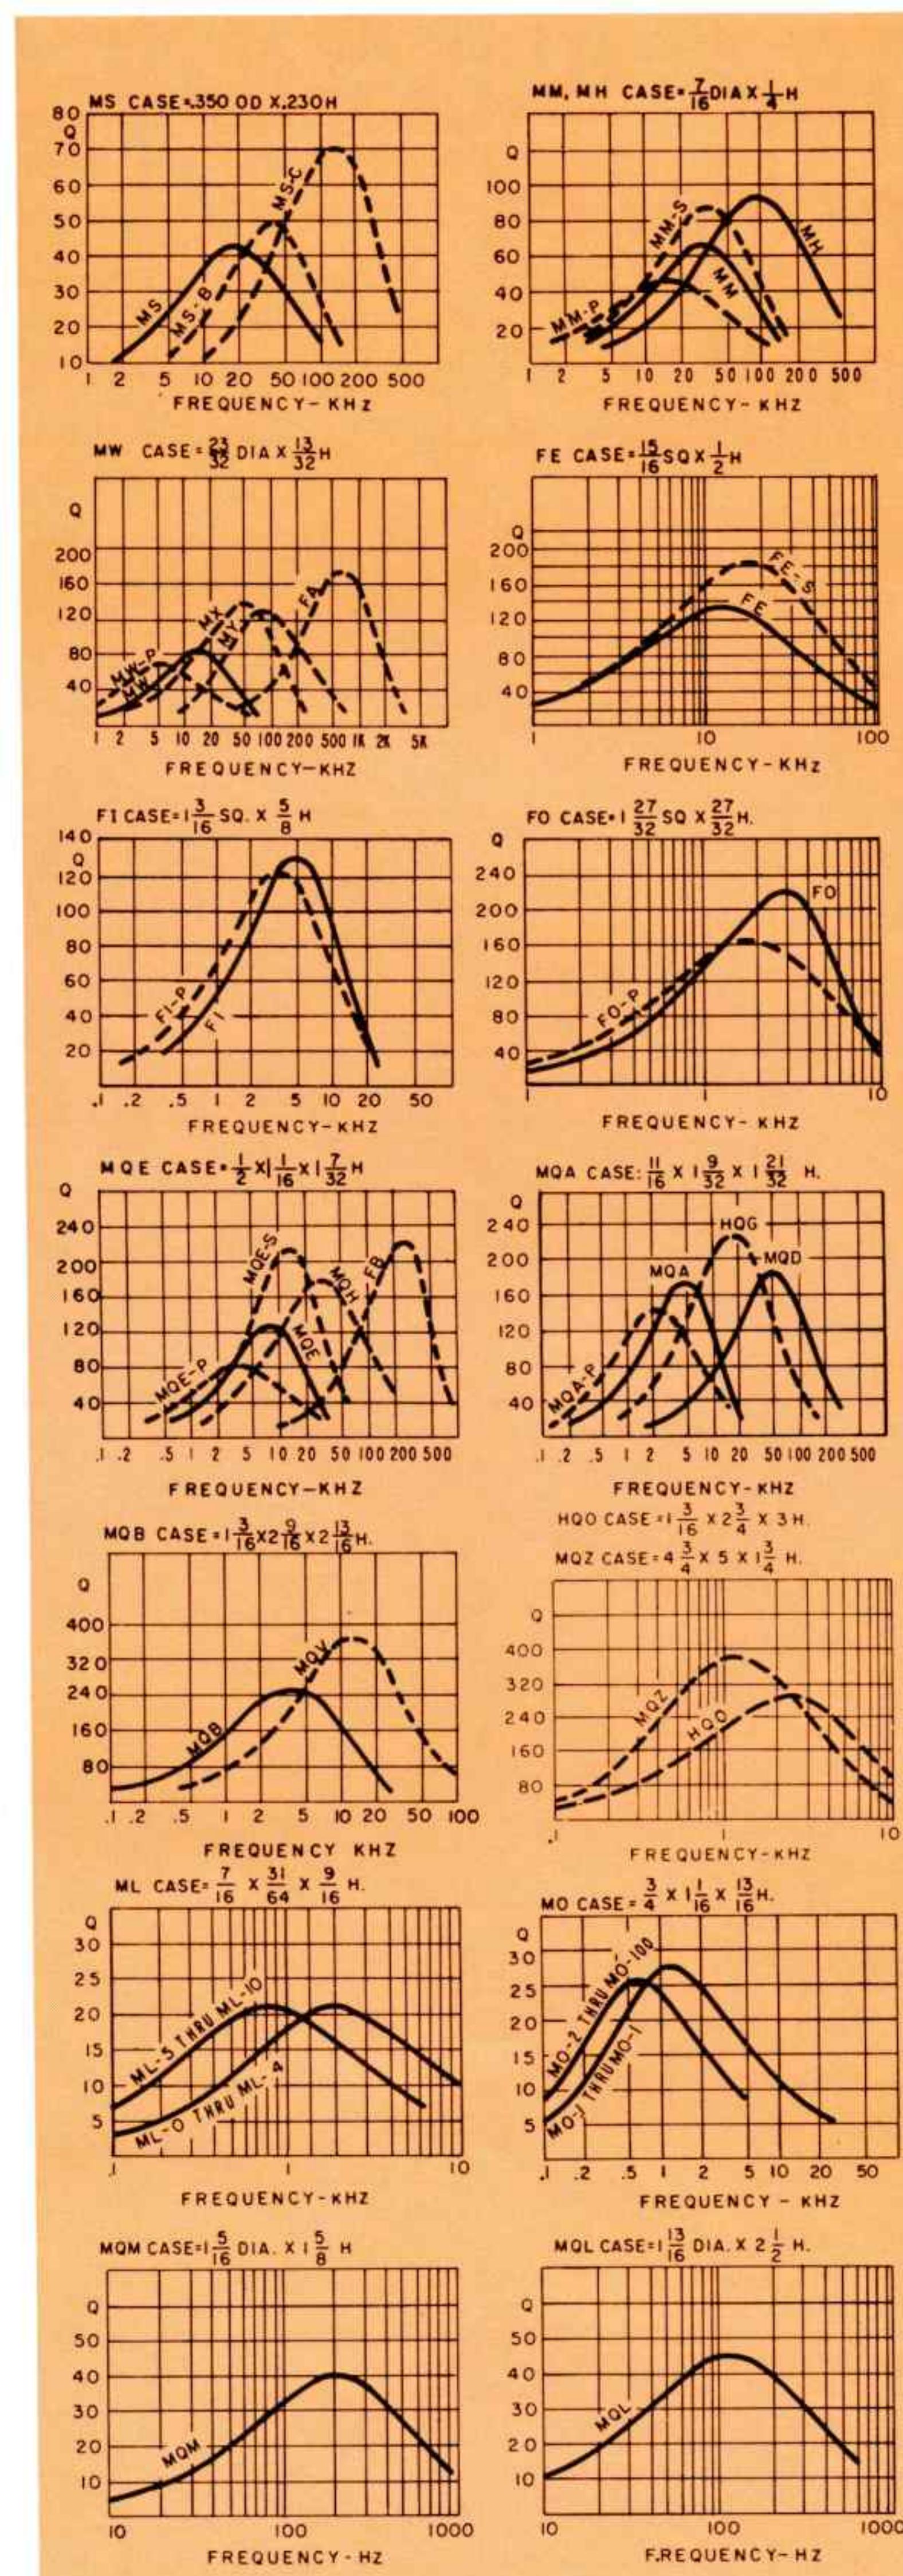

Since these high Q coils will saturate before any appreciable temperature rises occur, heating is usually not a problem. A general rule would be that 4 times the DC listings may be applied without any detrimental heating due to copper loss.

For variable inductors such as HVC, TVC, HVV and VIC, the CD values listed apply at the mean to minimum inductance settings only. The maximum inductance cannot be obtained with that amount of DC current flowing.

Temperature stability of all UTC inductors is excellent. Guaranteed limits and typical curves of inductance variation with temperature are shown for most types.

Engineering, laboratory, and production facilities are available for full engineering discussion, sampling, and large quantity production to meet special requirements.

Intermediate inductance values in an existing stock toroidal series are available, priced as the next higher inductance unit.

MINIATURE HIGH Q TOROIDAL INDUCTORS (continued)

PACKAGING Hermetically sealed. Metal cased symmetrical toroids.

ADJUSTMENT MQA-1 thru 14, TQA-1 thru 14, MQD, MQE, $\pm 1\%$ @ 1 V, 1 kHz. MQA-15 thru 20, TQA-15 thru 20, MQB-1 thru 12, $\pm 1\%$ @ 1 V, 500 Hz. MQB-13 & 14, $\pm 1\%$ @ 1 V, 400 Hz.

MIL SPECS To complete MIL-T-27C Specs. Mil Type TF4RX20YY. See pages 79, 80.

APPLICATIONS TQA similar to MQA but centertapped for oscillator applications, impedance matching, etc. Maximum Q approximately 5 kHz. MQD maximum Q approximately 50 kHz. MQB maximum Q approximately 3 kHz. MQE maximum Q approximately 7 kHz.

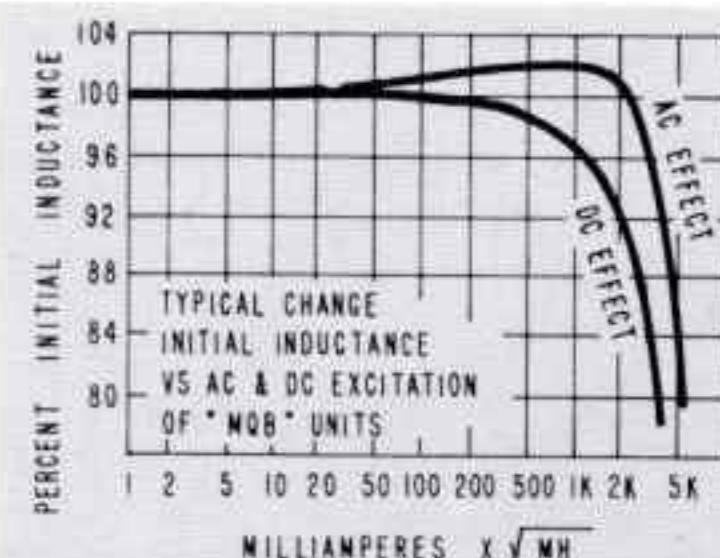

TEMPERATURE STABILITY All from -55° to $+105^\circ$ C. MQA & TQA, less than 1%. MQB, $\pm 1.5\%$. MQD, $\pm .5\%$. MQE, $\pm 1\%$.

MQB TYPES

MQE-16	4 Hy	5	850

VARIABLE INDUCTORS

PACKAGING Hermetically sealed. Metal encased. Inductance variation controlled by adjustment screw on top of case. Range is covered in 900° rotation. Setting is positive. TVC is tapped version of HVC, with taps at 30% and 50% of total turns.

APPLICATION Oscillators, equalizers, filters, impedance matching, phase inversion, tuned circuits, etc.

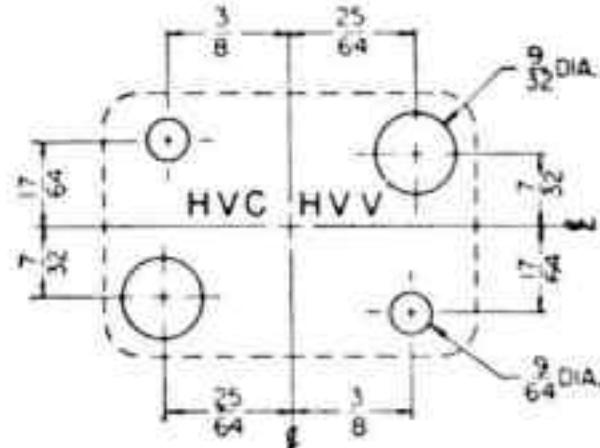

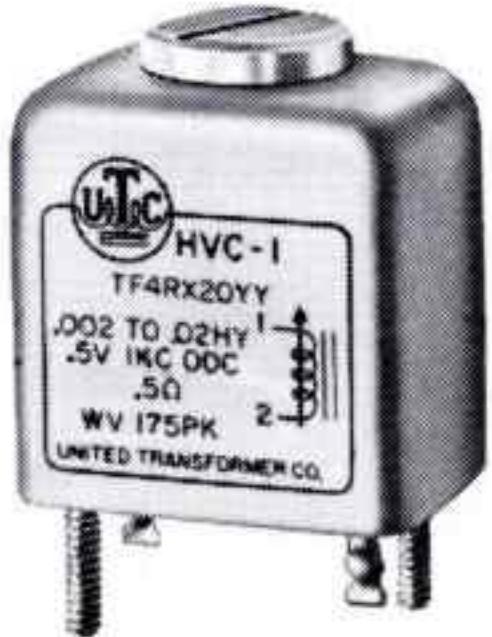

RANGE HVC, TVC +200% -70% of nominal value. HVV vernier adjustment. Variation is $\pm 10\%$ of nominal value.

MIL SPECS To complete MIL-T-27C Specs. Mil Type TF4RX20YY. See pages 79, 80.

TEMPERATURE STABILITY At mean inductance, from -55°C to +105°C. HVC & TVC: $\pm 1.5\%$. HVV: $\pm 1\%$.

WIDE RANGE

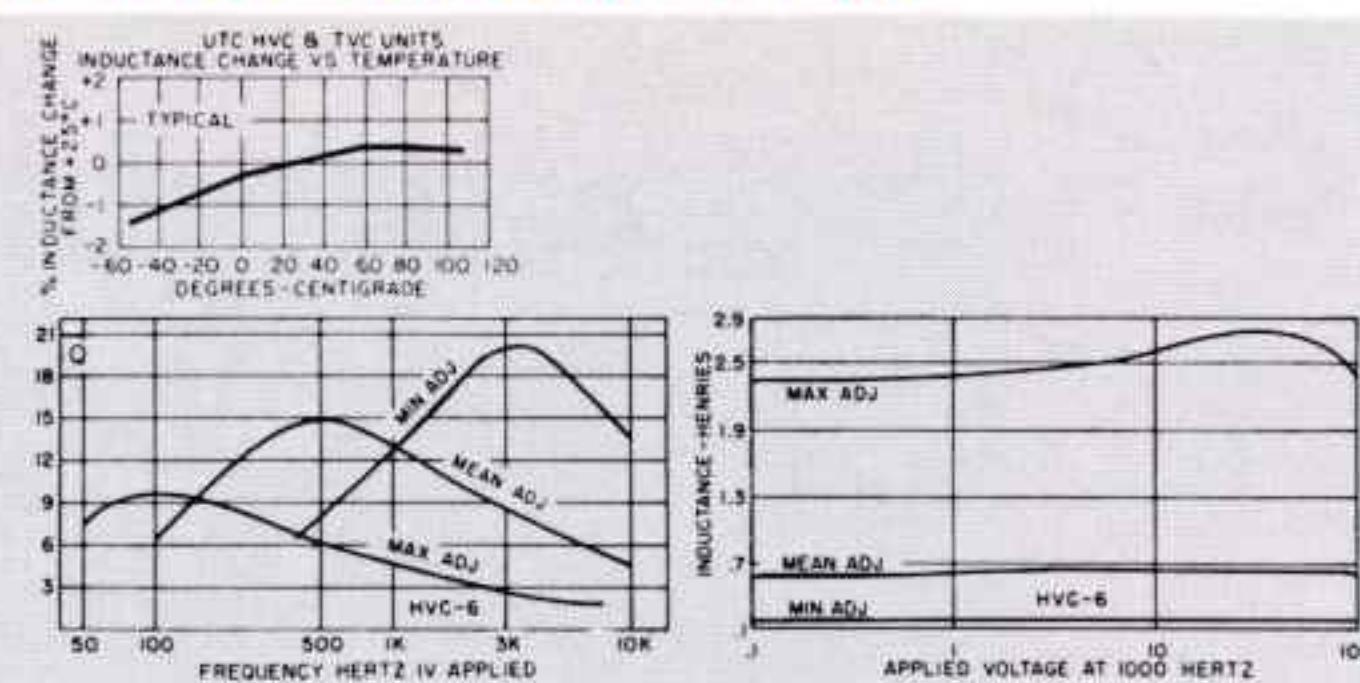

HVC AND HVV

Length 1 1/8"
Width 25/32"
Height* 1 1/2"
Screws 4-40
Weight 2 oz.

* Height includes adjustment screw

VARIABLE INDUCTORS (continued)**WIDE RANGE — VIC VARIDUCTOR™**

PACKAGING Rugged die cast case. Inductance variation controlled by set screw in side of case. Range is covered in 600° rotation. Setting is positive.

VIC CASE

Length	1 15/32"
Width	1 1/4"
Height	1 7/16"
Mounting	13/16" x 2 5/32"
Screws	4-40
Cutout	1 x 1/2"
Weight	5 1/2 oz.

**HIGH Q PRECISION INDUCTANCE DECADES**

PACKAGING Compact, rugged, die-cast case with control on sloping panel. Low capacity, low contact resistance switch.

APPLICATION Design and experimental work with tuned circuits, wave filters, and equalizers.

CHARACTERISTICS Special winding techniques plus molyb-

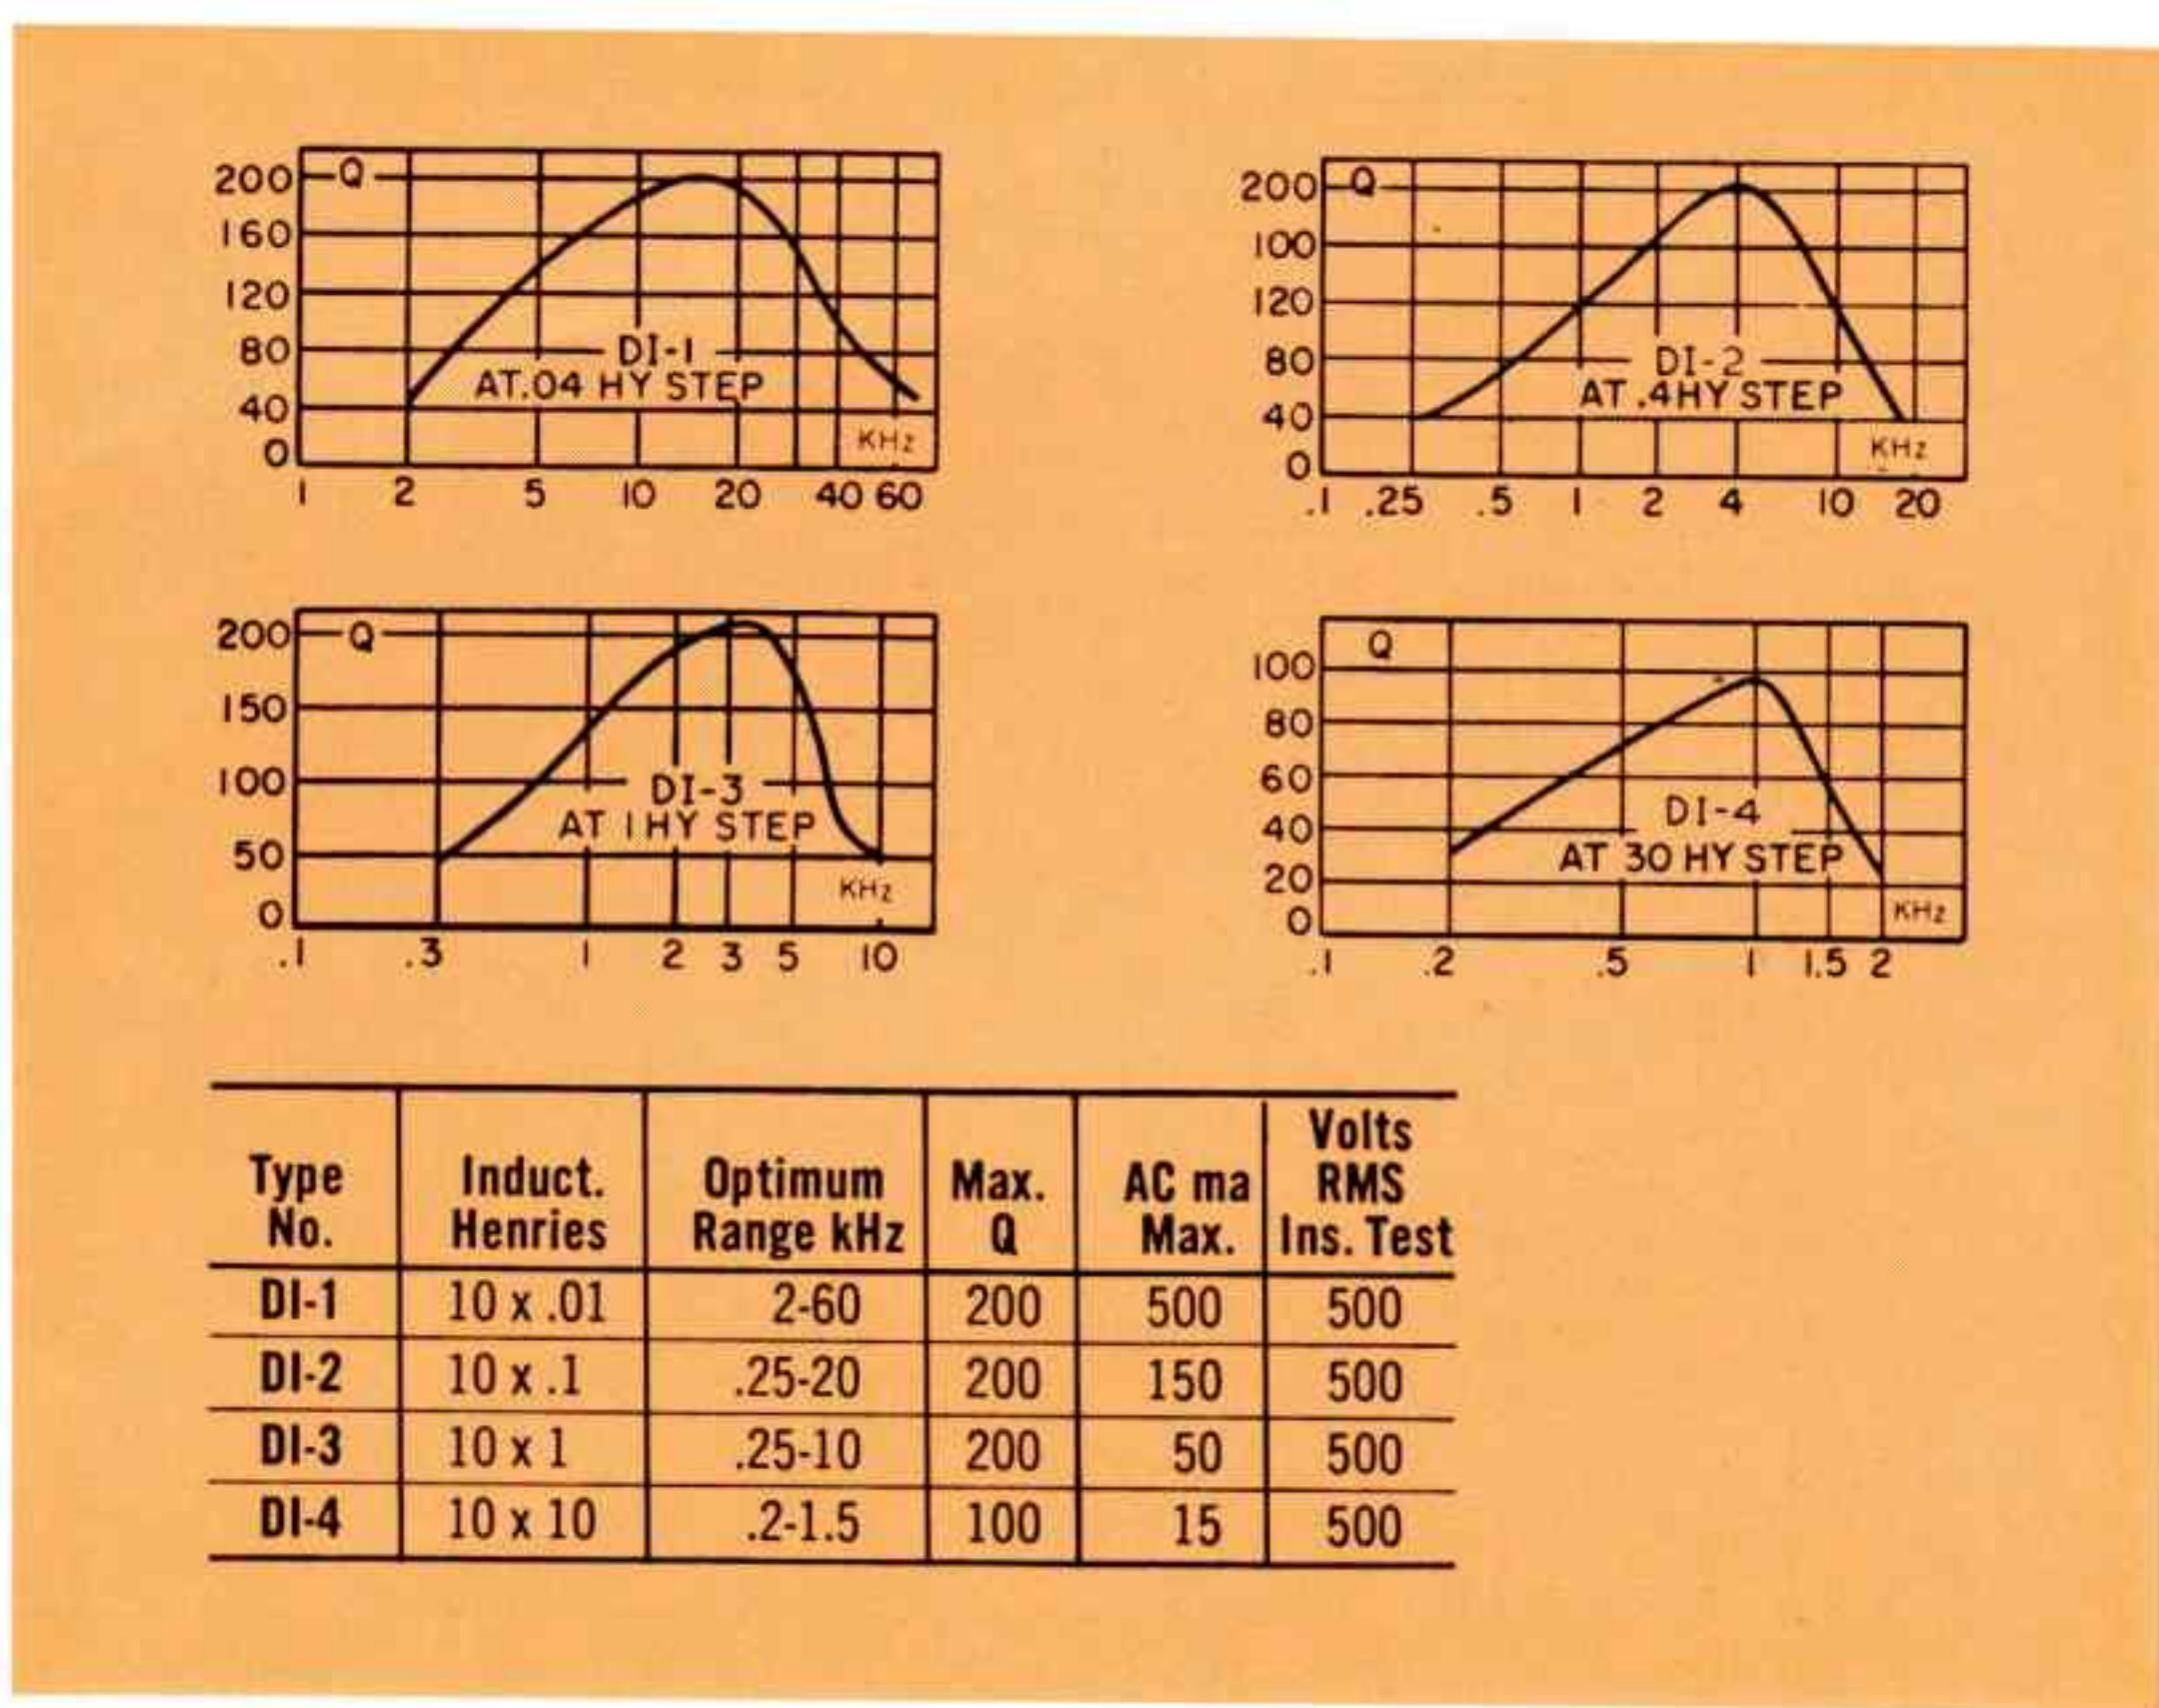

dium permalloy cores provide high Q, excellent voltage, temperature stability, and high self-resonance frequency.

NOTE Inductance values are laboratory adjusted to better than 1% precision, with hand-written calibration recorded on base.

DI CASE

Length	4 1/2"
Width	4 3/8"
Height	2 3/8"
Weight	2 lbs.

TOROIDAL INDUCTORS

PACKAGING Hermetically sealed. Metal cased, symmetrical toroids.

MIL SPECS To complete MIL-T-27C Specs. Grade 4, Class R, Life X. See pages 79, 80.

HQA/HQC CASE

Diameter 1 $\frac{1}{16}$ "
 Height 1 $\frac{1}{16}$ "
 Mounting 1 $\frac{1}{16}$ "
 Screws 6-32
 Cutout $\frac{5}{16} \times 1\frac{1}{16}$ "
 Weight 5 oz.

**HQB CASE**

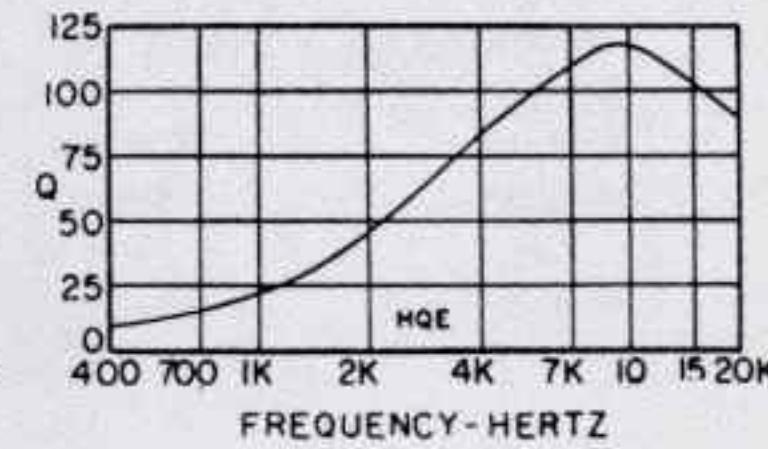

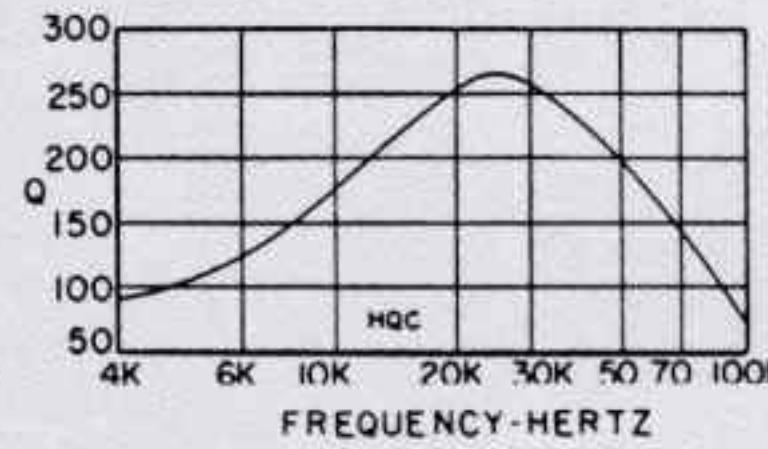

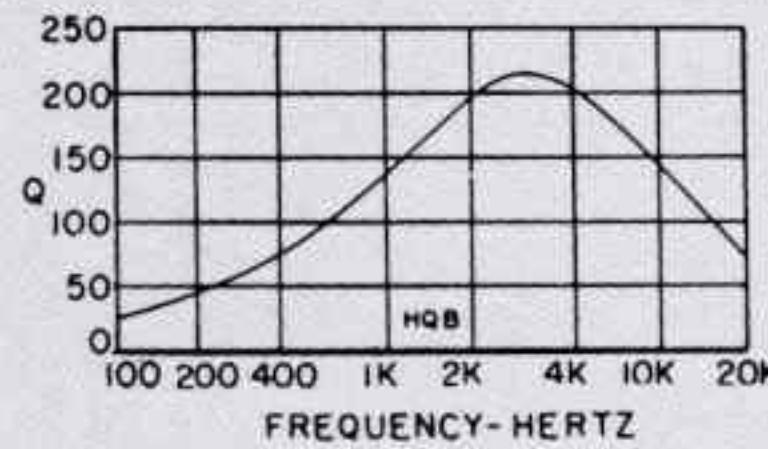

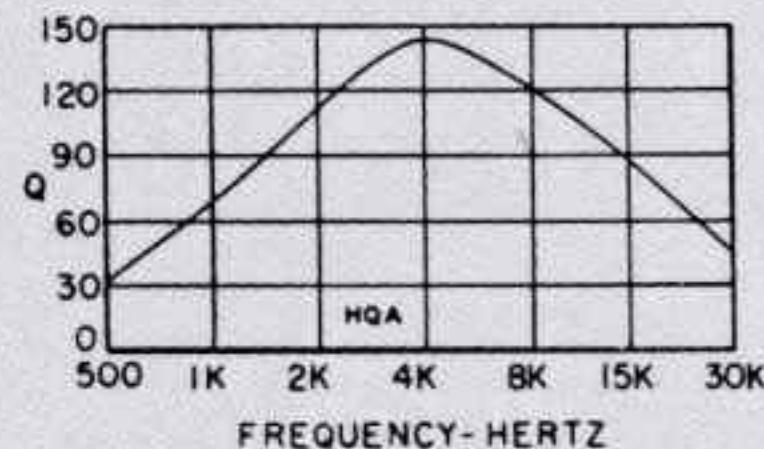

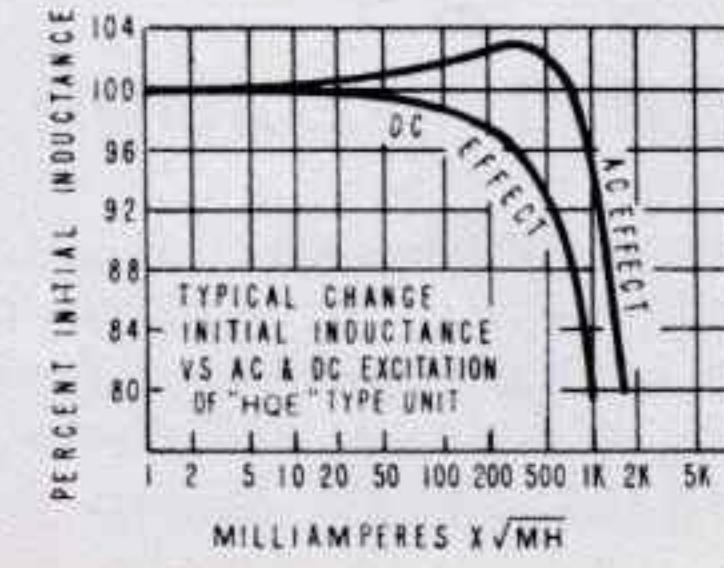

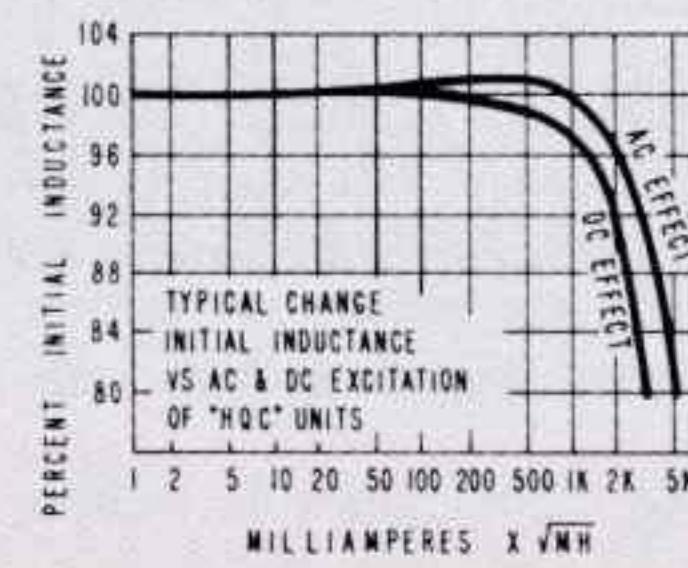

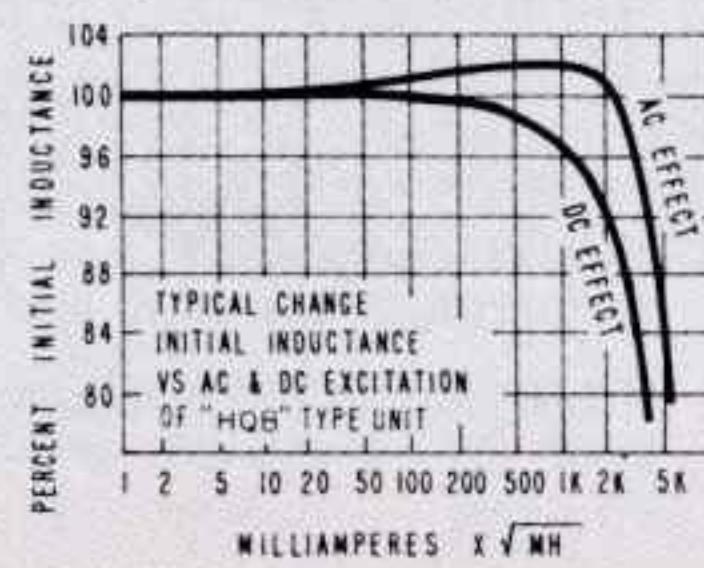

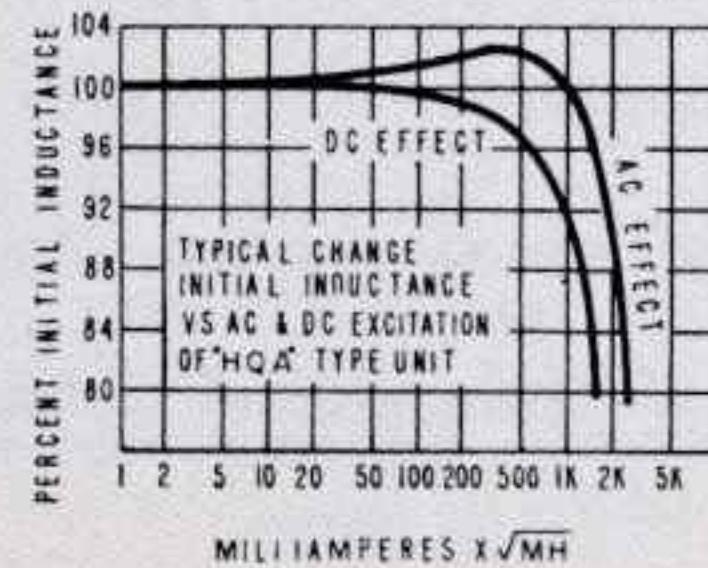

Length 2 $\frac{5}{8}$ "

GENERAL INFORMATION ON ELECTRIC WAVE FILTERS

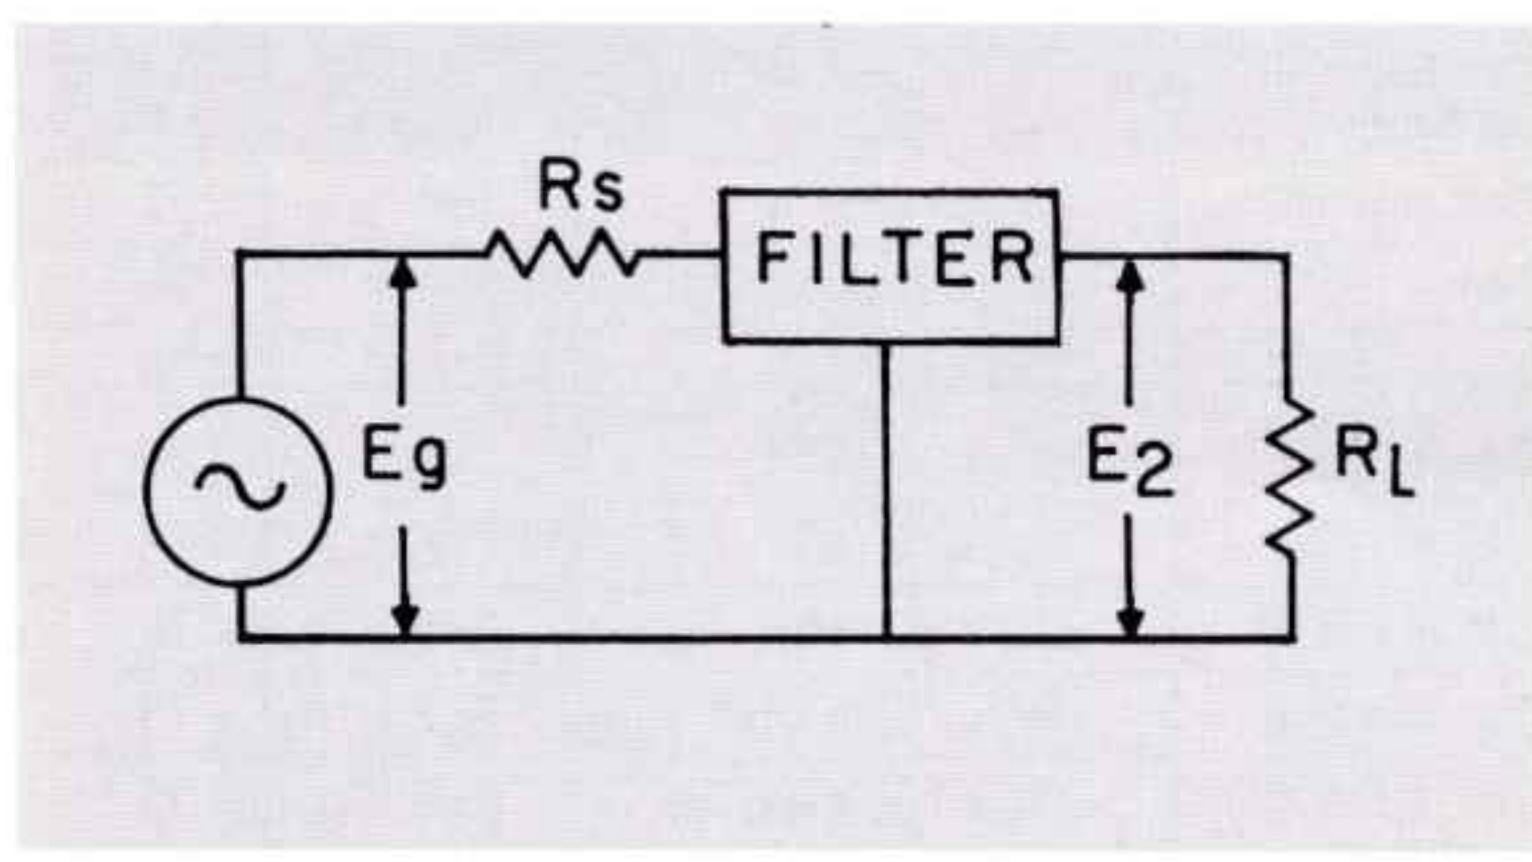

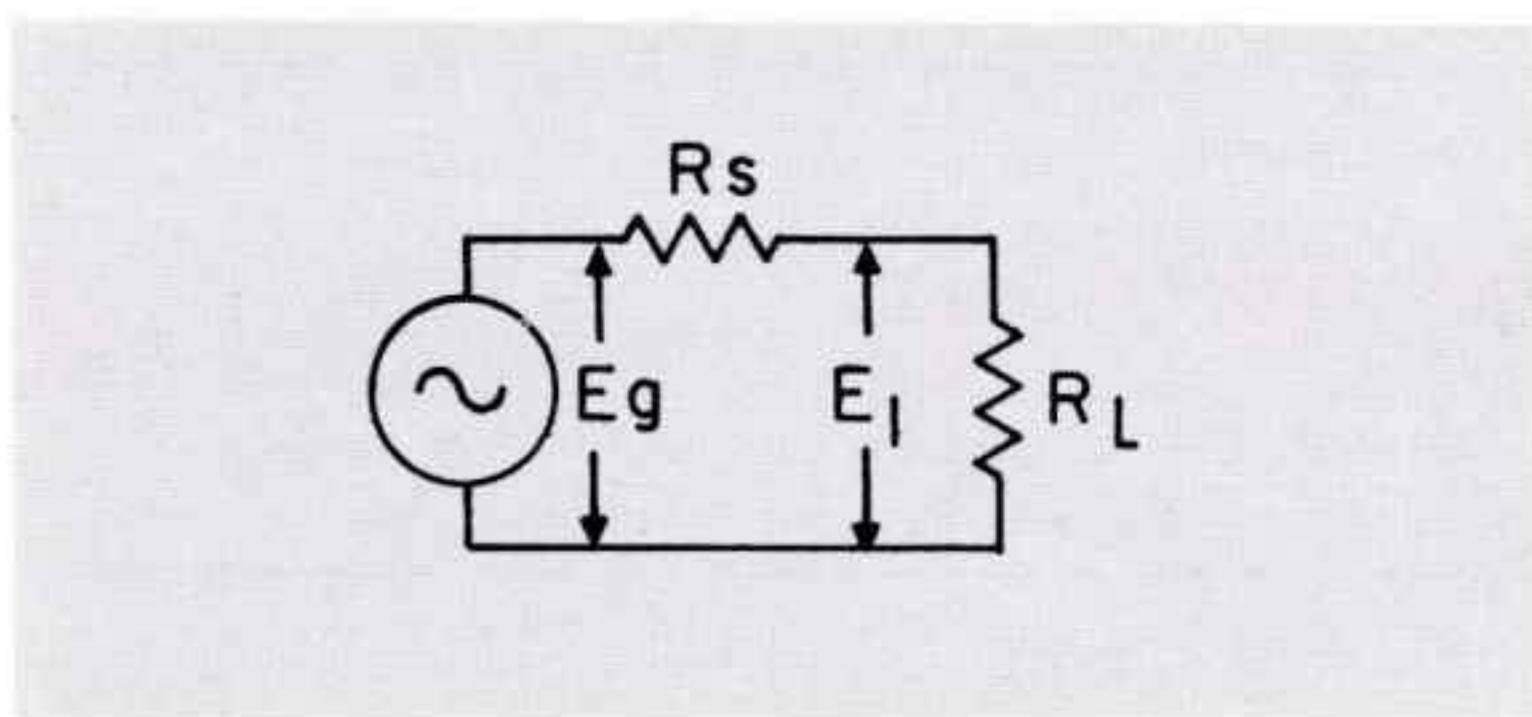

Almost 40 years of specialization in selective networks, from image parameter design to modern network synthesis are reflected in the superior performance, miniaturization, stability, and reliability of the electric wave filters produced by UTC today.

Because of the tremendous variation in requirements of frequency, band width, impedance, shape factor, size configuration, and other special characteristics such as envelope delay distortion, and return loss, UTC's catalog items are only a portion of the filters made. Special "custom" designs to customers' specifications range from DC to 30 MHz, from a volume of less than 0.1 cubic inches to more than 250 cubic inches. They cover applications such as telephone, telegraph, telemetering, multiplexing, carrier elimination and restoration, etc.

TECHNICAL

UTC follows the standard method of measurement of insertion loss and attenuation as defined in MIL-F-18327C, the military specification for filters.

Insertion Loss is defined as the ratio of power delivered to the load before insertion of the filter, to the power delivered to the load after insertion of the filter.

$$IL_{in} \text{ db} = 20 \log_{10} \frac{E_1}{E_2}$$

where

R_s = Source resistor.

R_L = Load resistor.

E_g = Generator voltage — must be maintained constant for all measurements. The generator impedance should be less than 10% of the source impedance.

E₁ = The load voltage with the filter not in the circuit.

E₂ = The load voltage with the filter in the circuit.

Attenuation, the relative transmission loss, is measured as the ratio of output voltage (E₂) at the reference frequency to the output voltage (E₃) at the test frequency.

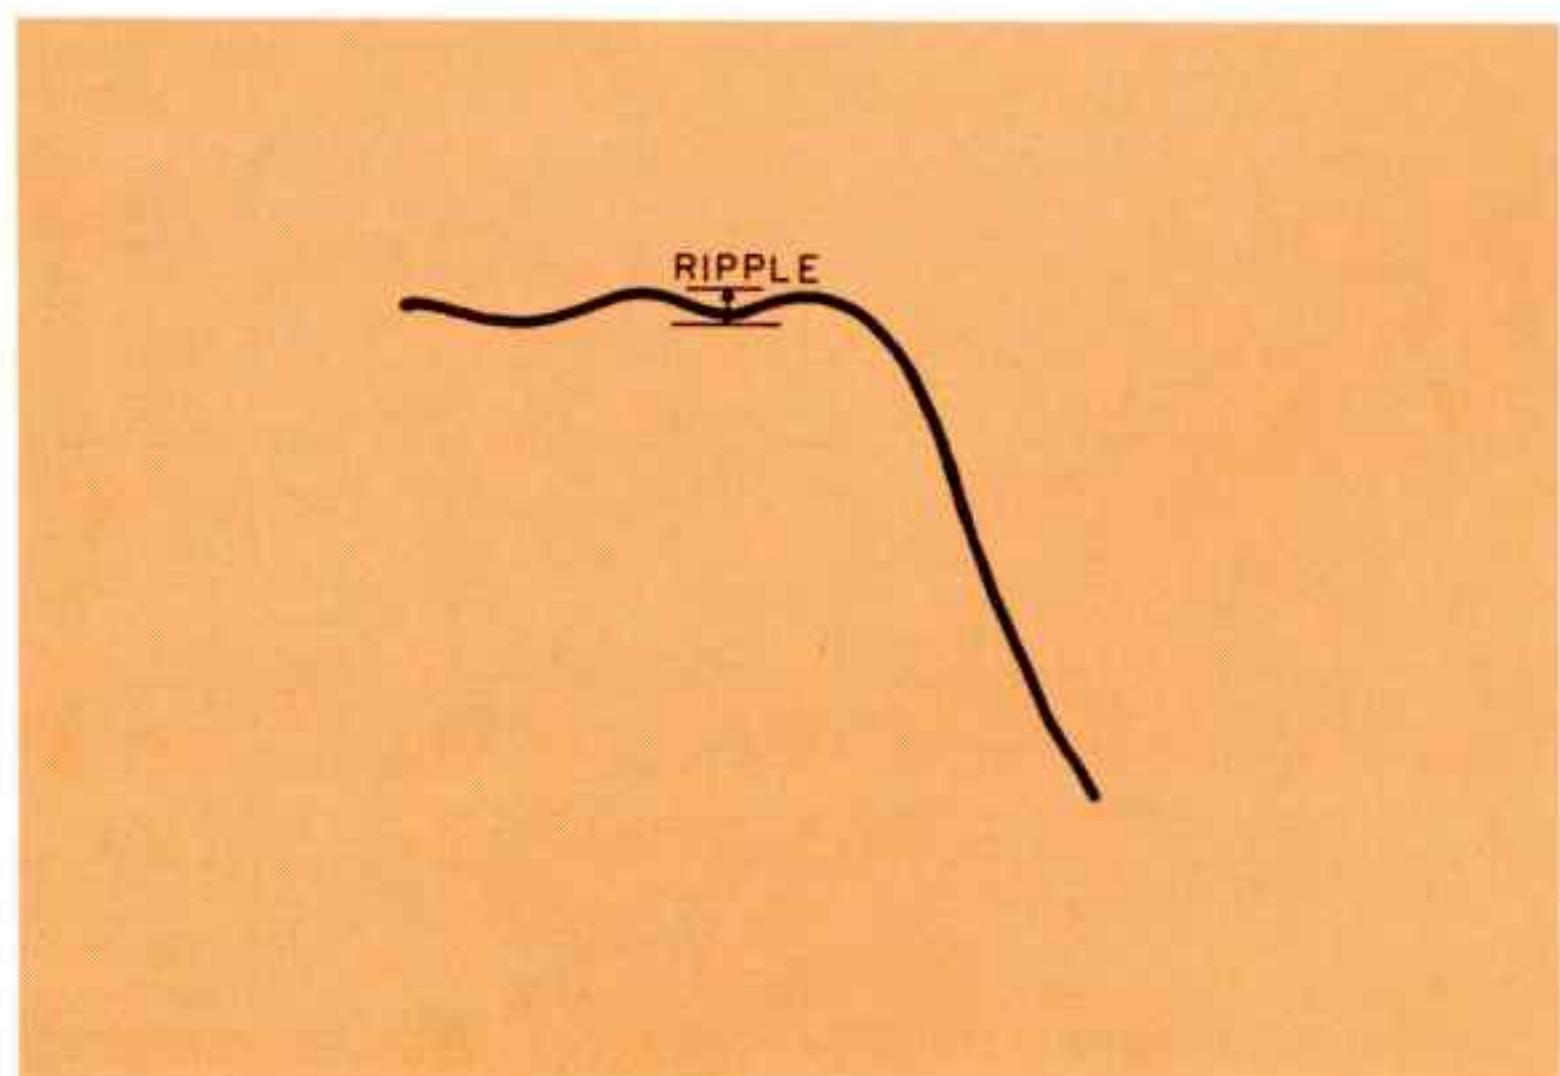

$$\text{Attenuation in db} = 20 \log_{10} \frac{E_2}{E_3}$$

Reference Frequency is that frequency at which the insertion loss is measured and to which all attenuation measurements are referred. In band pass filters, the reference frequency may be the center of the pass band or the frequency at which maximum output occurs. In low pass and high pass filters the reference is a frequency well within the flat portion of the pass band.

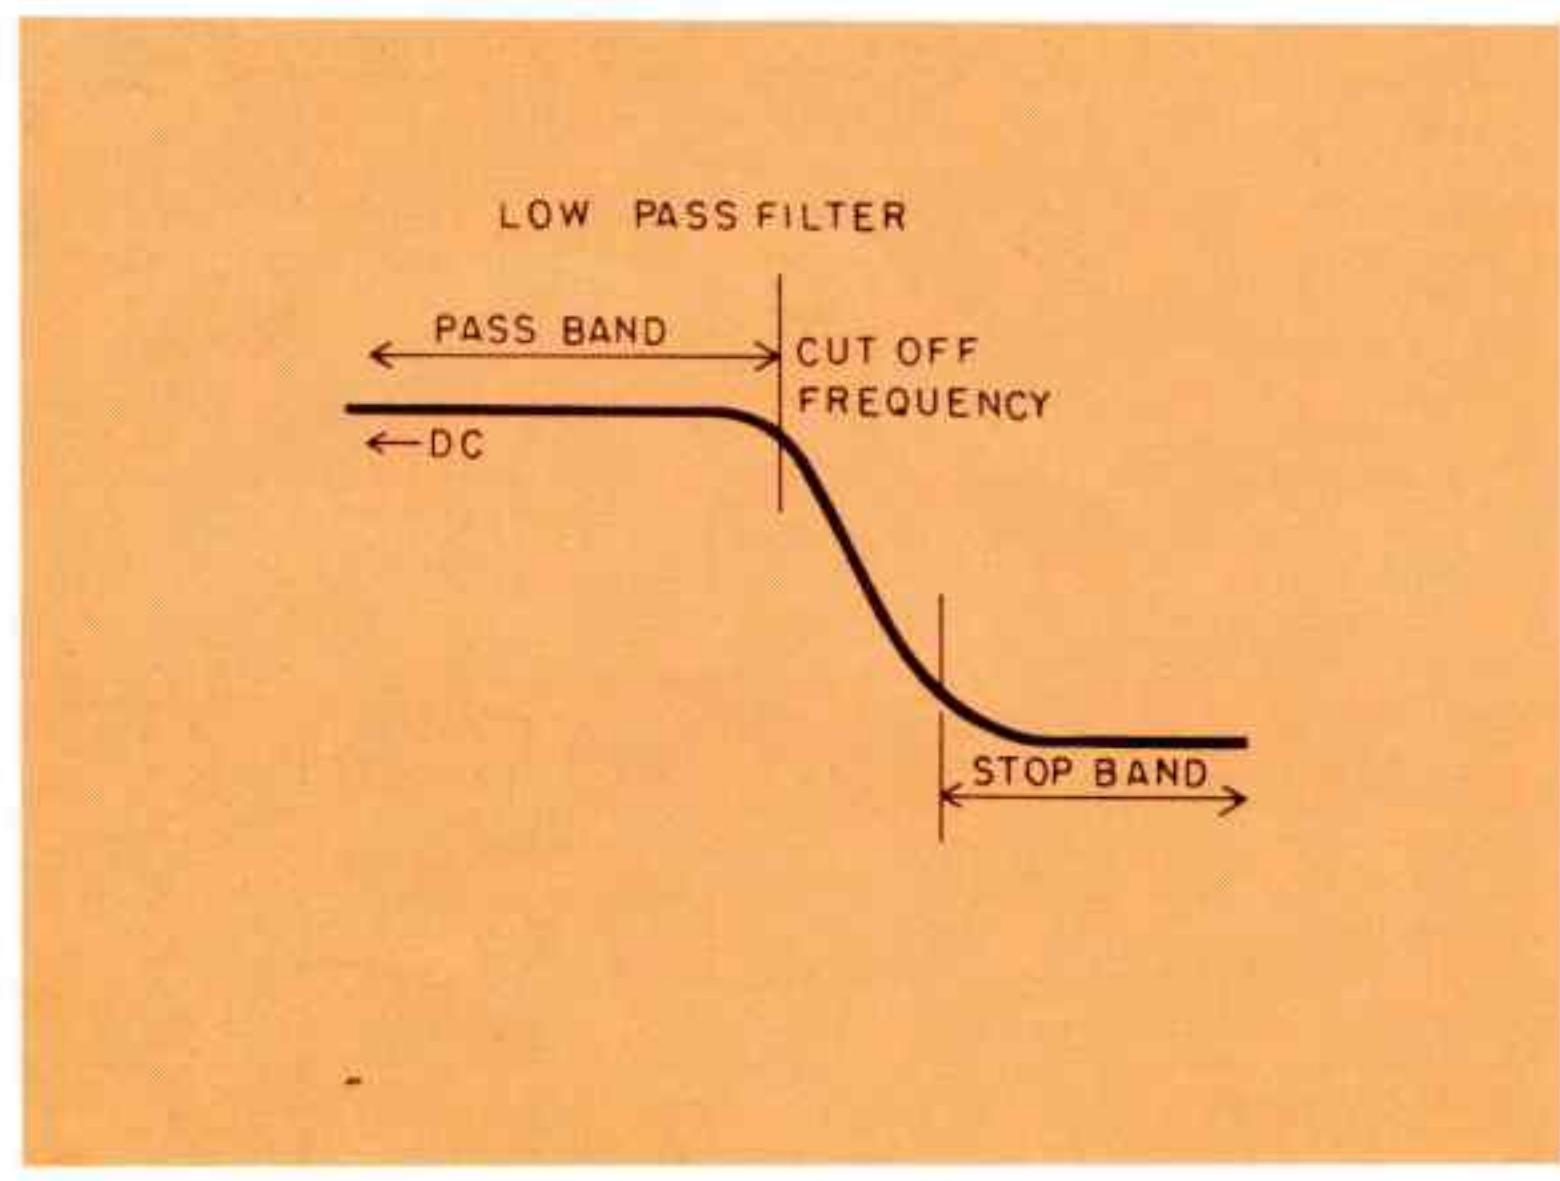

On stock, UTC uses the center frequency on band pass filters, 1/5 of the cutoff frequency on low pass filters, and 5 times the cutoff frequency on high pass filters.

Cutoff Frequency is that frequency marking the edge of the pass band. The attenuation at the cutoff frequency can be any number such as .1, 3, or 6 db depending upon the specification. The LPM's for example, are specified as 6 db maximum at cutoff frequency, while the FLH's are specified as 3 db ±1 db at cutoff.

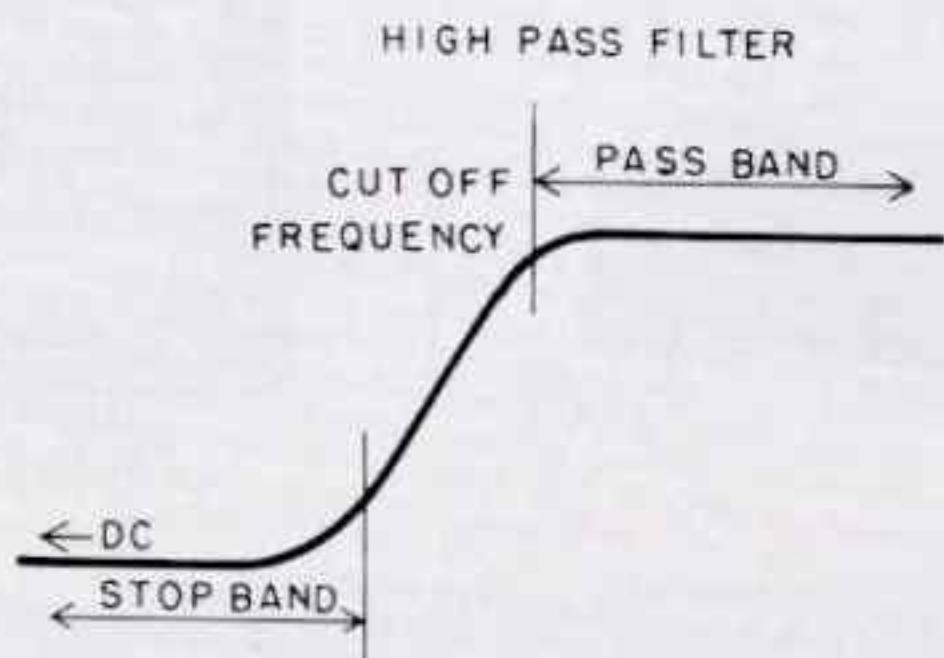

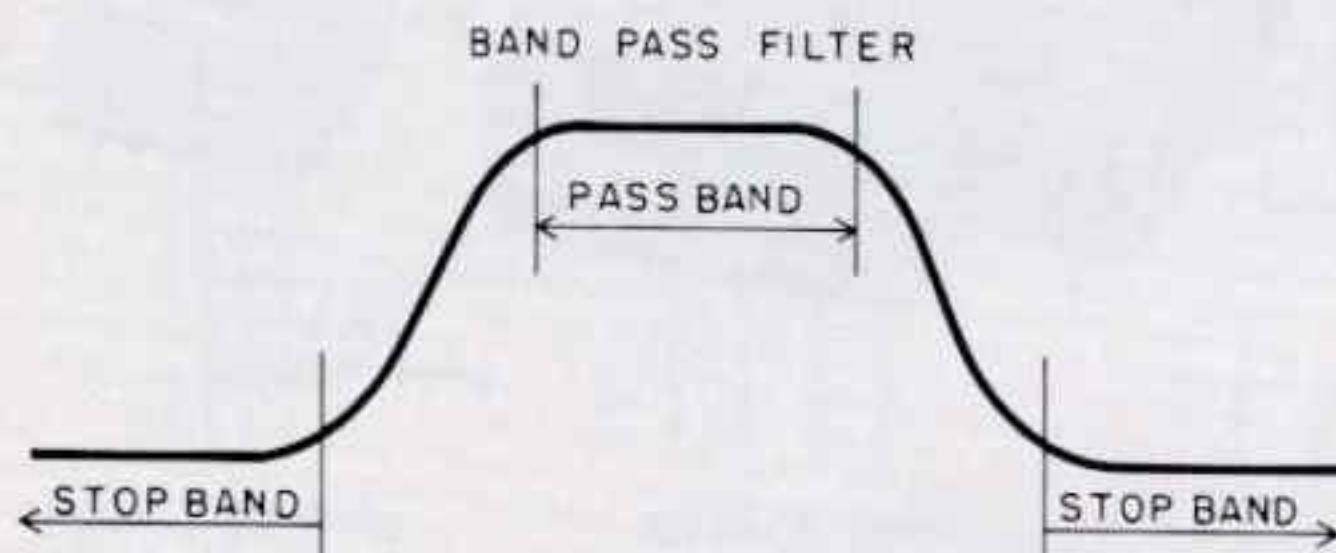

Pass Band Ripple is the difference from peak to valley of the amplitude response in the pass band measured in db.

Stop Band is that band of frequencies that the filter discriminates against.

GENERAL INFORMATION ON ELECTRIC WAVE FILTERS (continued)

Input Impedance Z_{in} is the impedance looking into the filter's input terminals with the filter properly loaded at the output terminals.

Output Impedance Z_{out} is the impedance looking into the filter's output terminals with the proper resistor across the input terminals.

Neither of these impedances, not to be confused with source and load impedances, should be specified with tolerances unless absolutely necessary. Restricting the actual impedance looking into one end or the other of a filter may complicate the design, increasing size and cost. Adjacent filters that are going to be used in parallel at their inputs or outputs, should be so specified in order to obtain units whose stop band impedances are high and thus have minimal effect on each other. For instance, adjacent TGT's (telegraph transmitting filters) may be paralleled on their outputs and adjacent TGR's (telegraph receiving filters) may be paralleled on their inputs.

In general, to reduce size and cost of special filters, the user should be careful not to overspecify. The maximum amount of attenuation and ripple that can be tolerated in the pass band as well as the minimum stop band attenuation should be specified. The flatter the pass band and the sharper the skirt attenuation, the more complex the network and the larger and more expensive the unit becomes.

For special designs the following information must be known: source and load impedances, insertion loss, pass band, stop band, operating level, operating temperature range, and size restrictions, plus any other special requirements such as phase matching, insertion loss matching, or attenuation matching, between units, envelope delay distortion, return loss limits, etc.

Since filters usually contain many precisely adjusted elements and are used in critical applications where continued reliable performance is a necessity, all UTC filters, both stock and specials, are manufactured and guaranteed to MIL-F-18327. See pages 79, 80.

Units with identical electrical and mechanical characteristics as stock items, except for center frequency on band pass filters, or cutoff frequency on low and high pass filters, are known as stock specials. For example, a band pass filter identical to the BPM series with a center frequency of 2700 Hz would be identified as BPM-2700, a 2700 Hz center frequency band pass filter identical to the MNF series would be identified as MNF-2.7, a low pass similar to LPM series with a 2700 Hz cutoff frequency would be identified as LPM-2700.

For Wide Band Pass applications (more than an octave wide) low pass and high pass filters may be connected in tandem. For instance, the FLH-5000 in tandem with the FHH-200 will result in an attenuation characteristic flat within 1 db from 300 to 4200 Hz, approximately 3 db at 200 and 5000 Hz, 40 db below 140 Hz, and 43 db above 6400 Hz.

For Band Reject applications, the BPM band pass minifilters may be used by connecting as shown on page 72, Figure A. The LBP-10, shown on page 77, may be also used for band reject application.

In measuring filters, precautions should be taken to be certain that the test equipment does not affect the measurement. For instance, when the lower stop band of a band pass filter or the stop band of a high pass filter is being measured, the apparent attenuation may be that of the harmonic output of the generator (which may lie in the filter pass band) rather than the actual filter attenuation at the test frequency. To eliminate this problem the use of a wave analyzer, if available, or another filter which passes the test frequency but rejects its harmonics is recommended.

Generally, on stock filters, variations of $\pm 20\%$ in the source and load impedances will have negligible effect on the attenuation response. FHH, FLH, FLL, FBH, BPM, BPH, BMI, and BTI filters may be used with a much lower source impedance and still give satisfactory results.

The nominal test level, E_g , is 2.0 Volts RMS for all stock filters except 0.5 Volt on the BPM and BML, 1.0 Volt on the LPM and HPM, 10 Volts on the LLP, and 115 Volts on the PLF and PLP filters.

Superior and consistent performance, stability, and reliability are achieved through meticulous control of all materials and processes during the entire manufacturing cycle from the first sample to each production filter.

Engineering, laboratory, and production facilities are available for full engineering discussion, sampling, and large quantity production-to meet special requirements.

FLATS™ — LOW PASS, BAND PASS, HIGH PASS

PACKAGING Flat metal case. Shielded to reduce hum pick-up.
Hermetically sealed. Straight pin terminals.

MIL SPECS To complete MIL-F-18327C Specs. Grade 6, Class R, Life X. See pages 79, 80.

NOTE Filters with other frequencies than shown can be supplied on special order.

LOW PASS

MIL TYPE FR6RX11YY1

Type No.	Source & Load Ω	Pass Band db (less than 1) (3 \pm 1)		Stop Band	Case
FLH-600	10K	DC to 450 Hz	600 Hz	40 db above 800 Hz	FP-A
FLL-3500	600	DC to 3 kHz	3.5 kHz	40 db above 4.5 kHz	FP-A
FLH-5000	10K	DC to 4.2 kHz	5 kHz	43 db above 6.4 kHz	FP-B
FLL-18000	600	DC to 15 kHz	18 kHz	43 db above 23 kHz	FP-A
FLL-50000	600	DC to 42 kHz	50 kHz	43 db above 64 kHz	FP-B

BROAD BAND PASS

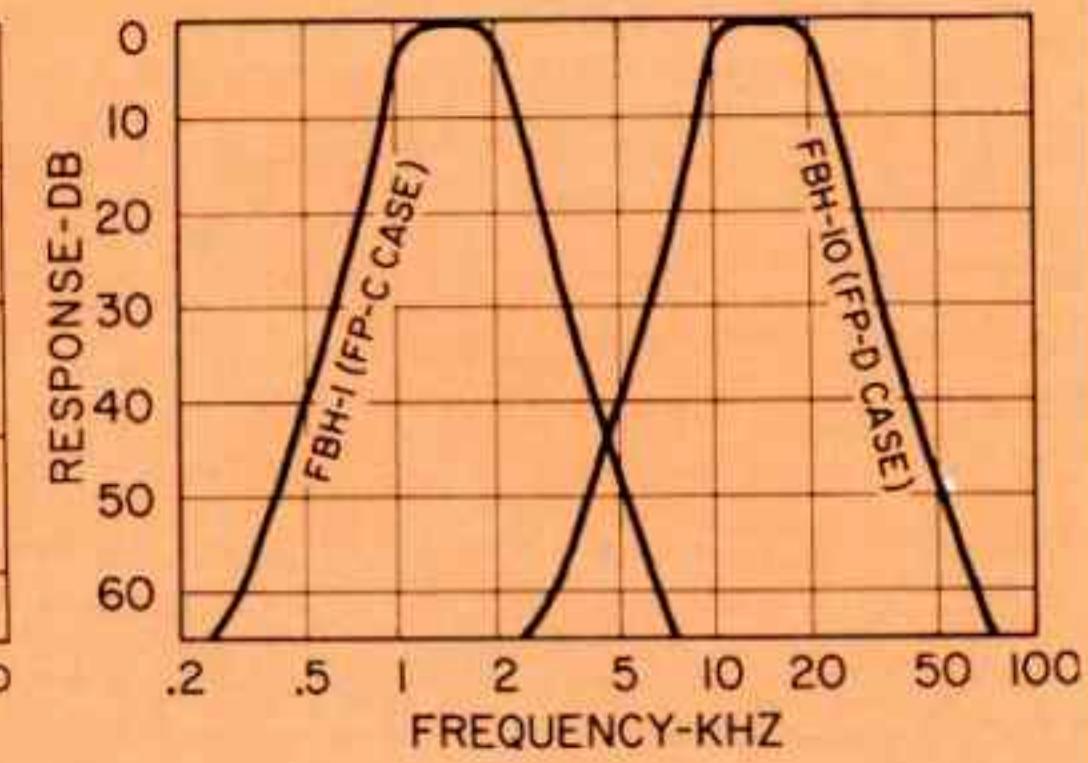

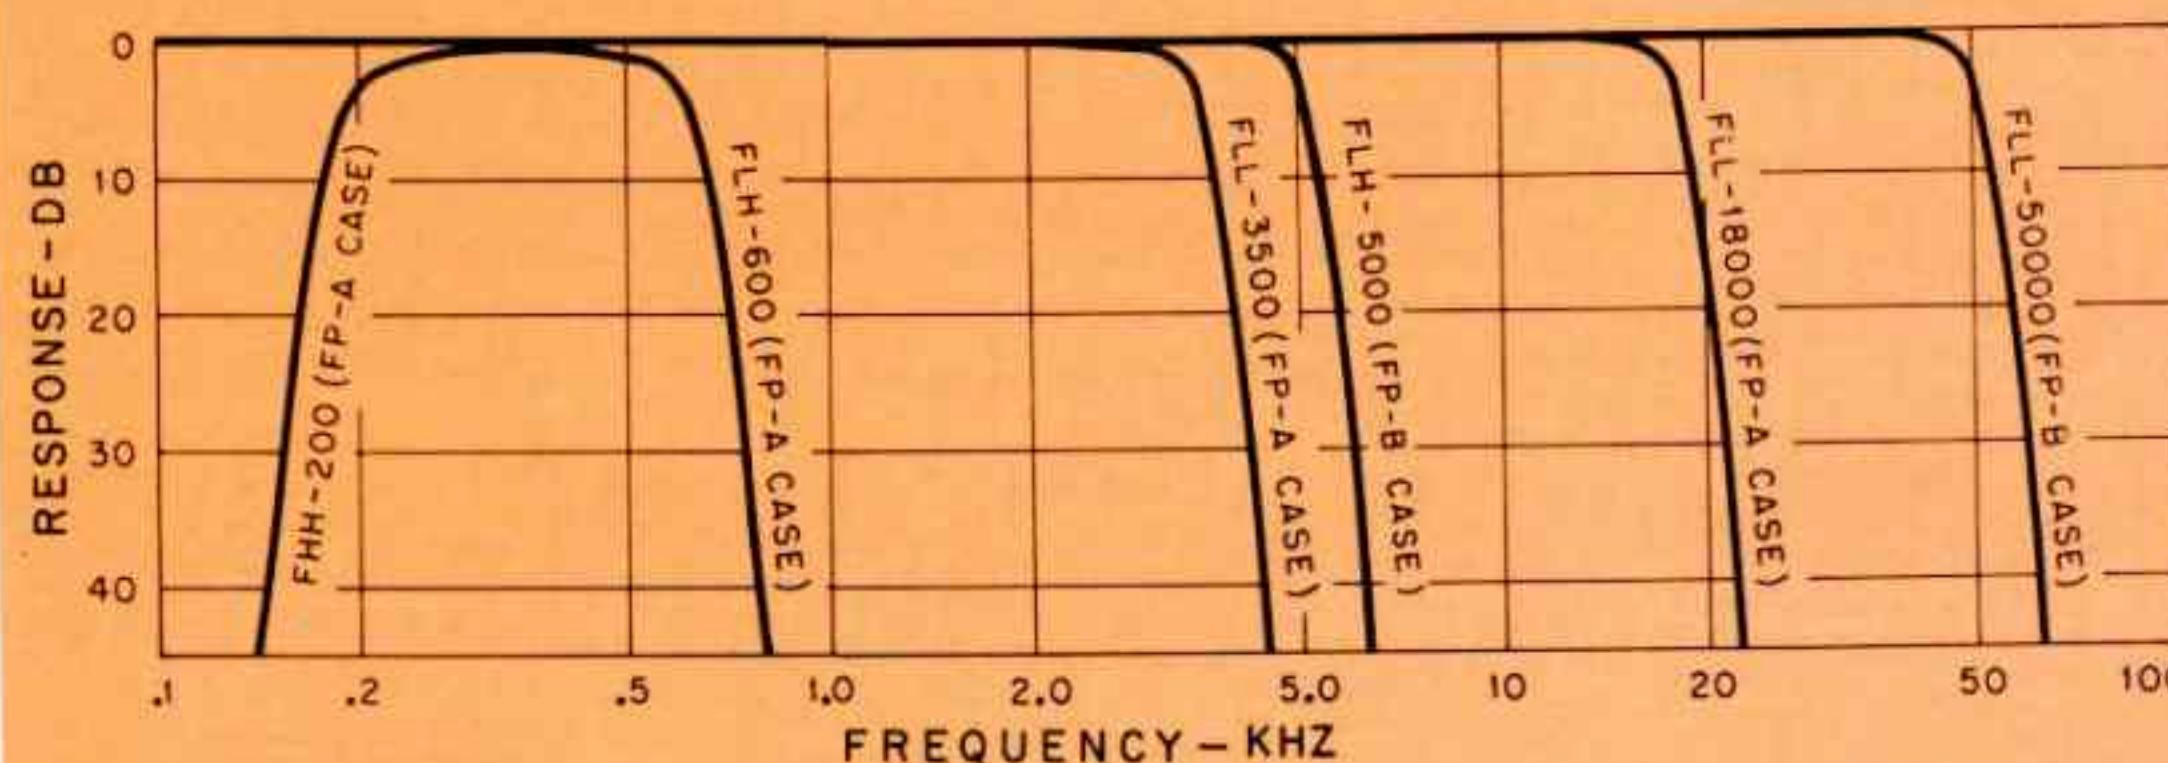

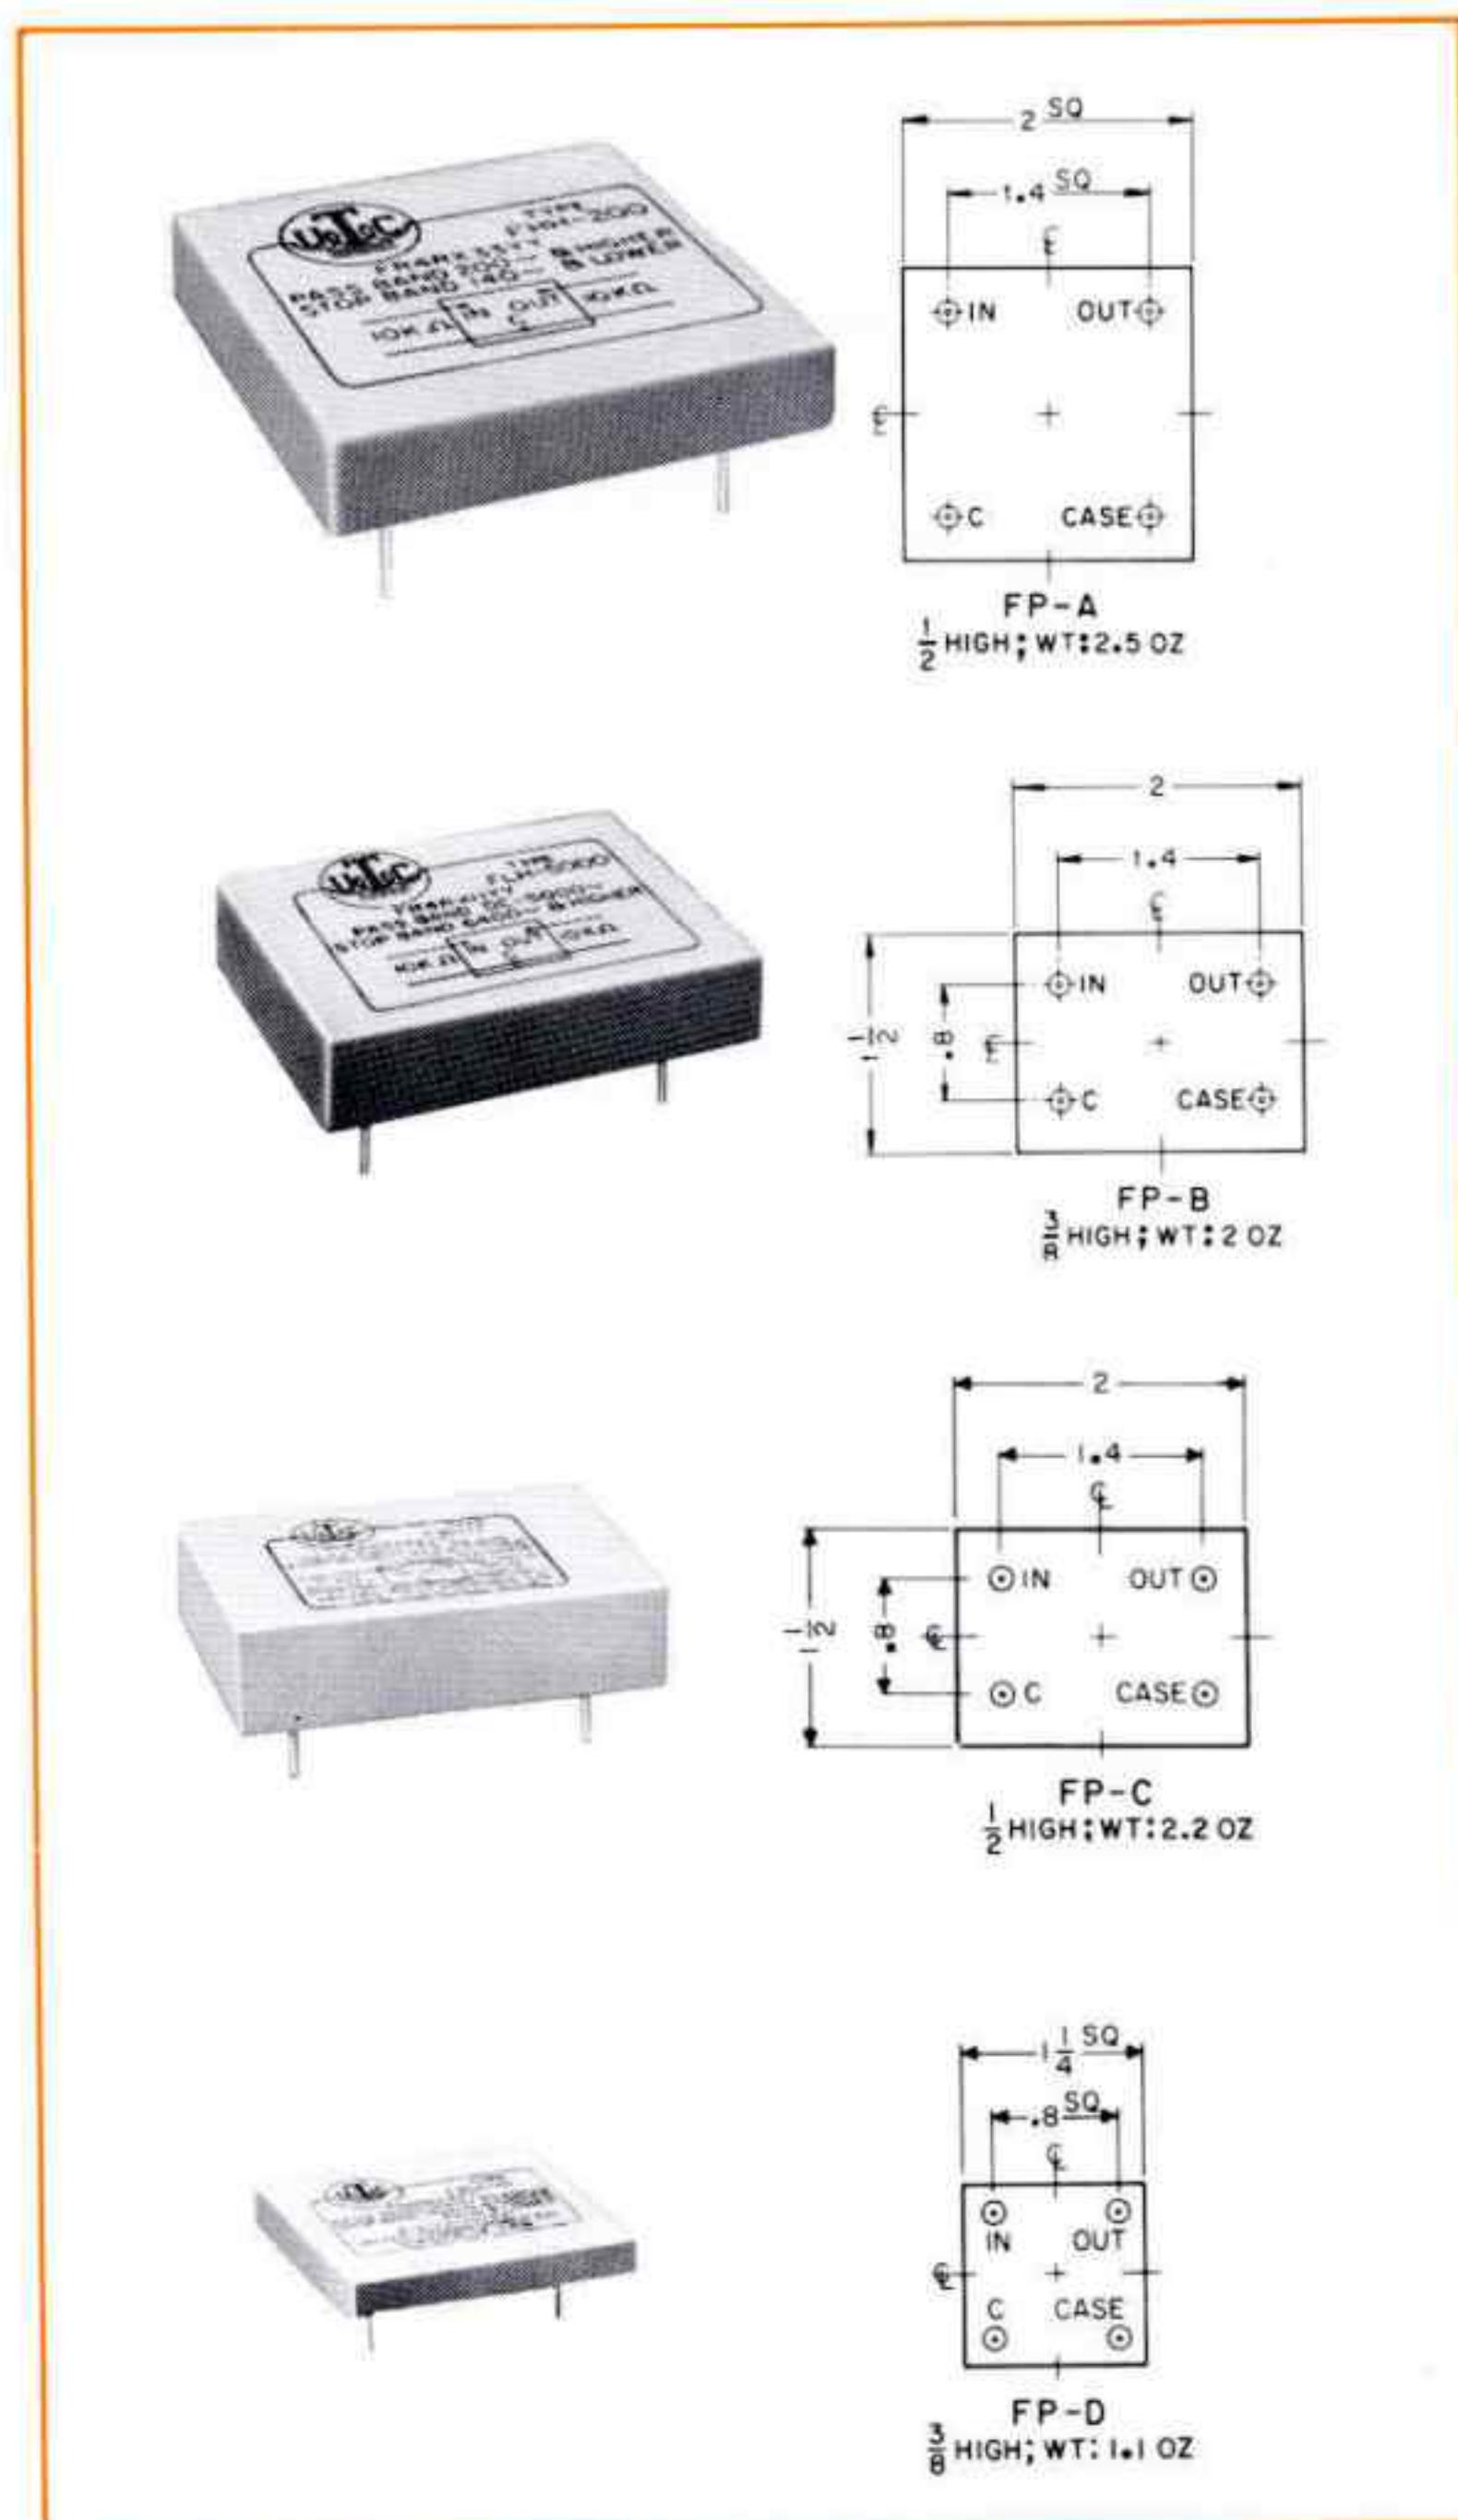

MIL TYPE FR6RX22YY1

Type No.	Source & Load Ω	Pass Band (less than 3 db)		Stop Bands (more than 36 db) Below Above	Case
FBH-1	10K	1 kHz to 2 kHz	.5 kHz	4 kHz	FP-C
FBH-10	10K	10 kHz to 20 kHz	5 kHz	40 kHz	FP-D

MIL TYPE FR6RX33YY1

Type No.	Source & Load Ω	Pass Band db (less than 1) (3 \pm 1)		Stop Band	Case
FHH-200	10K	300 Hz & above	200 Hz	40 db below 140 Hz	FP-A

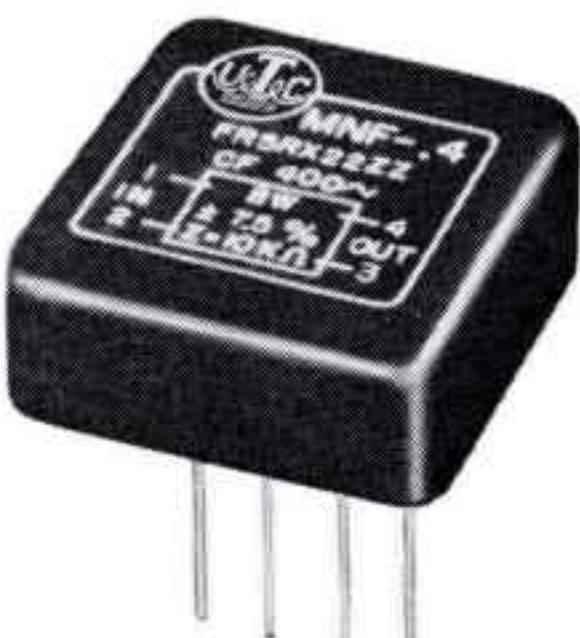

TELEMETERING BAND PASS FILTERS

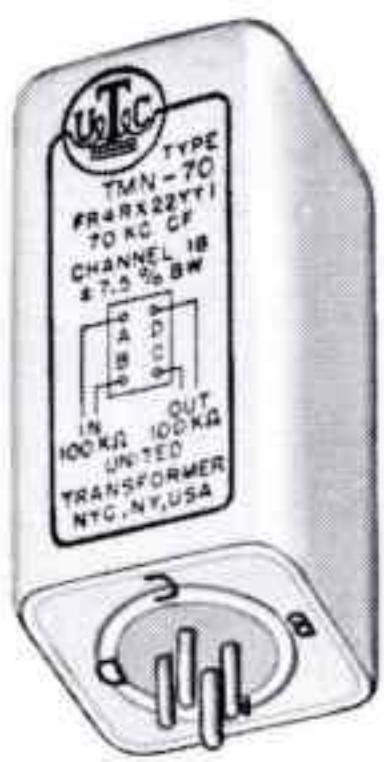

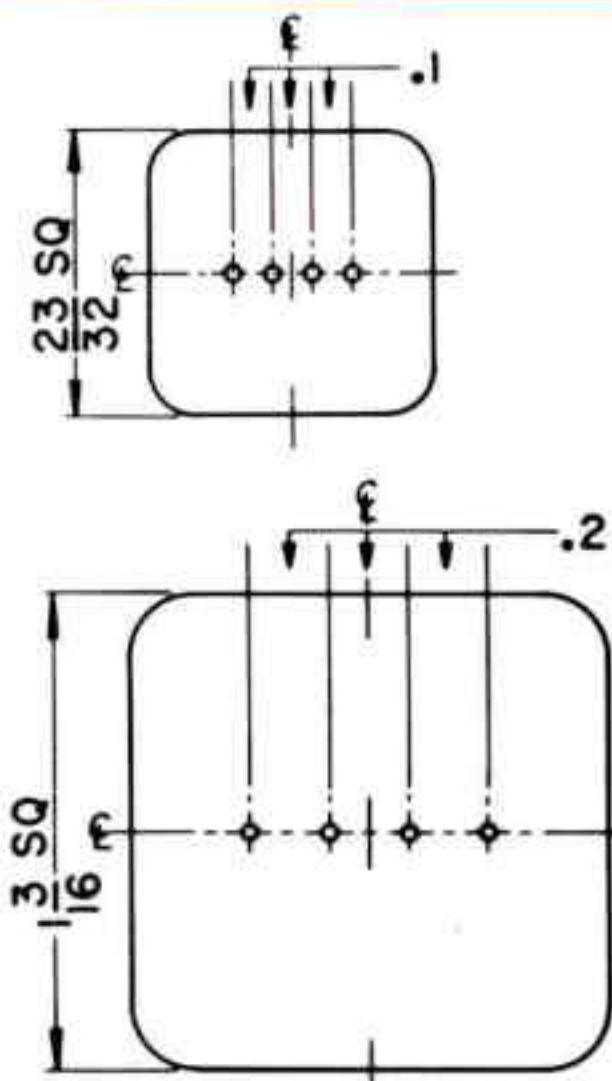

TELE-MINIFILTER™

**MNF-7.35 thru
MWF-70**
 $\frac{23}{32}$ sq. x $\frac{1}{2}$ " high
 Weight $\frac{1}{3}$ oz.
 Leads: .025 Dia. x 1"; Type N-2,
 Gold Plated Nickel, MIL-STD-1276.

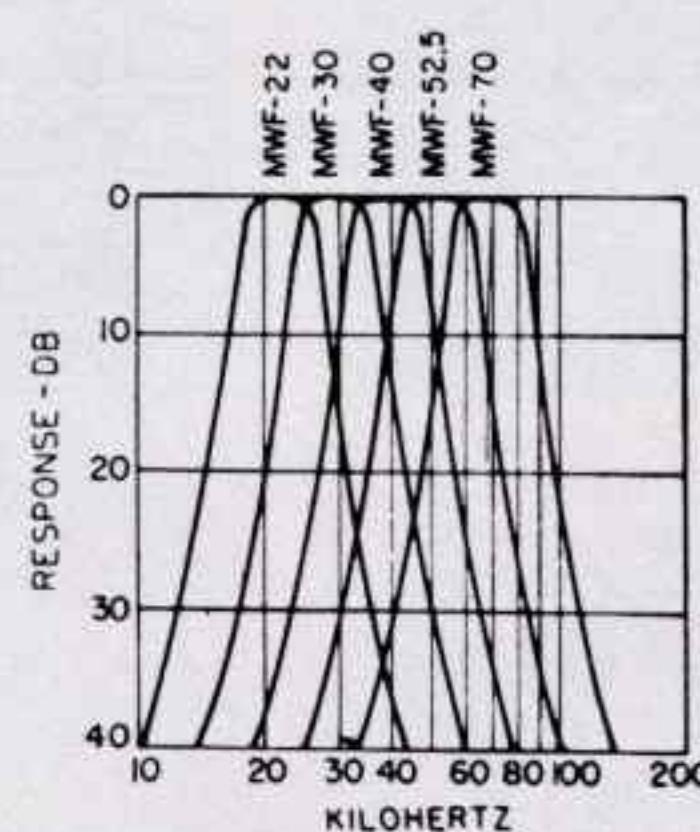

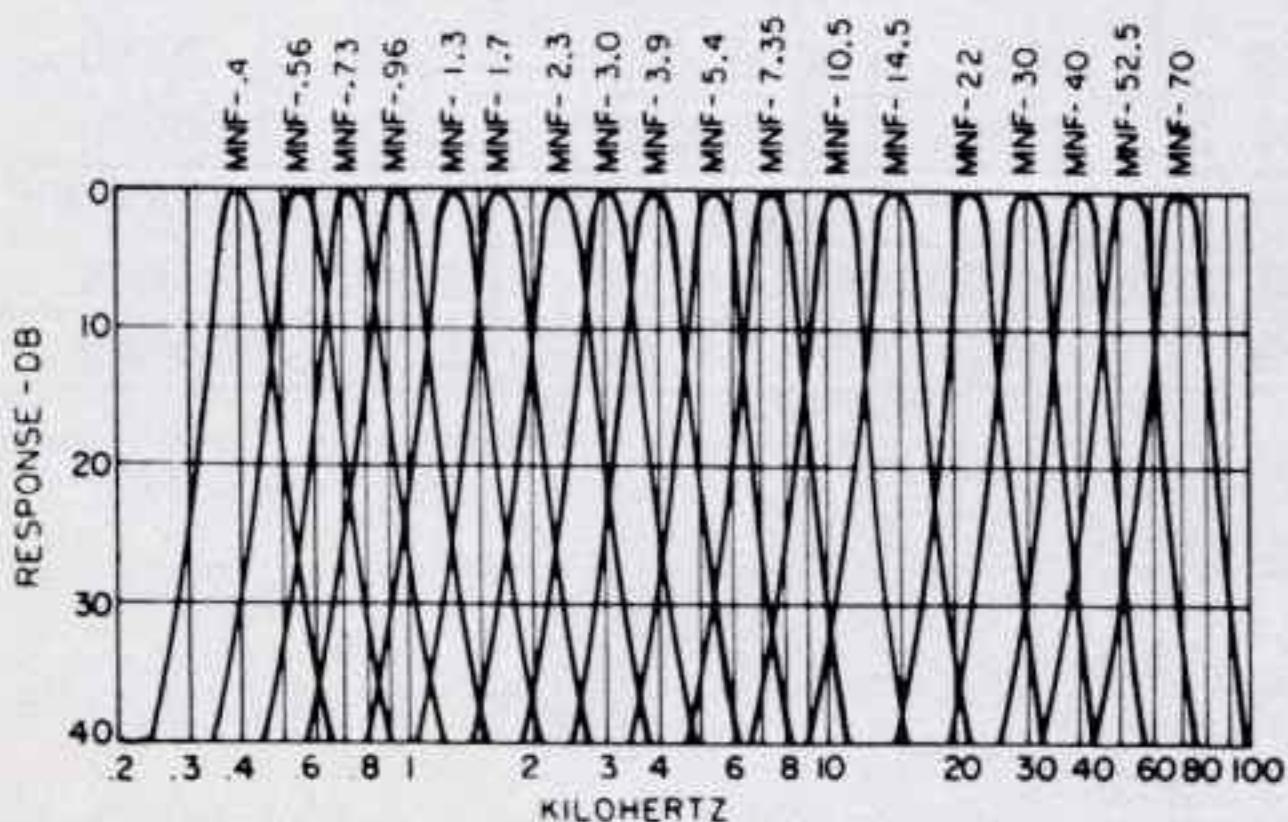

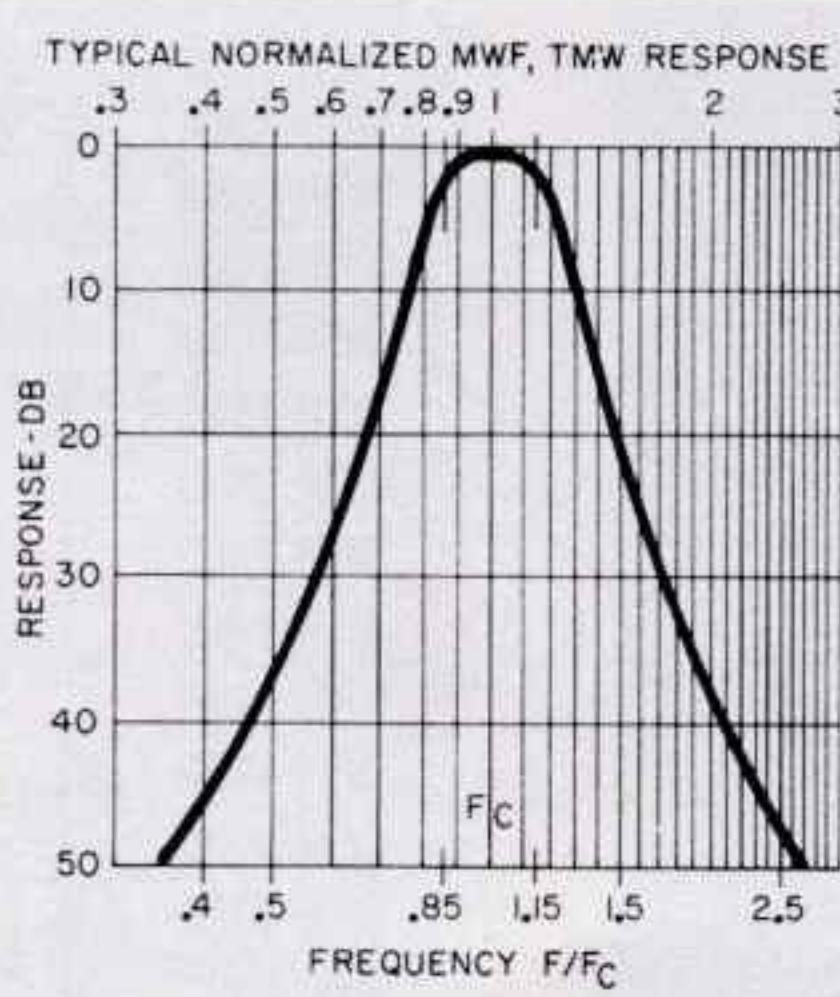

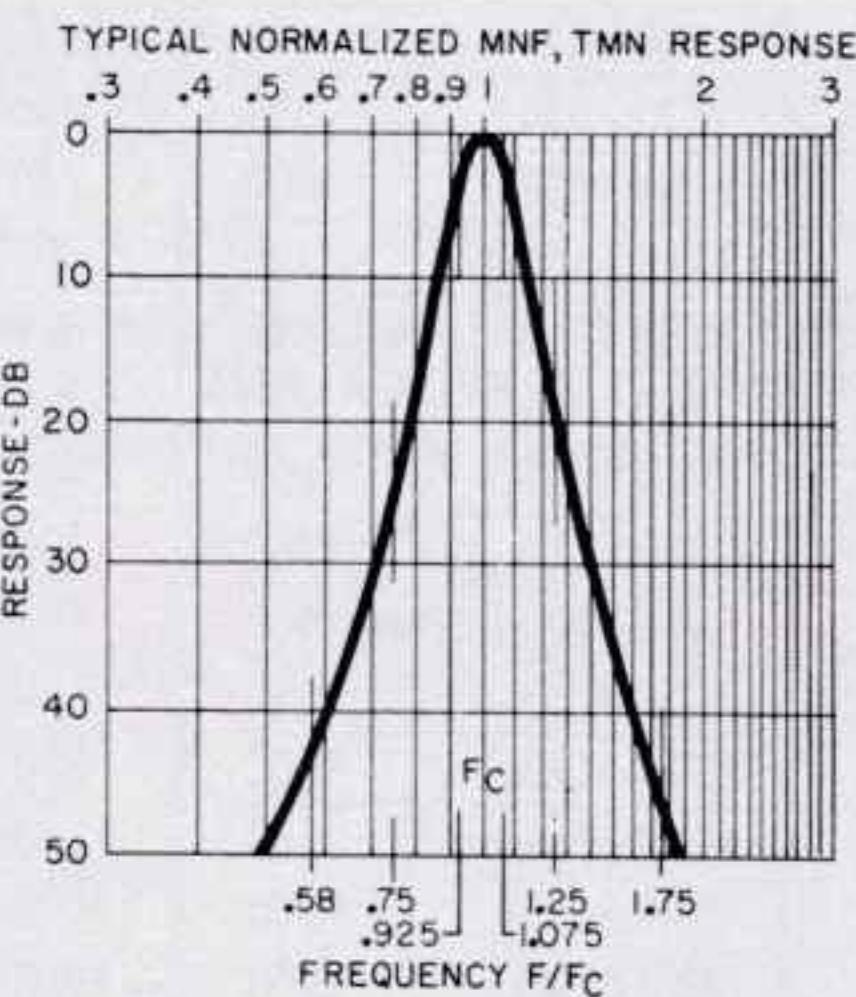

**MNF-.4 thru
MNF-5.4**
 $1\frac{1}{16}$ sq. x $\frac{1}{2}$ " high
 Weight 1 oz.

**TMN-2.3 thru
TMW-70**
 $\frac{23}{32}$ x $\frac{23}{32}$ x $1\frac{1}{8}$ "
 Weight 1.2 oz.

**TMN-.4 thru
TMN-1.7**
 $1\frac{1}{16}$ x $1\frac{1}{32}$ x 2"
 Weight 3.5 oz.

NOTE: TMN curves are equivalent to MNF's of similar frequency.
 Likewise, TMW curves are equivalent to MWF's.

PACKAGING All hermetically sealed. MNF and MWF units metal cased, epoxy terminal board with pin terminals. TMN and TMW units metal cased with plug-in 4 pin header for Winchester M4S-LS socket.

NOTES The low potential connections (2 and 3 on MNF and MWF, B and C on TMN and TMW) are brought out to individual terminals so that input and output may be used at different DC potentials if desired.

MIL SPECS All to complete MIL-F-18327C Specs. MNF and MWF: FR7RX22ZZ1. TMN and TMW FR4RX22YY1. See pages 79, 80.

IMPEDANCES MNF and MWF 10K ohms source and load. TMN and TMW 100K ohms source and load.

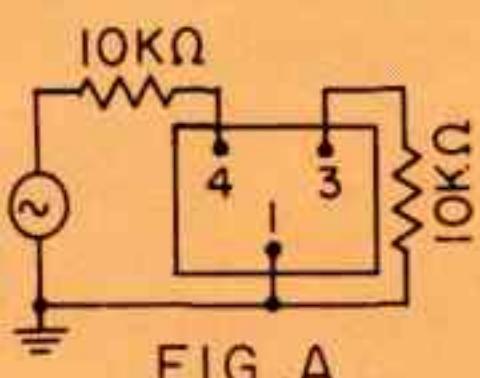

SPECIALS MNF and MWF filters can be obtained with special center frequencies from 400 Hz to 200 kHz.

Type No.	Center Frequency (kHz)	Type No.	Center Frequency (kHz)
MNF-.4	.4	MNF-14.5	14.5

MNF-10.5	10.5		

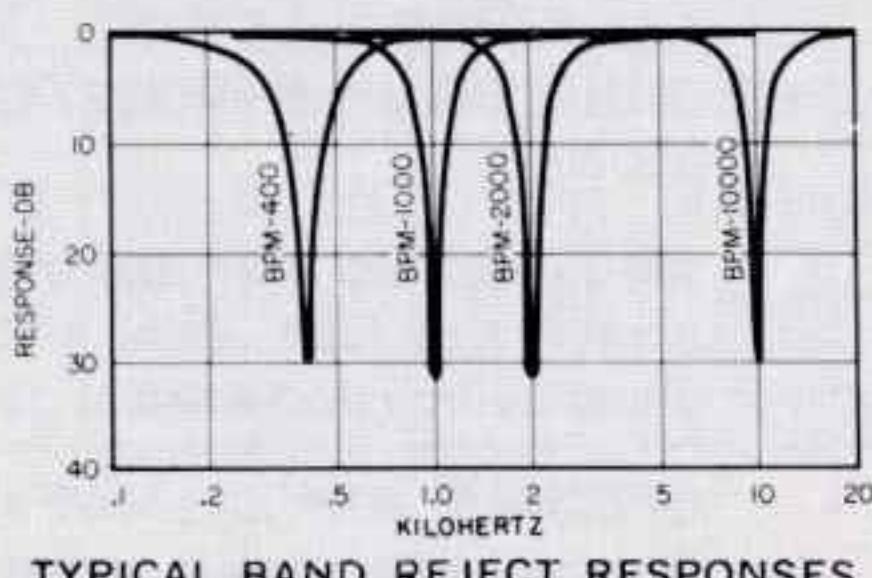

ATTENUATION CHART

Type No.	Pass Band Width (less than 3 db)	Stop Band
MNF	$\pm 7\frac{1}{2}\%$	15 db min @ $\pm 25\%$ 40 db min @ 1.75 Fc .58 Fc
MWF	$\pm 15\%$	15 db min @ $\pm 50\%$ 40 db min @ 2.5 Fc .4 Fc
TMN	$\pm 7\frac{1}{2}\%$	Same as MNF
TMW	$\pm 15\%$	Same as MWF

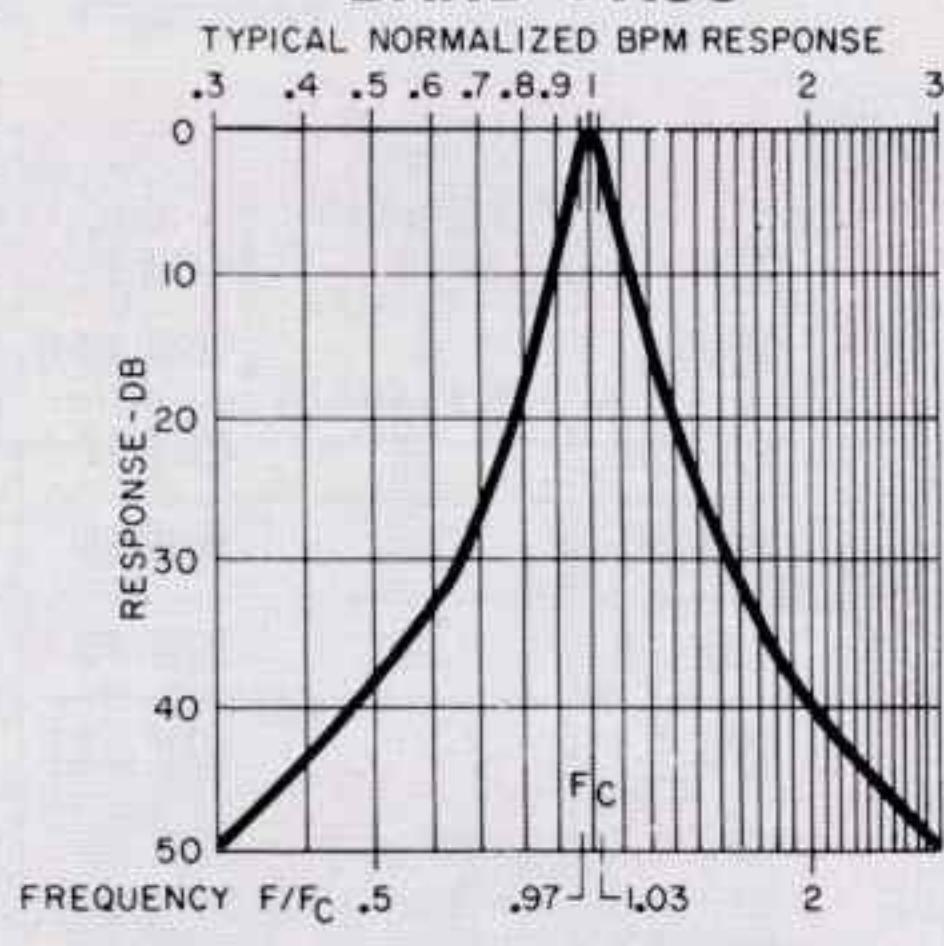

MINIATURE FILTERS—BAND PASS, HIGH PASS, LOW PASS

FIG. A
CONNECTIONS FOR
BAND REJECT APPLICATIONS**BAND REJECT**

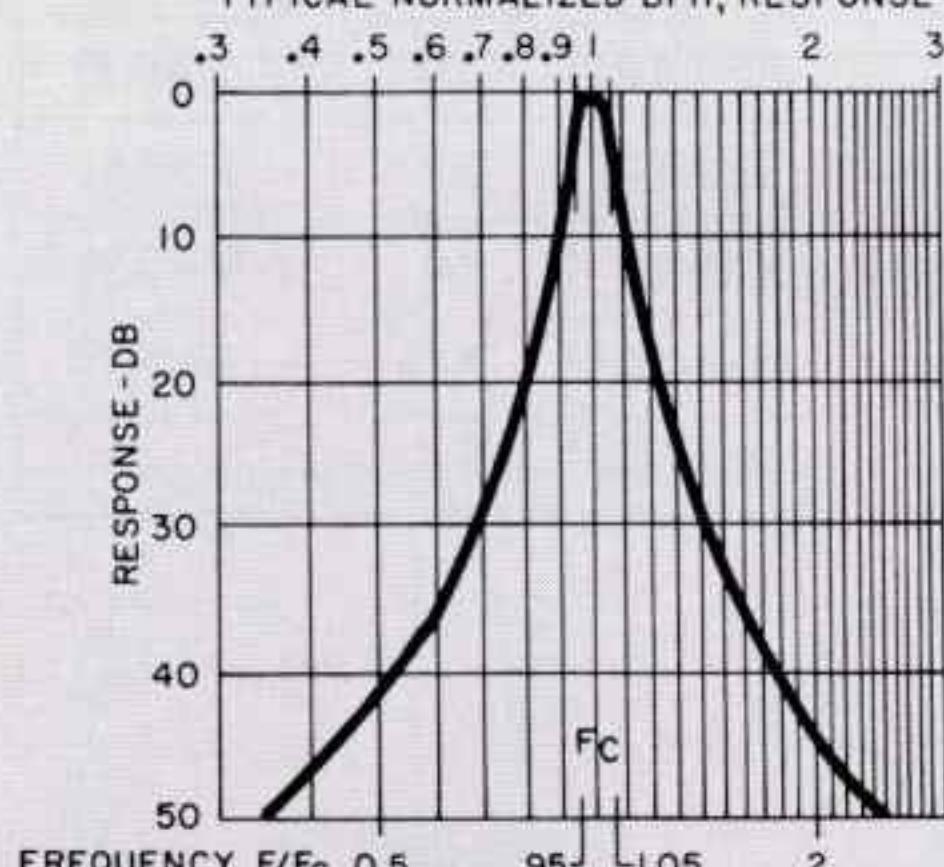

BPM units are designed for both band pass and band reject applications. For band reject connect as in Fig. A above.

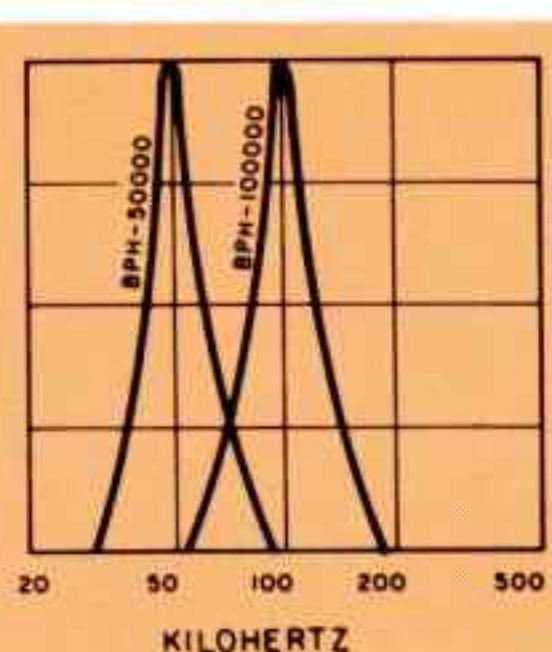

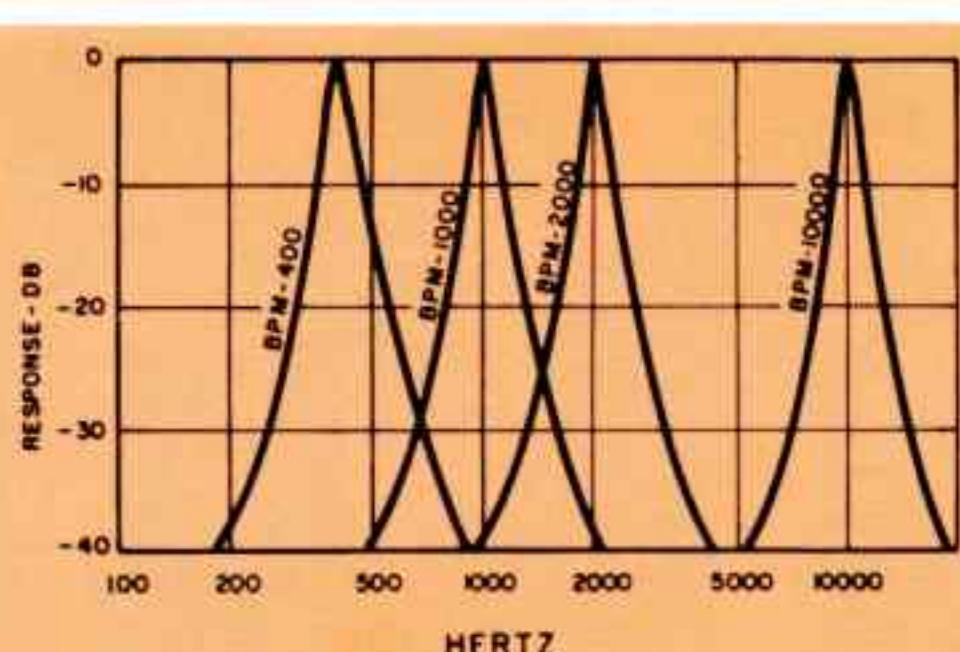

TYPICAL BAND REJECT RESPONSES

BAND PASS

TYPICAL NORMALIZED BPM RESPONSE

TYPICAL NORMALIZED BPH, RESPONSE

PACKAGING Hermetically sealed. Standard MIL metal cases. Straight pin terminals. Shielded to reduce hum pick-up.

MIL SPECS To complete MIL-F-18327C Specs. Grade 6, Class R, Life X. See pages 79, 80.

WIDE BAND PASS APPLICATIONS The HPM and LPM may be connected in tandem. For example, the HPM-500 in tandem with the LPM-5000 will be flat within 1 db from 625 Hz to 4000 Hz with an attenuation of 40 db at 300 Hz and 8250 Hz.

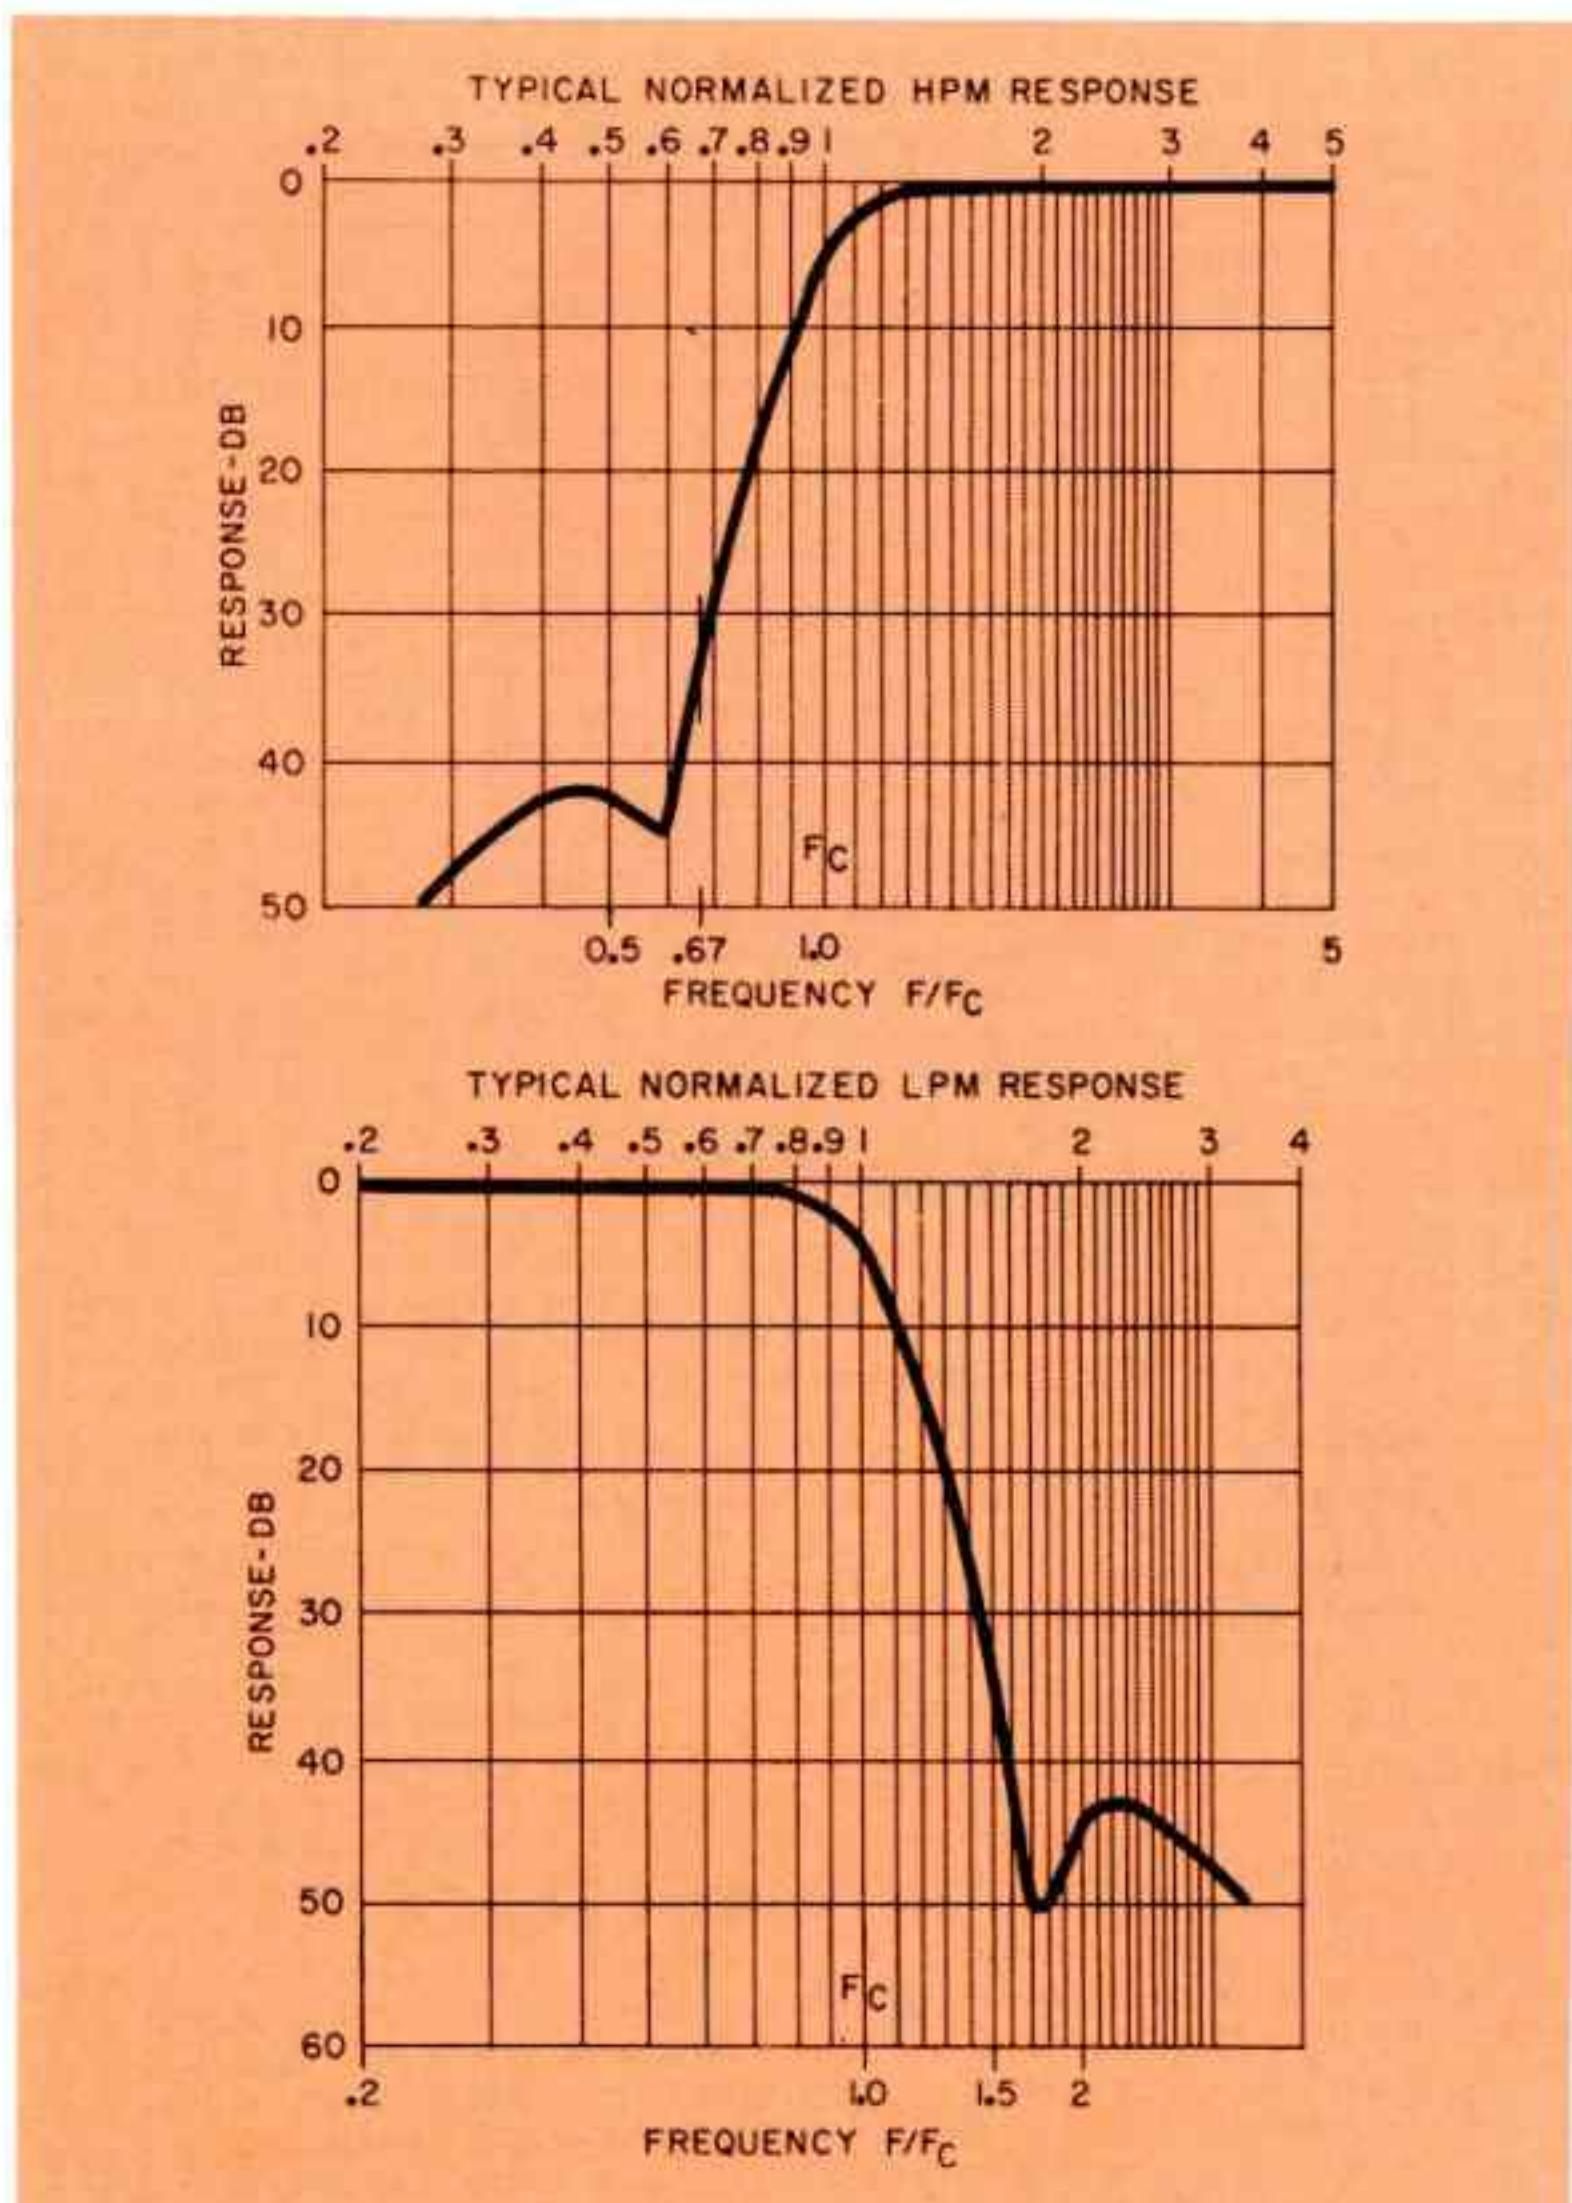

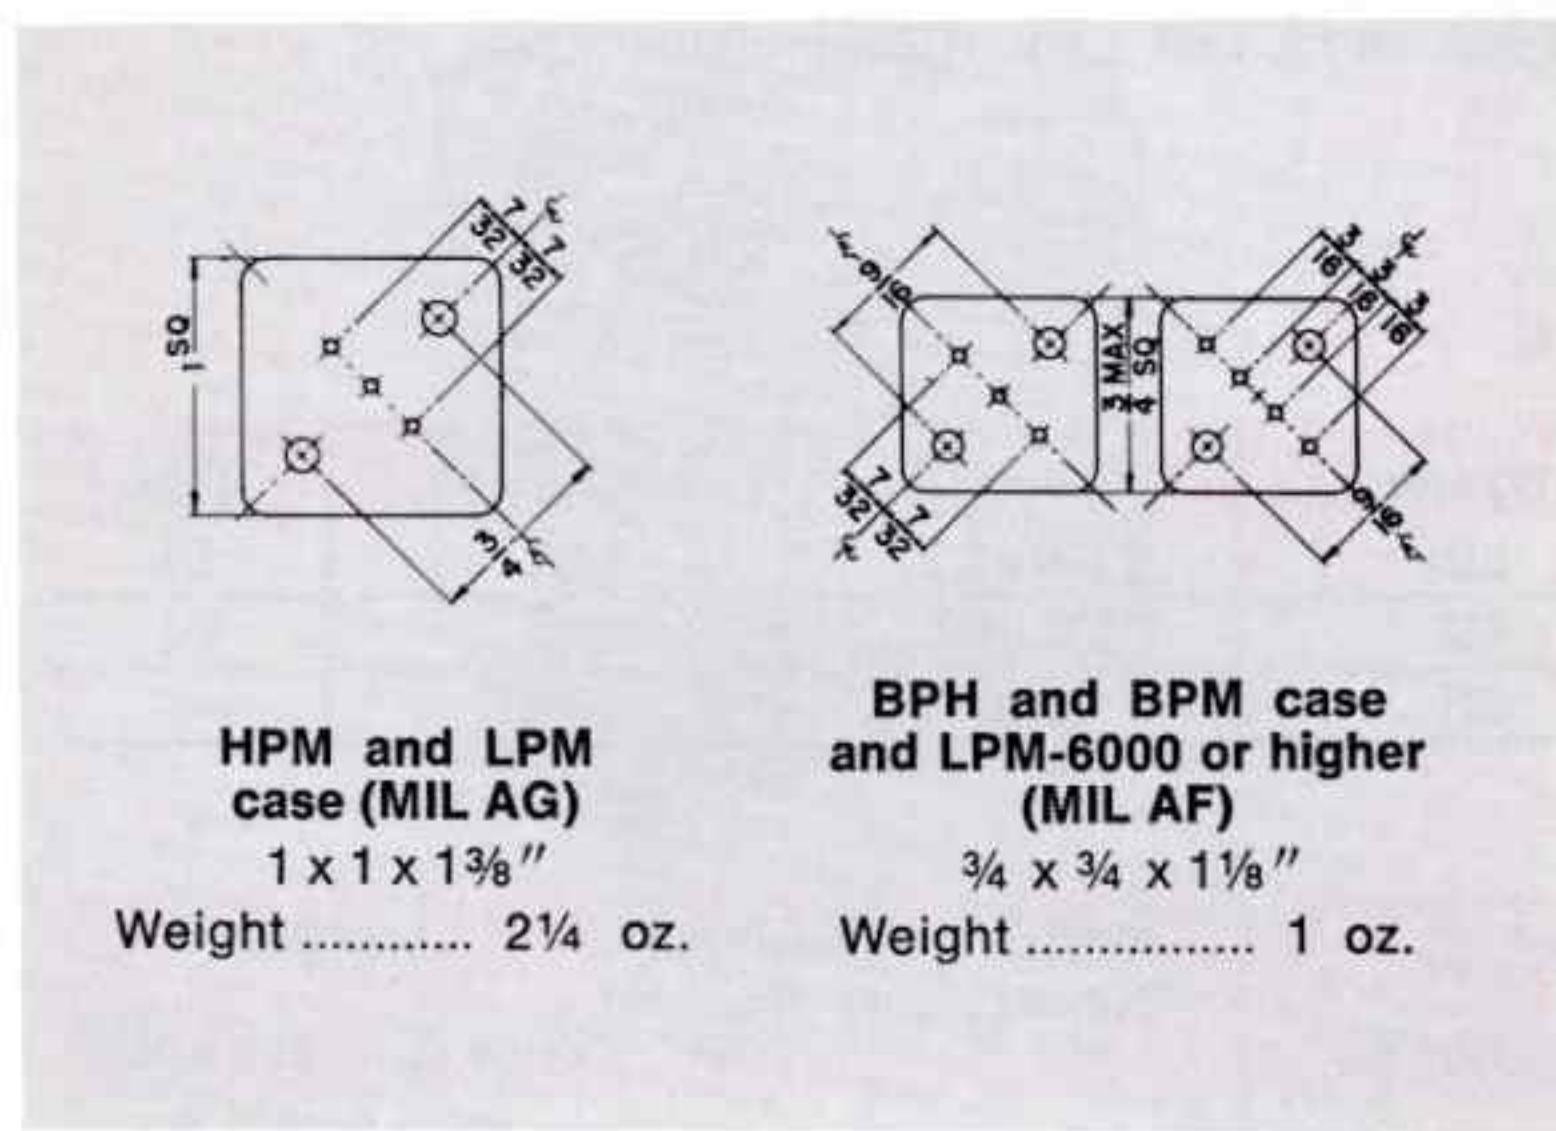

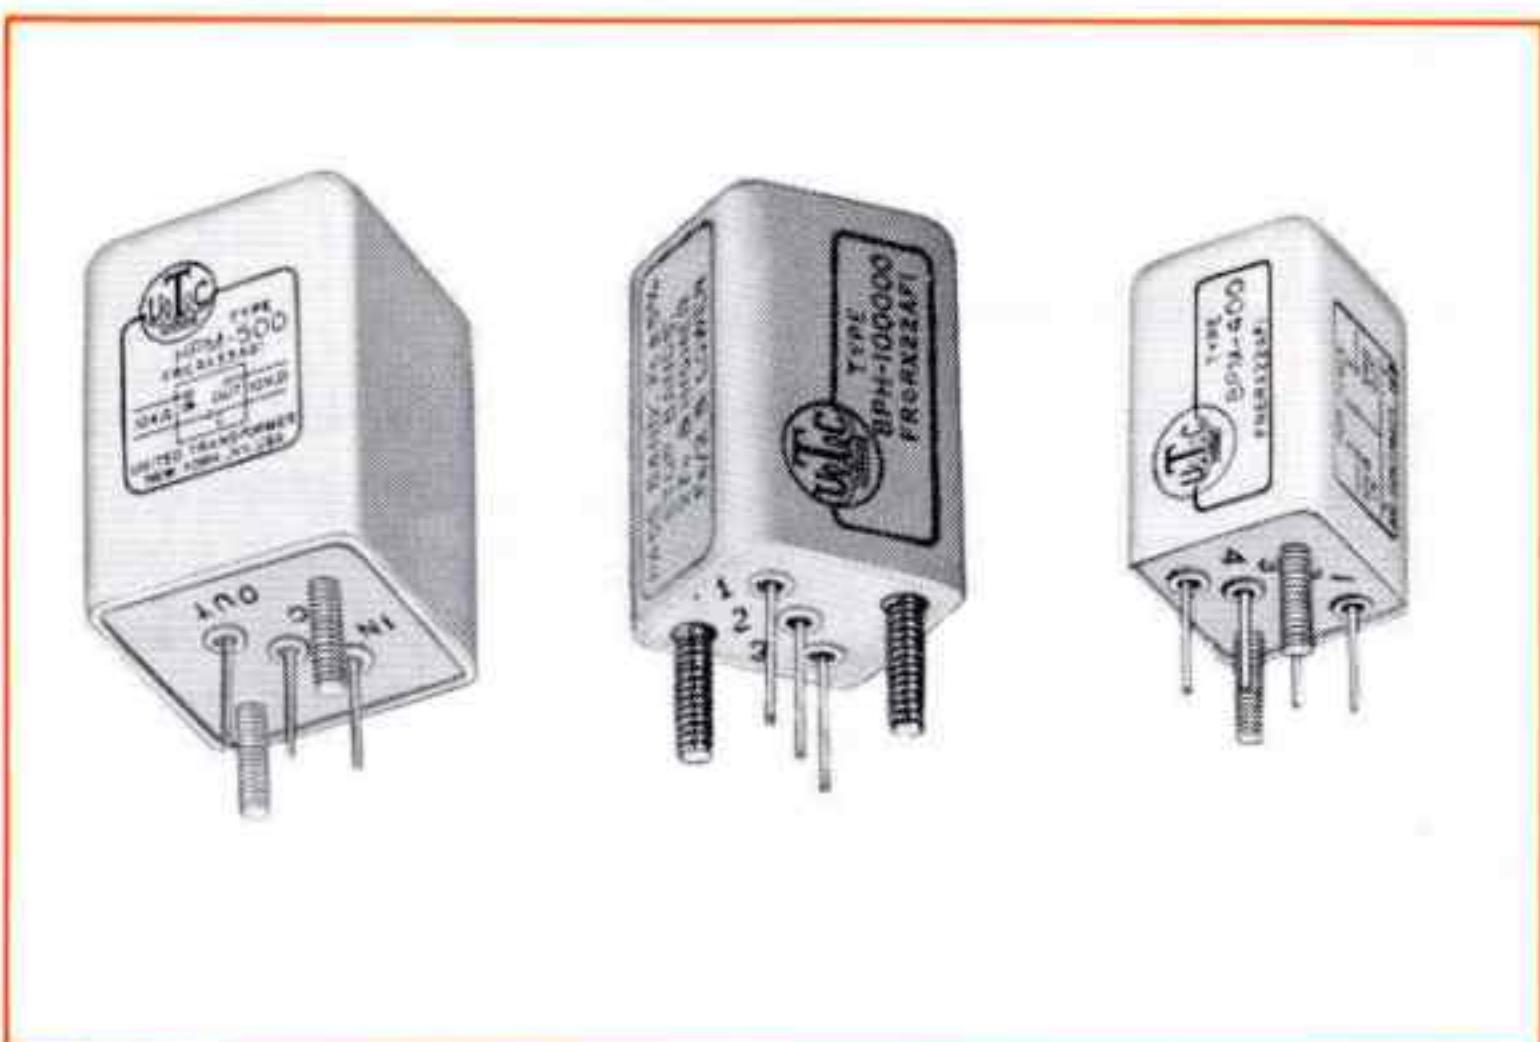

BAND PASS**MIL TYPE FR6RX22AF1**

BPM's source 10K ohms; load 10K ohms or grid.
Grid output gives 2:1 gain.

NOTE: Special BPM filters with center frequency of 30 kHz to 200 kHz are available with 10,000 ohms load only, these have three terminals.

BPH's 500 ohms source and load.

FILTER CASE M

Base	$1\frac{3}{16} \times 1\frac{11}{16}$ "
Mounting	$\frac{3}{4} \times 1\frac{1}{4}$ "
Mounting Studs (stainless)	6-32
Cutout	$\frac{7}{8}$ " dia.
Height	$1\frac{5}{8}$ "
Weight	6 oz.
BMI-30 / BMI-50	2 $\frac{1}{2}$ " h., wt. 9 oz.

PACKAGING Hermetically sealed. Metal case. Special shielded to reduce hum pickup.

MIL SPECS To complete MIL-F-18327C Specs. MIL Type FR6RX22YY1. See pages 79, 80.

SPECIALS BMI and BTI units available from 20 Hz to 50 kHz, above 400 Hz smaller size and weight can be obtained by selecting BPM units (see page 72). BML units available from 60 Hz to 50 kHz.

NOTES BMI, BML and BTI filters have a phase slope over the pass band that is essentially linear. For wide band pass filters, the HMI and LMI or HML and LML filters may be connected in tandem. For example, the HMI-200 in tandem with the LMI-4000 will result in a filter flat within 1 db from 250 Hz to 3200 Hz and with an attenuation of 35 db at 133 Hz and 6 kHz. See pages 75 and 76 for LMI, LML, HML and HMI units.

 Mounting Studs 6-32
 Cutout $\frac{3}{8} \times 1$ "
 Height $3\frac{1}{8}$ "
 Weight 1 $\frac{1}{2}$ lbs.

TYPE No. LBP-10 / MIL TYPE FR6RX22FB1

At All Applications Listed Below:

SOURCE — 10KΩ; CENTER FREQUENCY — 10 Hz

Appli-cation	Load Ω	Terminals			Pass Band (< 3 db) (Hz)	Stop Band Min. db @ (Hz)
		Input	Com.	Output		
Band Pass	10K	1	2	3	9.6-10.4	30 5 & 20
Band Pass	3.3 Meg	1	2	4	9.6-10.4	35 5 & 20
Band Reject	50K	4	1	3	DC-7 14-36K	30 10

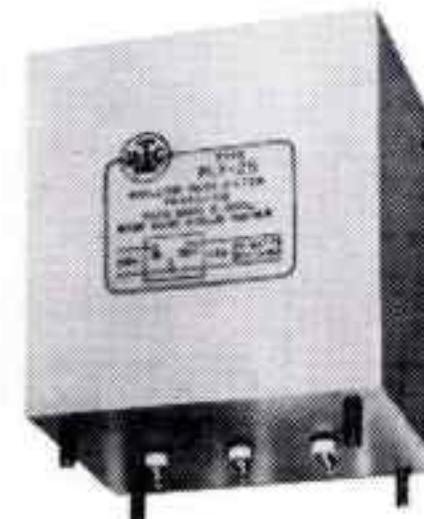

MIL TYPE FR6RX11FA1

Type No.	Source and Load	Pass Band (less than 3 db) DC to: (Hz)	Stop Band (more than 40 db) (Hz)
LLP-10	100KΩ	10	20
LLP-15	100KΩ	15	30

400 Hz 115 V LINE FILTERS

PLF-25 — 25 WATT 115 V 400 Hz

Intended for use on 115 volt 400 Hz line to eliminate harmonic distortion. The PLF-25 operating from the 115 volt line into a 500 ohm load will give 115 volt output at 400 Hz, will be within ± 1 db from 375 to 425 Hz and will attenuate 800 Hz by 30 db, 1200 Hz and higher by at least 50 db. Hermetically sealed, metal encased, to complete MIL-F-18327C specs. **MIL Type FR4RX11NB1**. See pages 79, 80.

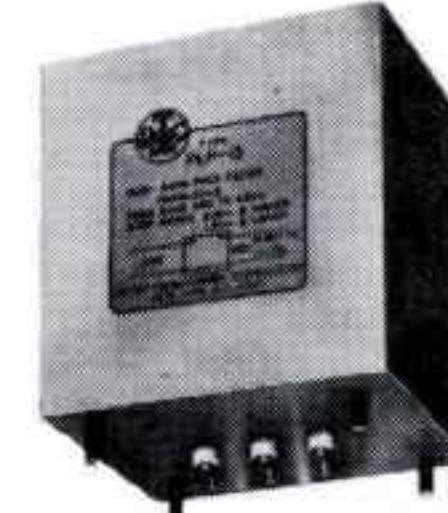

PLF-25

Base $4\frac{5}{16} \times 5\frac{1}{16}$ "
 Mtg. $3\frac{5}{16} \times 4\frac{1}{16}$ "
 Mt. Studs .. $1\frac{1}{4}-20 \times \frac{5}{8}$ "
 Cutout $1\frac{1}{16} \times 3\frac{1}{16}$ "
 Height $5\frac{1}{2}$ "
 Weight 10 lbs.

PLP-13 — 13 WATT 115 V 400 Hz

Intended for use on 115 volt 400 Hz line to eliminate harmonic distortion, reject 60 and 120 Hz, and give zero phase shift at 400 Hz. The PLP-13 operating from the 115 volt line into a 1000 ohm load will give 115 volt output at 400 Hz, will be within ± 1 db from 375 to 425 Hz, will attenuate 800 Hz by 15 db, 1200 Hz by 45 db, frequencies above 1200 Hz by at least 35 db, 120 Hz by 20 db, and 60 Hz by 30 db. Hermetically sealed, metal encased, to complete MIL-F-18327C specs. **MIL Type FR4RX22LB1**. See pages 79, 80.

PLP-13

Base $3\frac{11}{16} \times 4\frac{5}{16}$ "
 Mtg. $2\frac{1}{16} \times 3\frac{5}{16}$ "
 Mtg. Studs 10-32 x $\frac{1}{2}$ "
 Cutout $1\frac{1}{16} \times 2\frac{1}{16}$ "
 Height $4\frac{1}{2}$ "
 Weight 6 $\frac{1}{2}$ lbs.

TELEGRAPH TONE CHANNEL FILTERS

PACKAGING Hermetically sealed. Metal cased. Pin terminals to fit subminiature 7-pin socket.

MIL SPECS To complete MIL-F-18327C Specs. MIL Type FR6QX22YY1. See pages 79, 80.

IMPEDANCE: 600 ohms source and load.

Types	Pass Band Width (less than 3 db) (Hz)	Stop Band Width Min db @ (Hz) from Fc

TYPICAL RESPONSE CURVES

MILITARY TYPE DESIGNATIONS, MILITARY STANDARDS, AND QUALIFIED PRODUCTS LISTS

The Federal Supply Code for Manufacturers (FSCM) assigned to United Transformer Co., Div. of TRW is No. 80223

UTC military products are made to the requirements of either MIL-T-27 (transformers and inductors), MIL-F-18327 (electric wave filters), or MIL-T-21038 (pulse transformers). The current revisions are MIL-T-27C, MIL-F-18327C, and MIL-T-21038C. Each of these specifications makes use of its own MIL Type Designation, which is essentially a shorthand description of the item. However, the MIL Type Designation will not fully describe an item without a statement of its electrical characteristics and, where necessary, a dimensional drawing. Therefore, for ordering purposes, you must specify the UTC Part Number in addition to the Type Designation. A condensed outline of MIL Type Designations is presented here for your reference.

Two of these specifications, MIL-T-27 and MIL-F-18327, have supplementary documents describing Military Standards. In these cases the Type Designation is suffixed with a three-digit number. This ties the MIL Type Designation down to a specific MS drawing. In these cases the MIL Type Designation may be used as the part number in ordering.

Each of these three specifications contains a requirement for qualification and a procedure for obtaining qualification by reason of similarity to a qualified part. All parts qualified to each specification appear on the appropriate Qualified Prod-

ucts List, e.g. QPL-27, QPL-18327, QPL-21038. If a desired item does not appear on the QPL, it still may be qualified by similarity, provided the manufacturer has an acceptable similar part qualified. Determining factors considered in extension of qualification are many and complex. This information can be obtained from the manufacturer. Obviously, a manufacturer with an extensive listing on the QPL is in a far better position to save the user time and high test costs than one with no listings, or with only a few parts listed.

It's a FACT that UTC has more products listed on the QPL* than all other manufacturers combined — exactly 53.73% of all transformers, inductors, and filters.

Copies of the specifications and Qualified Products Lists mentioned above may be obtained by manufacturers from:

U.S. Navy, Naval Publications and Forms Center, 5801 Tabor Avenue, Philadelphia, Pa. 19120.

* Reference to the total items listed on Qualified Products Lists: (1) MIL-T-27, QPL-27-48 (transformers and inductors — audio, power, and pulse); (2) MIL-F-18327, QPL-18327-20 (filters: high pass, low pass, band pass, band suppression, and dual functioning); (3) MIL-T-21038, QPL-21038-13 (transformers, pulse, low power).

MIL-F-18327C

MILITARY SPECIFICATION FOR FILTERS

(High Pass, Low Pass, Band Pass, Band Suppression and Dual Functioning)

EXAMPLE OF MILITARY TYPE DESIGNATION

FR	4	R	X	11	YY	1
Component	Grade	Class	Life Expectancy	Family	Case or envelope size and mounting	Composition
Filter		Indicative of max. operating temperature e.g., Q = 85°C R = 105°C	Designer's estimate of mean anticipated life e.g., X = 10,000 hrs. est.		Two letter code listed in spec e.g., FA = 2 5/16 x 2 1/16 x 3 1/8" Stud threads, heights and tolerances must conform to spec. YY = non std. metal case ZZ = encapsulated or molded	
4 — Metal Cased 10-55 Hz Vibration Frequency Range				Refers to application e.g.,		1 — LC
5 — Encapsulated 10-55 Hz Vibration Frequency Range				11 = Low Pass		2 — Crystal
6 — Metal Cased 10-2000 Hz Vibration Frequency Range				22 = Band Pass		3 — Other
7 — Encapsulated 10-2000 Hz Vibration Frequency Range				33 = High Pass		electromechanical

MIL-T-27C**MILITARY SPECIFICATION FOR TRANSFORMERS
AND INDUCTORS (AUDIO & POWER)****EXAMPLE OF MILITARY TYPE DESIGNATION**

TF	4	R	X	01	FA
Component	Grade	Class	Life Expectancy	Family	Case or envelope size and mounting
All MIL-T-27C transformers or inductors		Indicative of max. operating temp. (ambient plus temp. rise) e.g., R = 105°C S = 130°C		Two digit number code listed in spec. representing each application or category of transformers and inductors.	Two letter code listed in spec e.g., FA = $2\frac{5}{16} \times 2\frac{1}{16} \times 3\frac{1}{8}$ ". Stud threads, heights and tolerances must conform to spec. YY = non-std. metal case. ZZ = encapsulated or molded.
Refers to case material and environmental capability e.g., Grade 4 = Metal cased. Max. reliability. Resistant to shock, vibration and thermal shock Grade 5 = Same as Grade 4 except encapsulated or molded.	Refers to case material and environmental capability e.g., Grade 4 = Metal cased. Max. reliability. Resistant to shock, vibration and thermal shock Grade 5 = Same as Grade 4 except encapsulated or molded.	Designer's estimate of mean anticipated life e.g., X = 10,000 hrs. est.			

MIL-T-21038C**MILITARY SPECIFICATION FOR PULSE TRANSFORMERS****EXAMPLE OF MILITARY TYPE DESIGNATION**

TP	6	R	X	1100	B	C
Component	Grade	Class	Life Expectancy	Turns Ratio	Case Style	Case Dimensions
Transformer, pulse		Indicative of max. operating temp. (ambient plus temp. rise) e.g., R = 105°C S = 130°C			One letter code representing fixed case styles in spec e.g., A = radial leads. C = terminations at one end.	One letter code representing fixed envelope dimensions. Z = other sizes.
Refers to case material and environmental capability e.g., Grade 6 = Metal cased. Max. reliability. Resistant to shock, vibration and thermal shock. For use at high altitudes if required. Grade 7 = Same as Grade 6 except encapsulated or molded.	Refers to case material and environmental capability e.g., Grade 6 = Metal cased. Max. reliability. Resistant to shock, vibration and thermal shock. For use at high altitudes if required. Grade 7 = Same as Grade 6 except encapsulated or molded.	Designer's estimate of mean anticipated life e.g., X = 10,000 hrs. est.		Four digit code indicating the number of wdg's and their ratios e.g., 1110 = 1:1:1
